WINAMAC INDIANA

Feb. 2, 1909

Bruner Mfg. Co.,
601-611 So. St. Paul St.,
Indianapolis, Ind.

Gentlemen,— I have been trying for some time to find time to write you about your "MOTHER HOVER", but as you possibly know, I have been kept very busy this season judging at shows all over the country. In now back at the farm, however, and am getting things lined up for a big year in my White Wyandottes.

In your MOTHER HOVER, you certainly have a great machine, in fact you have surpassed the old hen as a mother in every way; as chicks which I placed under these Hovers last year actually grew faster and did better than chicks from the same hatch placed with hens. It strikes me that in this machine you have left nothing that could be desired. A long suffering poultry public will certainly appreciate a really good brooder, and all you have to do is to let them know what you have.

I will want more Hovers and brooders in a few weeks, as I am building a brooder house to accommodate Mother Hovers especially. I will gladly recommend your machine whenever I can.

Wishing you the success you deserve, I am,

Yours very truly,

Chas. V. Keeler
Judge and Breeder.

USE THE BRUNER LINE OF BROODING DEVICES

Not an Experiment
—But a Development

WE are convincing them all that at last there is a brooder that will brood your chicks—and as **IT IS THE CHICKS YOU RAISE THAT COUNT**, you will find it will pay to brood—**The Bruner Way.**

We have machines for everyone, whether you raise chicks by the dozen or by the thousands—and

HERE'S THE HEART OF ALL BRUNER BROODERS

**THE
MOTHER
HOVER**

is adaptable
to almost
any conditions.

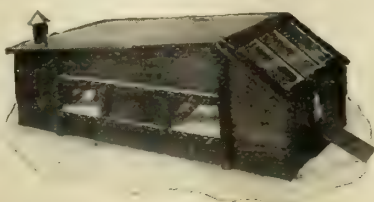

**THE
MOTHER
HOVER**

also sold alone—
just one or
one hundred.

FREE Get in touch with us—write us your brooder troubles—we will help you. **FREE**
Upon request, we will mail you a book **THE BROODING PROBLEM—SOLVED.**

**THE
BRUNER
OUT-DOOR
BROODER**

Write for ideas how to build brooders using the Mother Hover as the Heart, and ask for description of any of the following Bruner Line:—

Send Post Office orders on St. Louis and have your orders booked early. Fine Eggs by the 100, \$2.50 each. **W. F. CHAMBERLAIN, (The Perfect Chick Feed Man)**
KIRKWOOD, St. Louis County, MO.

Makes Chicks Grow

2 lbs. at 7 weeks

"Have fed Lee's Egg Maker and Chick Grower to my little chicks for a number of years, always giving it to them after they were three weeks old, and when they are seven weeks old have them weighing two pounds each and they are only scrubs. It is also a great feed for laying hens. I would not think of raising poultry without it."

JAS. E. MCGIE,
Easton, Kansas

Don't overlook the important part of chick feeding—to keep them healthy, make bone and muscle, and bring them to maturity at the earliest possible moment. Lee's Egg Maker and Chick Grower contains those elements in proper proportion that insure this result.

Lee's Egg Maker

and Chick Grower can be profitably fed every month in the year, to the exclusion of all other forms of meat food, at less feeding cost and with better results from every standpoint. We offer it on that guarantee.

Of equal value as a food for little chicks, for all penned-up poultry, and for the laying stock.

Fifty feeds for one cent proves its low feeding cost; our Guaranty proves its great value.

2½ lb. 25c; 25 lb. \$2.00; 100 lb. \$6.50

Barred Plymouth Rock Bantams: All to W. M. Shaylor, Lee.

F. S. Hawn, Youngstown, Ohio, twelve years a breeder of White Wyandottes, who is now secretary of the National White Wyandotte Club, was a prominent winner in a hot class of 142 birds at the recent Youngstown show. He won the

coveted Morris Hardware Cup for best display, all varieties competing. This cup is a large and gorgeous one, and as this is the third time Mr. Hawn has won it now remains his property. Mr. Hawn has been winning for many years at the large shows and has furnished winners in large shows, both east and west. Mr. Hawn showed one of the finest pullets we have seen this year. He has stock for sale and pens mated for the egg trade and his prices are reasonable. Look up his ad in this issue.

T. K. Martin, Chicago, Ohio, who breeds the noted Piser Strain of Buff Wyandottes, made a nice winning at Cleveland, Ohio, getting four prizes, including 1st pen on six entries. Mr. Martin has been breeding Buff Wyandottes exclusively for the past five years and winning at a large number of shows, always getting the "lion's share." He certainly knows Buff color and shape when it comes to Wyandottes and will please you if you send him your order. See his ad in this issue.

Simpson-Eddystone**Zephyrette Gingham**

Remarkably durable new dress gingham of great beauty, fine fabric and absolutely fast colors. These results are obtained by our scientific new process which marks a decided advance in the making of stylish and economical dress gingham.

New Process Dress Gingham

ABSOLUTELY FREE to any one answering this advertisement at once & enclosing 10c. silver or stamps to help pay boxing, packing, mailing, etc. Address.

THE AMERICAN SOAP WORKS, 95 Chambers St., N. Y. City.

THE NEW CHICKIES.

(Written for the American Poultry Journal.)

Old Mother Hen grows "fussy"
As she struts her way around,
And she gets a deal excited
At the slightest little sound.
"Cluck-cluck-cluck" you'll hear her clamor,
Then a dozen heads appear:
Yellow, white and black—her children—
They are total strangers here.

At dawn they all go roaming
In the big lot for a meal;
Little, wobbly youngsters, searching
For a bit the weeds conceal.
Such a busy, nervous scurry,
Over, under, out and back.
While old Mother Hen, delighted,
Keeps forever on their track.

What a host of mites to nourish.
What a brood to watch and raise;
Mamma Hen must needs be patient
For a bunch of busy days.
Fluffy balls of glowing yellow,
Others white as driven snow,
Black and spotted chicks her portion,
On the rural ways they go.

So it is with other mothers,
Wee ones busy at their heels;
Cookies, crullers, milk and candy
In an endless round of meals.
But the instinct is a blessing,
Through a world of baby tricks,
Be it tots who chirp for "Mother,"
Or our wordless little chicks.

W. Livingston Larned.

BARRED MINORCAS.

At the late Madison Square Garden show there was exhibited a pen of Barred Minorcas which attracted a great deal of attention, and especial interest was created when it became known that this pen had been sent all the way from California.

These birds were bred and exhibited by August Schwarz, Seeno Glen, Cal., who is spending a vast amount of money and time to introduce this new variety to the poultry-loving public of America. His ad will be found in this issue. Write him for full particulars and mention American Poultry Journal.

A. W. Blanchard, Beloit, Wis., breeder of Rose Comb Rhode Island Reds, is producing some of the good ones, and at the late Rockford show won first and second cocks, fourth hen, fourth cockerel and second pen. Judge Hick, who passed upon his birds at the last Chicago show, writes: "I can conscientiously recommend your stock in the highest terms. Had your birds at Chicago been more fully matured you would have come in considerable stronger in the ribbons." Judge Rountree, of Nora, Ill., who visited his yards on December 10 and scored sixty of his birds, wrote: "I can cordially indorse your stock, and shall be glad to recommend it on all occasions. You have the best large bunch of Rose Comb Reds I have seen this season. You had one hen that I would be proud to own, and I see she won third at Chicago the next week." Better write him for prices and particulars and mention American Poultry Journal.

Attention is called to the ad of Dr. M. Lee-Smith, of Watertown, N. Y., who has won an enviable reputation this season with his S. C. Rhode Island Reds. They demonstrated their fine quality by winning at the following shows: Jefferson county, Potsdam, Bath, Warsaw, Albion, N. Y.; Bloomsburg, Pa.; White River Junction, Vt. At Utica, where there were 108 S. C. Reds shown, on two entries he won 3d and 4th cockerel and two specials. Personal attention given to inquiries.

Peter S. Hurt, Thorntown, Ind., breeder of S. C. Buff Leghorns, won as follows at the late Indianapolis show: In a class of fifty-five—W. C. Pierce, judge—1st and 2d pen, 1st and 5th cock, 2d hen, 2d and 4th cockerel; 2d pullet; silver cup for best display; American Buff Leghorn cup for best cock, hen, cockerel, pullet and pen; special for best shaped and best colored male and best shaped female.

75c Pays for one year's subscription to American Poultry Journal and five years' subscription to Farm-Journal. Each subscriber will also receive a copy of the Lincoln Farm Almanac for 1909. See ad elsewhere in this issue.

Grand S. C. W. Leghorns

FIRST LESSONS IN POULTRY KEEPING

We may safely claim that never before in the history of poultry literature has any publication so thoroughly and systematically handled the subject of proper poultry keeping. Beginning with the elementaries—the very first principles—the student has been taken along step by step, each lesson followed by the next in its logical order. This policy of "begin at the beginning" enables the laying of a solid foundation of useful knowledge, the necessity and value of which for future success, cannot be overestimated. The following list, a complete "lesson" being devoted to each subject, will help you to form some idea of its great value.

- Winter Rations for Laying Stock.
- The "Hows" and "Whys" of Feeding Laying Stock in Winter.
- General Principles and Rules for Poultry Breeders.
- Putting Principles of Breeding into Practice.
- Hatching Chicks With Hens.
- Rearing Chicks With Hens.
- The Care of Chicks from Weaning to Maturity.
- Points to be Considered in Poultry House Construction.
- Two Plain Cheap Poultry Houses of Simple Construction.
- Five Good Small Poultry Houses.
- Summer Management of Fowls.
- Continuous Poultry Houses.
- Incubator Rooms and Brooder Houses.
- Simple or So-Called Scientific Poultry Feeding.
- Poultry House Fixtures.
- Poultry Fences and Yards.
- Getting Ready for Winter.
- Selecting and Fitting Exhibition Birds.
- Fattening Fowls.
- Selling Market Poultry and Eggs.
- Selling Thoroughbred Poultry and Eggs.

The price of the book alone is 50c, postage prepaid, but note our great SPECIAL OFFER of a yearly subscription to Farm-Poultry, the great National poultry paper, and a copy of "First Lessons in Poultry Keeping" for only 75 cents. (Price to Canada, 90 cents) : : :

This offer is made you strictly on approval. If for any reason you are dissatisfied return the book in good condition and your money will immediately be refunded without any comment whatsoever. We know that you would not part with this book for ten times its cost if another copy was not procurable. We can hardly conceive of anyone overlooking this opportunity who desires practical, thorough, systematic and dependable instruction on poultry keeping. To obtain the benefit of this splendid combination you must send orders and remittance to

FARM-POULTRY PUB. CO. :: Room A, BOSTON, MASS.

HOW OFTEN WE HEAR THE REMARK

**"Kellerstrass"
White Orpingtons**

Are the Highest Priced Chickens in the World

Read the following testimonials—we have thousands of them on file in our office—then send for our Catalogue; read it through and you will know why "Kellerstrass BIG EGG LAYERS" bring the highest prices of any chickens in the world

Fifteen Chicks from Fifteen Eggs.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I write this to let you know the wonderful hatch I had from the setting of eggs I bought from you on the 12th of April last. Well, sir, I GOT FIFTEEN

Still Have Twenty-One Left.

Mr. Kellerstrass,
Kansas City, Mo.

Dear Sir:—As I got two settings of eggs from you this spring I thought I would let you know about them. Out of one setting I had ELEVEN and out of the other TWELVE little chicks. It is about two months since they were hatched and I STILL HAVE TWENTY-ONE LEFT. One of the others was killed by accident. I think that was good for shipping so far. I am well pleased with them. I hope I can raise the rest now. Respectfully yours,
FRANK BAYER,
Dodge, Neb., 6-11-08.

Fourteen Out of Fifteen on Time.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—Last evening, "on time," I found FOURTEEN (14) CHICKS FROM

set them Monday, the 30th, and got a hatching of TWELVE LITTLE CHICKENS FROM FOURTEEN EGGS, one of the eggs being cracked; it had been done in the nest, as they showed no signs of damage in any way. The CHICKS ARE VERY SPRY AND NICE, and I am well pleased with the looks of them, and I am sure I will have the "WHITEST" chickens in this part of the country, as there are no Crystal White Orpingtons in this part of the country that I know of. I thank you for your honest dealing, and will want eggs from better mating the next time I order.

Yours truly,
LEWIS B. TRUSSELL,
Crothers, Pa.

Hatched Twenty-four.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—I make the following report: From yard 30, two settings, thirty eggs, all in good condition, received March

**VIEW ON THE KELLERSTRASS FARM KANSAS, CITY MISSOURI.**

CHICKS OUT OF THE FIFTEEN EGGS and have fourteen living today, the 29th, and they are fine.

I have bought lots of eggs from the different people, but I must say that you are THE MOST HONEST IN ALL THE LOT.
HARRY ARMSTRONG,
Mystic, Iowa, 5-29-08.

Got Eleven Chicks.

Mr. Kellerstrass,
Kansas City, Mo.

Dear Sir:—Would say that I received my setting of eggs in good shape and took pains to pick out one of my best hens to set them under. I made her a nest in front yard; she set fine; never broke an egg, but I got ELEVEN CHICKS. The other four eggs were not hatched, or had been spoiled in shipping, for they had not started to hatch, so I think the old hen done her part.

Yours for Orpingtons,
R. C. BETZER,
Huckman, Neb., 5-28-08.

THE FIFTEEN EGGS PURCHASED FROM YOU. The fifteenth egg was not fertile, otherwise would have had fifteen White Orpingtons.

Yours truly,
D. J. HUTCHINSON,
South Pasadena, Cal., June 15th, 1908.

Eleven Fine Strong Chicks.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Feel it my duty to report the result. On May 12th I had a hatch of ELEVEN (11) STRONG CHICKS from your eggs, and they are all doing splendidly so far.

Yours respectfully,
ROBERT O. JONES,
Lannon, Wis., 5-28-08.

Twelve Hatched.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—I received the eggs I ordered from you Saturday, March 28th, and

23d, 1908, set March 24th, under one black hen and one red hen. The black hen broke one egg in nest and HATCHED FOURTEEN CHICKS OUT OF THE FOURTEEN EGGS. The red hen HATCHED TWELVE CHICKS OUT OF HER FIFTEEN EGGS, but another hen killed two and one died in the nest; one egg was infertile and the other had a dead chick in it. So we took off twenty-four nice, fine chicks and have them all yet. They are all we expected, "just splendid," and we are greatly pleased.

Yours truly,
A. ODELL,
Pond Creek, Okla., 6-1-08.

Hatched Twelve Fine Chickens.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—HATCHED TWELVE FINE CHICKENS out of setting of eggs from you and they are beauties. Am going to try to raise all of them if care will do it.

Yours truly,
W. F. GERHART,
Pocahontas, Iowa, 5-29-08.

Twelve Chicks, as Fine as Can Be.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—Received the Orpington eggs in due time and set them under two hens. From the setting of fifteen we got **TWELVE LITTLE CHICKS AS FINE AS CAN BE**, all in good condition, and we are well pleased with the hatch.

Thanking you for past favors, I remain
Yours truly,

R. D. HALL,
Lyons, Kans., 6-9-08.

Every One of the Fifteen Hatched.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—The setting of hens I got from you hatched out this week, Wednesday, and to my delight and surprise **EVERY ONE OF THE FIFTEEN HATCHED**. **THEY ARE A FINE BUNCH**. The weather

Will you have any eggs at reduced prices after hatching season is over?

Very truly,
JAS. E. CUMMINS,
Kenwood Park, Iowa, 5-18-08.

Fifteen Hatched.

Kellerstrass Poultry Farm,
Kansas City, Mo.

Gentlemen:—We received the two settings of eggs O. K., and placed them under two hens. One hen hatched out **FIFTEEN CHICKS**, and the other **HATCHED ELEVEN**. There were only four infertile eggs in the thirty. Respectfully yours,

JAMES MARSH,
Greenwich, Conn., 5-15-08.

Fourteen Hatched; Doing Fine.

Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I would have had **FOURTEEN** of your Crystal White Orpingtons if the

and I have hatched **ELEVEN NICE CHICKS**, but the bad weather killed five of them. Do they feather out rapidly or not? Can I expect any show birds from what I raise or will it be at all unlikely for me to get any? What points do they have to carry them to 93 or 94 score? If not taxing you too much, give me the points, as I am a new beginner with the Orpingtons. Yours respectfully,

B. G. LEE,
Cochran, Ga., 5-17-08.

Fourteen and Twelve Hatched.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I have been intending to write to you telling you what good luck I had with the two settings of eggs I bought from you, but I have been very busy and sick on the side. I have **FOURTEEN CRYSTAL WHITE ORPINGTONS** out of the first setting and **TWELVE OUT OF THE SECOND**. I think that is just fine.

U. S. A. WHERE THE CRYSTAL WHITE ORPINGTONS WERE ORIGINATED

for the past three weeks has been as bad as possibly could be for hens setting, but my sister took the best care of the hen all the time, with good results, and I feel proud of the lot of chicks. Yours truly,

W. E. MAST,
Burlington, Iowa, 6-5-08.

**Shipped 325 Miles—Moved Three Times
—Hatched Fourteen Out of
Fifteen.**

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I write to inform you that I got **FOURTEEN LIVELY WHITE ORPINGTONS FROM THE FIFTEEN EGGS** I ordered from you on April 16th. All are lively and doing finely. They began hatching last Thursday. I consider the hatch remarkable, as they were shipped 325 miles in the first place, and they were moved three different times after incubation began on account of difficulty in getting hens to properly attend them. The eggs seem to have remarkable vitality as well as fertility.

rats had not killed one of them. **THEY ARE DOING FINE**. I hope I can raise them. How do you sell eggs in August and September?

Yours truly,
MRS. GEO. KIRCHNER,
Donnellson, Iowa, 6-14-08.

Twelve Healthy, Strong, Chicks.

Mr. E. Kellerstrass,
Kansas City, Mo.

Dear Sir:—I have received one setting of eggs and got **TWELVE HEALTHY AND STRONG CHICKENS** out of the fourteen eggs; one egg was broken when we received them. The little chicks are now about ten days old, and every one is growing and as healthy as I have ever seen any.

Yours truly,
DR. A. W. GRUEBBEL,
Concordia, Mo., 5-26-08.

Eleven Nice Chicks.

Ernest Kellerstrass.

My Dear Sir:—Your eggs came all right

The **CHICKS ARE JUST AS LIVELY AND STRONG AS ANY I EVER SAW**, and no doubt will make me a flock of good, No. 1 birds.

I wish to thank you for your kindness and courtesies, and wish you the continued success of selling fine chickens.

Yours very respectfully,
GUY COLEMAN,
Platte City, Mo., 5-22-08.

Twelve Chicks Hatched.

Ernest Kellerstrass, Esq.,
Kansas City, Mo.

Dear Sir:—I take pleasure in informing you that the last setting of eggs you sent me I set under a hen and she hatched **TWELVE CHICKS**. Every fertile egg hatched. **THEY ARE ONE WEEK OLD TODAY AND ALL STRONG AND HEARTY**. **THEY ARE A NICE FLOCK FOR ONE HEN AND ARE ADMIRABLE BY EVERY ONE WHO HAS SEEN THEM**.

Yours truly,
M. E. JORDAN,
Lyons, Iowa, 7-28-08.

S. C. Rhode Island Reds

The best that years of line breeding upon scientific principles can produce. At the great Chicago show on two entries I won first on cockerel and third on pullet. At Cleveland, Ohio, in a very strong class I won first on hen, first on pen, second, third and fourth on cockerel, second on pullet and fourth on cock, winning the State Cup offered by the Rhode Island Red Club of America for the best display. Some fine breeding and exhibition stock for sale. Eggs from special matings \$3.00, from utility \$1.50 a setting of 15.

GEO. L. BUELL

LORAIN, OHIO

MONEY IN EGGS.

Many articles appear in different papers descriptive of different kinds of egg preservers. You read of these preservers one year, and then hear of them no more. Why is that? There must be some reason for it. Did I hear you say there was one preserver whose advertisements you had read in this paper for four years, and who had been in the same business for five years? There is just such an egg preserver company—the Willett's Water Glass Egg Preserver Company, Box 56, Anderson, Ind. They say there is money in eggs, and illustrate same by sending you literature free for the asking. Why not write them for particulars?

We wish to introduce to our readers Mr. S. A. Nofztger, of North Manchester, Ind., the originator of the Partridge Rock. Mr. Nofztger has spent ten years perfecting them, and the judges all pronounce his birds to be the best they have ever seen. We had seen Mr. Nofztger's birds in the show room on several occasions and were compelled to admire them, but we were greatly surprised on visiting his yards to find such quality and uniformity in the whole flock. Really, these birds, when it comes to good average quality, would put many an average breeder of some of the older varieties to shame. Mr. Nofztger after furnishing the winners for a number of big shows, east and west, still had plenty of quality left, and won at the Indianapolis State Fair, 1st and 2d cock; 1st, 2d and 3d cockerel; 2d pullet; 1st and 2d pens. At the Chicago show, 1st, 3d and 4th cock; 1st, 2d and 3d hen; 1st, 2d and 3d cockerel; 1st, 2d, 3d, 4th and 5th pullets; 1st pen. At Indianapolis State Show, 1909, won 1st, 2d and 3d cock; 2d and 5th hen; 1st, 2d and 4th cockerel; 1st, 2d, 4th and 5th pullet; 1st pen. Only three birds at Chicago that had been at the state fair and one at Indianapolis that had been at either of the other shows. This proves he has plenty of show birds. He has twelve grand pens mated to produce more winners, and he knows how to do it. His mating list is ready. You should send for it. His ad is to be found in this issue.

This is indeed the catalogue season, and not the least among them is the attractive little booklet called "1909 Pocketbook of Pointers," published annually by the O. K. Stock Food Company, of Chicago, Ill. It contains not only an array of information on the value and merits of their goods, but an interesting article on "Modern Poultry Problems," by D. J. Lambert, vice president of the company and instructor in poultry craft at the Rhode Island College of Agriculture and Mechanic Arts. The booklet is a little encyclopedia of progress and up-to-date knowledge, with suggestions and plans for each month in the poultry year, and, we understand, will be mailed to anyone for 2-cent stamp.

M. L. Chapman, the well known White Rock specialist, writes us that hereafter his office address will be Wethersfield, Conn. This is not a change in location of the plant, but is simply taking the office to the farm for greater convenience. He reports a fine business this winter and has recently shipped two trios to one of Australia's leading poultrymen, Mr. T. H. Grant, Pakenham, Australia. At the Hartford show, 1909, Mr. Chapman won five firsts and all the specials. His mating list is free.

We wish to call attention to the ad of Mr. L. Rutherford, Watertown, N. Y., Box 181, proprietor of Pleasant View Stock Farm, who breeds several of the most popular varieties of poultry. Mr. Rutherford is also a successful breeder of Oxford Down, Shropshire and Leicester Sheep, that have won many prizes in this country and Canada. Also good producing Holstein Cattle. Visitors are always welcome at Pleasant View Farm.

The 1909 illustrated mating list of the Blue Ribbon strain of White Orpingtons has been received from E. S. Bullington, Richmond, Va. Mr. Bullington with this issue starts his third year advertising in the American Poultry Journal, and states his 1908 inquiries were more from the American than all other papers combined. His White Orpingtons have been winners at leading shows in the country.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses—A 64-page book on poultry house construction.

Mica-Crystal

The Grit That Make Hens Lay
Contains Mica, Iron, Magnesium and Quartz, each in its purest and best form. It is of such peculiar formation that it will

not take a polish as is the case with grit made from white quartz or marble, and unlike limestone grit, or grit of like soluble substance, is not dissolved by the fluid, in the crop, consequently it never loses its sharpness. It sharpens itself by contact, the only grit that does, and therefore excels all others as a grinder. Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Grit is to the fowl what teeth are to other members of animal creation. The standard for 15 years. Will send you small sample by mail if desired. Manufactured only by

MICA CRYSTAL CO.

\$100.00

ONE HUNDRED DOLLARS IN CASH PRIZES

\$100.00

Given to the following named users of the Golden Rule Incubators for the season of 1908

Mrs. Rosa E. Combs, Greenville, Ohio; 244 fertile eggs, 236 chicks, 3 hatches 96.7 per cent **\$15.00**
George E. Craig, Shirley, Ind.; 600 eggs, 574 chicks 3 hatches, 95.6 per cent **\$15.00**
R. I. Parton, Judson, Ind.; 490 eggs, 465 chicks 94.9 per cent **\$15.00**
Mrs. L. P. Wells, Kevil, Ky.; 379 fertile eggs, 359 chicks, 3 hatches, 94.72 per cent **\$10.00**
Chas. W. Palmer, Mechanicsburg, Ind.; 530 fertile eggs 494 chicks, 3 hatches, 93.2 per cent **\$10.00**
John W. Miller, Middletown, Ind.; 416 fertile eggs, 382 chicks, 3 hatches, 91.3 per cent **\$10.00**
Charles Zirkle, Middletown, Ind.; 568 fertile eggs, 519 chicks in 3 hatches, 91.4 per cent **\$5.00**
Luther McCormack, Mechanicsburg, Ind.; 464 fertile eggs, 415 chicks in 3 hatches, 89.4 per cent **\$5.00**
J. J. Miller, Hartford City, Ind.; 456 eggs, fertile 404 chicks in three hatches, 88.6 per cent **\$5.00**

Albert Maddy, Cadiz, Ind.; 510 fertile eggs, 440 chicks in 3 hatches, 87 per cent **\$5.00**
Mrs. Lois E. Lodge, Middleton, Ind.; 353 fertile eggs, 303 chicks in 3 hatches, 86 per cent **\$5.00**
Total 5000 fertile eggs and 4591 chicks in 33 hatches by eleven different operators, giving an average of 92 per cent. \$100.00 will be paid for any incubator that will bring out an equal number of chicks from any given number of eggs with the same expenditure of money, time and labor. The Golden Rule is no "dude," so never smokes, therefore no need of an automatic smoke and fire extinguisher. Neither is a hygrometer or moisture gauge necessary for this is all provided for. These machines have no superior as a hatcher at any price, and with reasonable care will last for 20 years. Price of 200 egg size only \$10.50 delivered at your station freight prepaid. Other sizes at corresponding rates. Send for catalogue.

GOLDEN RULE INCUBATOR CO.

MIDDLETOWN, IND

THE CHAMPION BROODER DOWN TO The Ground

Chicks run out directly on the ground, no platform to climb, no legs to break off. It's "the top notcher" in brooders. Used either out-doors or in-doors winter and summer; no need of expensive brooder houses if you use the Champion. Over 100,000 in use. Everybody delighted and "how they do talk" about them: "I will replace my high priced brooders with Champions." "I have used my Champion for six years and have raised hundreds of chicks in it. It's the best ever." "It beats them 'em all hollow, etc." New safety. No-chimney lamp. Absolute safety from explosion and fire. Largest in size, lowest in price. Only \$6.50. Catalog free.

THE BANTA

The Banta Incubator and The Banta Brooder were invented by a man who made a business of hatching broilers. He made a pronounced success with his own inventions.

Fifteen years ago he put **The Banta** on the market. It has done for others what it did for him. It was practical, and it made no difference about previous experience—successful hatches always came out when simple instructions were followed.

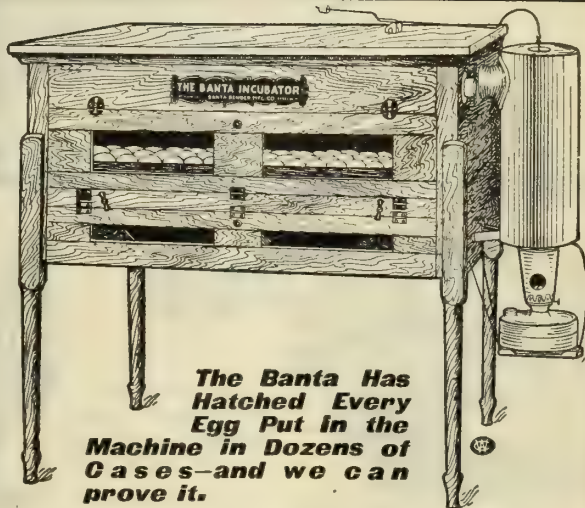

"Early Chicks"

The Banta has hatched as high as 100 percent of the eggs, and its average hatching percent is above the average hatching percent of other makes.

When you get The Banta Incubator and The Banta Brooder you get the result of a practical and successful poultryman. You get his experience, and he makes your success sure and immediate. The subject of "Early Chicks" is treated in an exhaustive manner in Bulletin No. 10. It is free on request, and we want your request. It will give you a lot of good points that are worth knowing.

The Banta Incubator and The Banta Brooder will put you where you can get top prices for your broilers. You work to profit—why not work for a greater profit? We will help you.

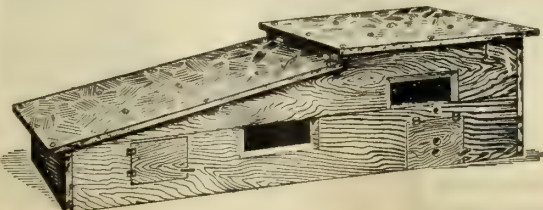

The BANTA-BENDER CO.
Dept. 10, Ligonier, Indiana

The Banta Has Hatched Every Egg Put in the Machine in Dozens of Cases—and we can prove it.

How to Feed for Eggs The Diseases of Poultry Poultry House Drawings and How to Build Them

Giving complete instructions for operating Incubators and Brooders. The Feeding and Care of Poultry. This valuable book is published by Mr. L. A. Banta who has had 15 years of actual and successful experience in the poultry business. Price, 50 cents. A copy free with an Incubator or a Brooder.

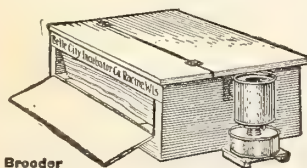

\$7.55 Buys the Best 140-Egg Incubator Ever Made

CYPHERS POULTRY FOODS

PROTECTED BY SEAL

SCIENTIFICALLY
BALANCED RATIONS

The Greatest Success in Poultry-Keeping Is Secured By Aiming Constantly Higher and Higher

The Best Foods Produce the Best Fowls that sell for the highest prices. Screenings won't do it! Inferior grains won't do it! A pile of wheat today; a pile of corn tomorrow—an indiscriminate feeding of grain without a knowledge of cause and effect will not accomplish it. Blood alone won't do it, even though the ancestry may be traceable for generations.

There Is No More Important Consideration Than The Food You Feed!

And while for your profit we don't want you to miss getting the Best Foods, neither do we wish you to take it for granted without investigation that

Cyphers Company's Foods Are The Best

We know that the closer you investigate the nearer you are to buying our Foods

For the following reasons we repeat that Cyphers Company Poultry Foods are the Best:

1. THE members of the Company are leaders in the poultry business—experienced exhibitors and market poultrymen who know the needs of poultry. See page 7 of our new catalogue.
2. OUR mill is devoted exclusively to the mixing and grinding of poultry foods—no breakfast foods, no stock foods, no waste products. We operate the largest exclusive poultry food mill in the world—all for poultry.
3. OUR foods are scientifically mixed and balanced by automatic machinery that cannot go wrong once the proportions are adjusted—and we readjust them for every different ration.
4. EVERY Sack of Food is Sealed. Whether you buy direct or through one of our agents see that the Seal on the bag is unbroken. Our foods are too valuable to take chances of adulteration.
5. WE make a special food for every purpose: Chick Food for Chicks; Laying Food for Layers, etc., etc., every one balanced to meet requirements whether for forcing birds for market or for show, for laying, or for growth.
6. CYPHERS Incubator Company's guaranteed analysis is on every bag. Cyphers Incubator Company stands behind it, and the individual members of Cyphers Incubator Company recommend its use for best results. The leading fanciers recommend it as will be seen by reference to our Free Catalogue.

The Best Foods Produce the Best Fowls—For Show, for Market and for Laying. Therefore it is wise to buy the best. The following is our list of balanced Poultry Foods—all superior and as low priced as we can make them:

CYPHERS CHICK FOOD
CYPHERS SCRATCHING FOOD
CYPHERS DEVELOPING FOOD
CYPHERS FORCING FOOD
CYPHERS LAYING FOOD

CYPHERS PIGEON FOOD
CYPHERS SHORT-CUT ALFALFA
CYPHERS SHREDDED ALFALFA
CYPHERS MEALD ALFALFA

Our Free 212-Page Catalog gives you full information about our Kansas City Mill and tells about the composition of all the above Poultry Foods. It contains photographs of superior, standard-bred fowls; prize winners of America's big shows; over seventy pictures of the World's Biggest Poultry and Duck Farms and Experiment Stations; tells about our new Fire-Proofed Insurable Incubators; our Electric Hatchers and Mammoth Incubators. Write today for this Big Book.

BROMO-SELTZER

CURES
HEADACHES

10¢, 25¢, 50¢, & \$1.00 Bottles.

FEED - 10 CENTS PER BUSHEL

Is your main feed for growing chicks and making eggs costing you more than 10 cents to 15 cents per bushel? Do you expect to raise 95% of all chicks hatched this season? Can you care for 2,000 layers and raise 3,000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how

I do it. My new book, "Profits In Poultry Keeping Solved," will tell you how to do it, as well as save you \$25.00 on every 100 chicks you raise to maturity. My third edition of 5,000 copies now ready. 2,000 breeders—W. Wyandottes and S. C. W. Leghorns—managed by my famous system. Eggs for hatching a specialty by the 100 or 1,000 lots at \$5.00 and \$6.00 per 100. No order too large. High grade baby chicks also supplied—particulars free. Send today for free circulars and testimonials. Address

EDGAR BRIGGS BOX A PLEASANT VALLEY, N. Y.

A NEW YORK WINNER

I WANT EVERY POULTRY RAISER TO WRITE FOR MY SPECIAL PROPOSITION

Get my offer on a Fairfield incubator or brooder before you buy any other make of machine. I will help you get an incubator or brooder free. Doesn't that sound interesting? I am making absolutely the fairest and most liberal offer ever made by any incubator manufacturer, to help introduce the Fairfield in every section of the United States. Just write me for my new illustrated catalog and I will mail you my special proposition at the same time. I want every poultry raiser to write me for this offer, because I can save you money on my incubator or brooder, and at the same time will give you the chance of getting your machine partly or entirely free. This is no soliciting, canvassing or agency offer, but a straight business proposition requiring about ten minutes of your time. I wouldn't make the offer under any conditions unless I knew I had an exceptional machine to back it up. Remember, I will leave it to you to say whether or not the Fairfield is the machine you want to buy. Write me today for my catalog and special offer.

SHIPPED
FREIGHT PREPAID

JUST A WORD TO CHICKEN 'RAISERS
Don't kill the goose that lays the golden egg by setting your hens to hatching. Buy an incubator this year. Let it hatch your chickens and keep your hens at their more profitable work of laying. My largest machine will do the hatching of 30 hens better and cheaper and it's a lot easier to watch.

FAIRFIELD INCUBATORS AND BROODERS ARE SOLD DIRECT FROM OUR FACTORY TO YOU AT A SAVING OF 30% TO 50%

I don't doubt but what you have been thinking of buying an incubator or brooder, perhaps both, for a long time. Probably you are hesitating simply to be sure you get the best machine for the money. Now, if that's the case, I say just try a Fairfield first. You can't make a mistake, for if the machine, under my liberal, iron-clad guarantee don't suit you, it won't cost you one cent.

I ship my incubators and brooders out on the plan that if you don't find them all that I claim for them or perfectly satisfactory, return them and I will refund your money and pay the freight both ways. This is the only fair way. But my machines are bound to please you. The steam and water forced circulation heating system, the most important part of an incubator is perfect in the Fairfield. I guarantee it. Remember, an incubator without a good heating system regardless of other fine points is absolutely worthless. It simply can't hatch.

The Fairfield will hatch every hatchable egg. It's better made than any other incubator on the market. Try one and prove this for yourself. Our regulator could not be improved—works automatically and keeps the temperature always at hatching point. Box is made of California redwood throughout, beautiful in finish, makes a fine parlor table. Another important feature is our non-explosive lamp. We have never had nor heard of an accident with a Fairfield Lamp, with thousands in use everywhere.

Our brooders will make good hen mothers for the chicks which a Fairfield will hatch. They are well built, simple, cheap, and can be set out in the open air. We guarantee our brooders and ship them out on the same liberal offer made on our incubators. You need both machines and, remember, my new plan will help you get them very easily and very cheaply. Write for my catalog and special offer today sure.

S. C. Thompson, Manager, Nebraska Incubator Company,
217 MAIN STREET, FAIRFIELD, NEBRASKA.

Remember they are shipped FREIGHT PREPAID to any point in U. S. and Guaranteed.

Get Our New Catalog Today.

WHY PLANTS SOMETIMES FAIL.

Careless handling at either or both ends of the route, when they come long distances from nurseries, is the main reason for plants sometimes failing to grow. It is very easy to lay it all to the nurseryman's door, but often it is quite as much the fault of the planter as of the nurseryman. One thing is certain, and that is that nurserymen who handle plants have had more experience and ought to know more about handling them than the average planter. Then, too, it is to the nurseryman's interest to have plants live and grow, because on the success of a shipment depends his future sales, even if he did not care about the matter in any other way.

Plants, to do well, must be lifted from the nursery rows at opportune times, whether it be the time of the year or the condition of the weather. If dug when they are dormant, they have much better chance of living than when the tops are large and heavy with foliage. If dug when the weather is cool and moist, with little wind or sunshine, they have a better chance of living and doing well than when there are heavy driving winds blowing or the sun beats down on them red hot. However the plants are dug, they should be kept protected as much as possible from sun and winds. After they have been forked out of the soil, the surplus earth in the roots must be shaken out, the plants tied in bunches in the lot and thrown into wet sacks, or buried in the moist earth as fast as each bunch is made up. If plants are looked over, counted and bunched in a cool shed, they must be gathered up closely after the diggers and immediately carried to the shed. For this purpose close baskets are best, as the plants can be lain in straighter than when fumbled into sacks. If sacks are used to carry the plants loose, or the bunches of plants from the lot to the sheds, they should be dipped into a barrel of water before taking to the lot. It is best to use double sacks, one within the other, and wet the inside sack or both of them. The moisture evaporating from the sack keeps the plants cool as well as moist.

For packing plants nothing is better than light crates and market baskets. The plants are stood up one row deep in the baskets and moss put about the roots. When crates are used, narrow crates about one foot wide and holding, say, 1,000 to 2,500 plants each, should be selected. The plants can be put in double rows with roots interlacing, and tops exposed to the slats and air. Moss is placed in layers next to the box and between each layer of plants. Oiled paper should be put on the ends and bottom, wherever the plants would touch the wood, to prevent drying out of the moss. Wet sphagnum moss must be used if obtainable. Otherwise damp sawdust one or two years old is best for packing strawberry plants. The crates must be filled more than full and the cover crowded down, so that the plants will not shake about in the package when it is turned end over end. It is best to not put too many plants in one package, if the crate is large and bulky; the plants will settle in one end, and when the transportation companies handle these large packages the plants chug into one end and are much injured. Small light baskets and crates are best.

When plants are received by the customer, they should be got home as soon as possible and taken from the package. Don't stop and swap lies with your neighbor when you are taking home a shipment of strawberry plants. The package should be put under shade, preferably in a cool wood shed or cellar, and opened at once and the plants taken out and counted. If all are right, they should be set upright on the bottom of the room, with wet moss next to the roots, on the bottom and at the sides. If they are wilted it is a good plan to take each bunch and set it in a pail of water for a short time, long enough to take up moisture enough to revive the plants.

The plants can be left in this place and in this condition for some time, the length of time will depend upon the season, whether it is very early in spring or late, and also, the condition of the weather, whether it is quite warm or cool. If it is cool and early in the season they may be kept for two or three weeks in this condition. It is best to set them out as soon as possible, however, either permanently or in little trenches in the garden temporarily. However the plants are treated they must be always kept from frost, excessive sun and high driving cold winds. If the package of plants is frozen when it arrives it should be placed in a dark cool place, covered up,

and allowed to thaw gradually. Ordinarily it is not a good plan to pour water on the plants before they are removed from the package; but if frozen we recommend pouring water over them until thoroughly saturated and then allow them to thaw out gradually.

Failure with plants is almost always due to keeping them too long after they are received from the nursery before planting out, to exposure of the roots to heat, winds or frosts, or to putting them in a warm humid place where they will mold and spoil. The sooner the roots are gotten into the soil the better, and the less exposure they have to deleterious surroundings the surer the good results. Before you blame the nurseryman think well whether you have performed your part.

L. J. Farmer.
Pulaski, N. Y.

THE MILLWORK HEADQUARTERS OF AMERICA.

Iowa is the Millwork Headquarters of America. Here are located the mammoth mills that turn out windows, doors, mouldings and the thousand and one items required by the carpenter in constructing all classes of buildings.

The greatest millwork concern in America, and in fact in the entire world, is the Gordon-Van Tine Company.

Of tremendous importance to home owners, carpenters and contractors is the fact that this immense millwork plant sells its entire output direct to the consumer. This means a saving to the actual user of millwork of at least 50 per cent.

You can take a Gordon-Van Tine Millwork catalog and make up an order for whatever you need, with the positive assurance of saving half the retail dealer's price. The company guarantees all shipments.

All of our readers who are going to build or repair should write to Gordon-Van Tine Company, 000 Case St., Davenport, Iowa, and get a copy of their Grand Free Millwork Catalog. There are over 5,000 bargains, including everything that goes into a building above the foundation. We have no hesitancy in recommending this firm, as they have a capital of over \$250,000 and have a spotless record of fair dealing with their thousands of customers in all parts of the world.

Those who have been carefully watching the incubator problem for the last few years have been interested in the question of a standard-sized machine.

For the average poultry grower there should be an average incubator, one that would give the highest average of results, because that is the only thing that really counts.

It is the consensus of opinion that such

an incubator as the 125-egg-capacity Gem is the ideal machine. The Gem is mentioned, because it has been so favorably known for years, that poultry men everywhere are familiar with it.

In every detail of construction the Gem may be accepted as standardized, as all the features regarded as vital by experienced poultry raisers have been embodied in its construction, yet the price is extremely low.

Poultry men who are anxious to get on the right track and avoid expensive mistakes should take advantage of the free literature sent out by the Gem Incubator Company, from its office in Trotwood, O.

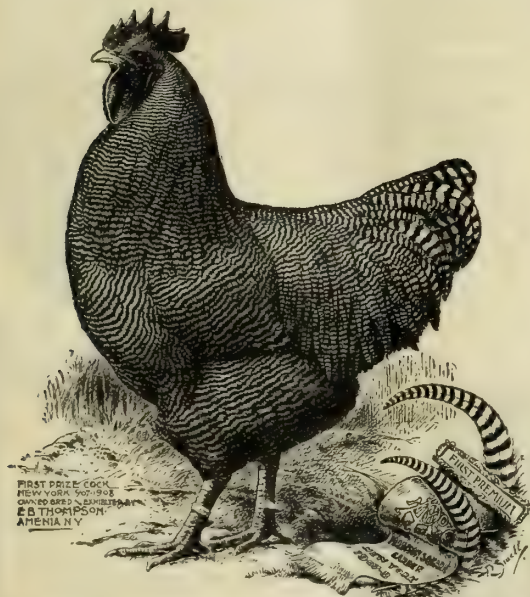

Miss Alice M. Hedges, of Pana, Ill., won at Pana Poultry Association, Pana, Ill., January 20 to 26, 1909, as follows: First and 2d cock; 2d, 3d and 4th cockerel; 1st, 2d and 3d pullet; 1st and 4th hen; 1st and 2d pen; also six specials, including one silver cup for best exhibit of any one breed. Ben. S. Myers, judge. Twenty-six in W. P. Rock class.

Anna L. Pinkerton, Lock Box 4, who will be remembered by a great many of our readers as the inventor of the famous Queen Incubator, is now offering something new to the public in the incubator line. Look up her ad in this issue and write her for full information, and mention American Poultry Journal.

The Peerless "Ringlets"

True to Their Tradition,

Are Again Great Winners at New York

"Ringlet" First Prize Cock at Madison Square Garden, New York, Winter of 1907-8

At the Imperial Madison Square Garden Show, December 29, 1908, to January 2, 1909,

E. B. Thompson's Barred Plymouth Rocks

win First and Third and Special Prizes on Exhibition Pens; second and special prize Cock; second and special prize Cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Silver Cup offered for best exhibition pen.

The race at this 1909 New York Show was a Marathon for speed and quality, and my First Prize Silver Cup Exhibition Pen was declared by expert opinion to be the finest ever exhibited---a paragon of perfection---and created a sensation as the finished achievement in modern Barred Rock breeding---unequalled in the annals of poultry shows. The sun never before shown on such a masterful exhibit.

The "Ringlets" are always imitated---but never equalled

They are first in record, first in quality, and
first in popularity

Their record at New York for 22 years is **GOLD LINED**
---it is a calendar of successive victories demonstrating step by step their irresistible advance towards the world's absolute leadership

"RINGLET" EGGS ARE THE BEST THAT MONEY CAN BUY; THEY PRODUCE PRIZE WINNERS AND WILL MAKE YOU MONEY

Mr. E. B. Thompson,

Dear Sir:--Our poultry show has just closed and I am now ready to report the success I had with the chicks hatched from your "Ringlet" eggs. I hatched 17 chicks and succeeded in raising all of them. I entered nine birds in the show, five cockerels and four pullets, and won eleven ribbons, winning 1st, 2d, 3d and 4th prizes on pullets, 2d, 3d and 4th on cockerels, special prize for best colored male, special for best shaped female, special for highest scoring female, and first prize on exhibition pen. I am greatly pleased with the results and want to be entered as one of your regular customers.

Yours very truly,

Walworth, Wis., Dec. 12, 1908,

H. L. Radebaugh.

Elegant breeding and exhibition birds for sale in any number, and you may have the product of my skill gained by 30 years' experience at reasonable prices. Your wants will have my very best and personal attention. Eggs from the World's finest exhibition matings: One setting \$6; two settings \$11; three settings \$15; four settings \$18. Richly illustrated 50-page catalogue upon application; it is full of original pictures of New York winners from life.

**LAWN FENCE**

Many designs. Cheap as wood. 32 page Catalogue free. **Special Prices** to Churches and Cemeteries. Coiled Spring Fence Co., Box 408 Winchester, Ind.

Best of materials and workmanship. Noted for strength, durability and neatness.

SHIMER Poultry Fence

is made of high carbon, crimped steel wire, heavily galvanized—won't sag, bulge, rust out nor pull apart. Requires fewer posts. Catalogue, illustrating Fences for all purposes and containing valuable suggestions on poultry raising, mailed free.

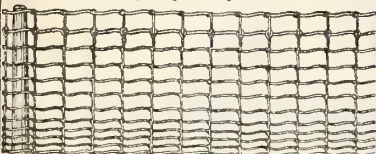

SPRING STEEL FENCE & WIRE CO.,
1814 Brown St., Anderson, Ind.
Western Factory: Coffeyville, Kas.

PAGE FENCES

Jubilee Year

Or Quarter-Centennial of Page Fence

We are the Pioneer Woven Wire Fence Makers of the World. Now celebrating the Quarter-Centennial of Page Fencing. Over 800,000 satisfied users. A twenty-five year record of success without a parallel. Page Quality is the secret of Page Supremacy.

**They "Give and Take" But Never Break**

A Page Fence acts as a cushion when stock run headlong into it. It breaks the shock but does them no injury. The secret of its double strength and marvelous resiliency is in its High-Carbon, Basic Open-Heath, Spring Steel Wire, which is coiled lengthwise. This feature covered by our exclusive patents. This elastic quality holds the fence stiff and secure with 50 per cent less posts than are needed for ordinary wire fences.

A "Live Wire" Fence Book FREE

Send for the "Jubilee Edition" of the Page Catalogue. Filled with important Fence Facts. Handsomely illustrated. Postal card gets it. Page Woven Wire Fence Co., Box 552 Adrian, Mich.

The Fence the Government Demands

JUST OUT.

Notice has just been received of the completion of Mr. Potter's new book on the Potter System of selecting laying and non-laying hens and egg production. Without a doubt this is the greatest and most valuable book ever published on the subject of laying hens and egg production, and no poultry raiser can afford to be without the valuable information which it contains. It gives the poultry raiser just the necessary knowledge he must have if he is to make a profit on his flock of hens, for when he knows the Potter System he knows how to keep only laying hens and how to get the largest possible egg production. Below is printed a table of contents of Mr. Potter's new book, "Don't Kill the Laying Hen." It contains 100 pages and twenty-eight illustrations fully describing and explaining the laying condition of hens and reasons why they do not lay:

How the Egg Grows.
How Nature Controls the Laying Organs.
The Secret of the Potter System.
How to Pick Out the Non-Laying Hen.
How to Determine the First State of Egg Development.
To Know How Far the Hen is Toward the Laying Point.
How to Pick Out the Hen That is Laying.
To Know the Hens That Are the Most Prolific Layers.
To Know How and When to Cull the Non and Poor Layers Out of the Flock.
To Know the Ones to Sell and the Ones to Keep.

Why Early Spring is the Best and Most Practical Time to Cull the Poor and Non-Layers Out of the Flock.

How to Tell the Hen that Has Laid Out a Batch of Eggs and Other Information Regarding Sitting Hens.

The Best Way to Break Up the Broody State.

How Eggs Can Be Produced in Winter, and Some of Nature's Laws Regarding Egg Development Explained.

How the Laying Organs Are Affected When the Hens are Infested with Vermin.

How to Avoid Wintering Hens that Are Likely to Be Poor Winter Layers.

How Overfeeding Before Egg Production Starts May Reduce the Egg Production.

The Laying Hen Should Be Educated: When, How and Where.

How to Separate the Poor Layers from the Good Without Handling, or How They Will Separate Themselves.

How to Buy Hens in the Forepart of Winter, that Would Make Good Winter Layers, and Sell Them Again at a Good Profit in the Spring.

How Roup and Similar Diseases Affect the Laying Organs of Hens; Also How the Laying Organs Become Disabled by Other Causes.

Ten Ways to Suspect Hens that Are Not Laying.

Three Ways to Prove Their Laying Condition.

Refer to the ad of T. F. Potter & Co. found in this issue and send for their circu-

lars and other printed matter describing the book and other goods they offer. They have something which should interest every poultry keeper if he desires to get more paying results from his flock.

COMPEL YOUR LAND TO EARN MORE.

An interesting experiment has been conducted by W. N. Scarff, New Carlisle, Ohio, where in a new cherry orchard he has planted small fruits. Last season two acres produced \$1,400 worth.

Mr. Scarff is an expert nurseryman and sends small fruits and nursery stock all over the country. Some farmers think they will save a little by trading with some traveling agent or irresponsible dealer. There is a risk in that. It is wiser to order of some well established nurseryman.

Mr. Scarff sends his catalog free and with it a small fruit plant of his own selection.

E. B. Sprague, of Flushing, N. Y., whose Inglesand Poultry Yards have recently come into prominence through his success at many of the eastern shows, is among the most enthusiastic of our younger Buff Orpington breeders. Mr. Sprague, who is a "stickler for type," is also proud of the true "exhibition buff" color that he has secured. Note his 5th prize hen at the recent Madison Square Garden show. The stock of the Inglesand Poultry Yards has recently been greatly improved by the introduction of the cream of the famous Gedney Farm flock. Mr. Frank Gaylor, when he severed his connection with Gedney Farm, reserved for his own use a number of the best birds there, but on finding himself prevented from active breeding by his New York City interests he gave Mr. Sprague the chance to secure these birds. It is through his courtesy that Mr. Sprague feels he can offer to other fanciers Buff eggs and stock which equal the best. See his advertisement on another page.

Kaufmann & Winheim, Nutley, N. J., won at Rutherford, N. J., 1st, 2d cock; 1st, 2d, 4th hen; 1st, 2d, 4th, 5th cockerel; 1st, 2d, 3d pullet; 1st pen; all R. I. Red Club of American specials and cup for best display. J. J. Yelton, judge.

SAFE

BROWN HEAVY WEIGHT POULTRY FENCE

Does Not cost one-half as much as the Common Chicken Netting, yet will last five times as long.

Size of Wires. The top and bottom wires are No. 9 gauge—same size as nearly all stock fences. Intermediate and stay wires in same proportion.

Quality of Wire. All material used in Brown Poultry Fence is best grade of High Carbon, Double Strutch Spring Steel Wire. The galvanizing is the heaviest and best possible. All wire is subjected to careful inspection and acid tests before being made into fence.

Construction. Very closely woven, and a sure protection against marauding animals. Your poultry is safe from everything when enclosed with Brown Fence. Built of material heavy and strong enough for horses and cattle. Wires cannot possibly slip.

Saving in Cost. With a No. 9 top and bottom wire you can save at least one-half the posts, and besides you require no top railing or bottom boards. These items alone usually cost more than the fence.

Price. Our prices are less than common netting costs. WE PAY THE FREIGHT and guarantee safe delivery to your nearest railway station.

Guarantee. We guarantee every rod of our Poultry Fence. Every customer who buys this fence and does not find it entirely satisfactory and fully up to his expectations is at liberty to return the same at our expense.

Before buying Poultry Fence get our catalog and investigate the many superior qualities of our fencing. We have 150 styles of fencing—a fence for every purpose. Write today.

THE BROWN FENCE & WIRE CO.,
Dept. 3 CLEVELAND, OHIO.

X-L-ALL 33 CTS. Per Rod

Poultry fencing.

FIVE TIMES CHEAPER Than Netting

48 inches high, 33 cents per rod; 58 inches high, 36 8-10 cents per rod.

Stretches up easily, stiff and straight; does not rust out. Farm and stock fencing of all heights and styles. 14 6-10 cents per rod and up. Made in and shipped direct from our own factory at prices but little more than factory cost to make. Every rod guaranteed perfect and to satisfy you absolutely, or your money back. Address

Chicken and Rabbit Proof, Hog Tight and Strong Enough to Stop a Vicious Bull

Don't buy a single rod of fencing or netting until you have seen our Fencing Catalogue, which shows our complete line of poultry fencing and netting, farm and lawn fencing, gates, steel fence posts, barbed wire, etc., all at wonderfully low prices. Write us and say, "Send me your free Fencing Catalogue No. 1437 (also ask for our special Catalogue of Incubators and Poultry Supplies), and you will get everything by return mail."

SEARS, ROEBUCK AND CO. CHICAGO

BUCKBEE'S SEEDS SUCCEED.

Does this terse phrase mean anything to you, Mr. Seed Grower? Are you interested in knowing where seeds that succeed in germinating, thriving and yielding a profit are to be procured? Poor seeds are expensive at any price. They make you waste your time, they exhaust your patience, they mislead you and the family into thinking that there will be lettuce, crisp radishes, fine peas and all the other kinds of garden truck to eat in due time. But alas for the man who waits for his cheap seeds to grow. Many times he will regret the day that he was led to think that it paid to sow any kinds of seeds but the best. The seeds offered by the Buckbee Seed Farms are "full of life" and sure to please. In the advertisement of this seed firm is a very tempting offer to try these seeds. Read it and address all orders to H. W. Buckbee Farm 51, Rockford, Ill.

THE ROOFING QUESTION SETTLED

It is the general complaint among builders and property owners that the roofing question has gradually become more serious the past few years. The vast forests of America, that once yielded an abundance of pine and other valuable woods for shingles, are fast fading away and a wood famine is threatened. As a consequence of this rapid diminishing of the visible supply inferior woods have been used of late years and the shingles are not what they once were, or what they should be.

Slate, iron, tin, as well as pitch and gravel, have been used to a greater or less extent, but the results have not been sufficiently satisfactory to consider that any of these materials settle the roofing question. Recourse has also been had to tile, cement, etc., but they, too, fall far short of the ideal roofing. They are too heavy, too expensive and for many other reasons are limited in their adaptability and usefulness.

It should therefore be a matter of great interest to every man who is going to build, or who owns buildings or will need new roofs, that we have been able to produce such a valuable material as Vulcanite, which is at once light, strong, durable and cheap, and which is at the same time abso-

lutely waterproof, windproof, acid, fume and sunproof—a material that is admirably fitted for all kinds of roofs—from the cottage to the castle.

Vulcanite is also largely used for covering the outside of buildings, floors of warehouses, offices and kitchens. And lately it is fast finding its way to the farm, where it is proving a boon and a blessing to the farmer whose building operations have been detained on account of the rapidly increasing cost of building materials.

Vulcanite is the one material that is suitable for every building on the farm, and its cost will enable the farmer to build all the buildings he has been promising himself for the past few years. Vulcanite settles the roofing question and settles it right.

Address Patent Vulcanite Roofing Company, 625 South Campbell avenue, Chicago, Ill.

Alice M. Hedges, Pana, Ill., breeder of White Plymouth Rocks and White Holland Turkeys, has been an advertiser with us during the past two years, during which time she has brought her stock to a high state of perfection, as is evidenced by the grand winnings she has made during the past season. She has labored long and hard to produce stock that would satisfy the most exacting customer and much praise is due her for the manner in which she has succeeded, for we have yet to hear of a single dissatisfied customer of hers. She is conscientious and painstaking, and everyone who favors her with an order can feel sure that they will get their money's worth. Write her for full information and mention American Poultry Journal.

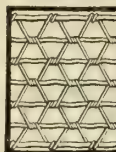

Daniel P. Shove, Fall River, Mass., who has been a breeder of thoroughbred poultry for the past 30 years, won on his R. I. Reds and Houdans at New York, and at the Boston show won on R. I. Reds, Houdans, Geese and Turkeys. Mr. Shove, who is licensed by the A. P. A., has judged more R. I. Reds during the past 10 years than any other one judge on the circuit, and is therefore well qualified to breed R. I. Reds to perfection. Look up his ad elsewhere in this issue and write him for prices and particulars, and mention American Poultry Journal.

LAWN FENCE

Many Styles. Sold on trial at wholesale prices. Save 20 to 30 per cent. Illustrated Catalogue free. Write today.

A. C. HAWKINS Lock Box 25 LANCASTER, MASS.

Have Healthy Hens

There's no money in the other kind. And thousands of poultry men have proved that egg-producing, healthy hens are merely a matter of regularly giving them

Pratts POULTRY REGULATOR

(For 37 years called Pratts Poultry Food)

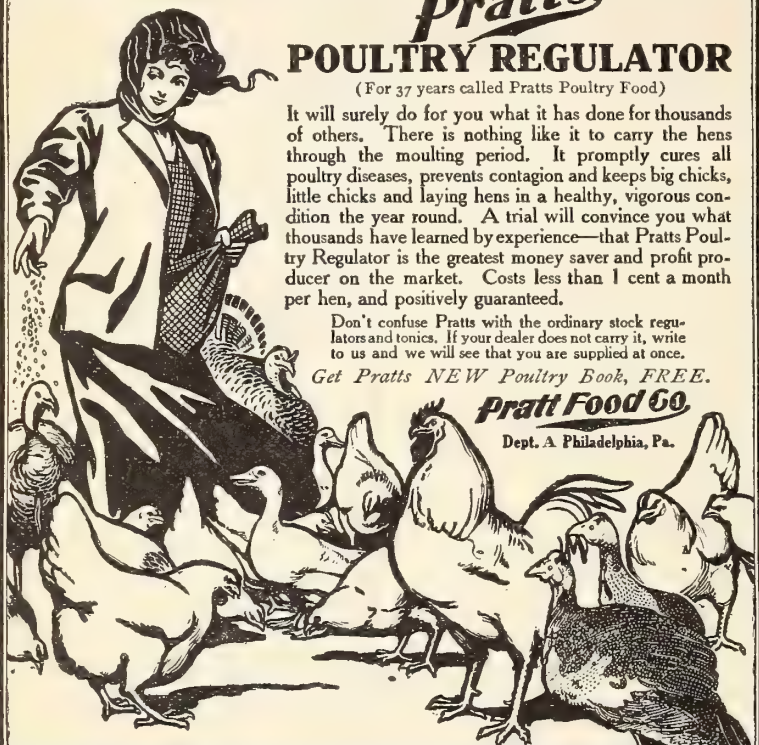

It will surely do for you what it has done for thousands of others. There is nothing like it to carry the hens through the moulting period. It promptly cures all poultry diseases, prevents contagion and keeps big chicks, little chicks and laying hens in a healthy, vigorous condition the year round. A trial will convince you what thousands have learned by experience—that Pratts Poultry Regulator is the greatest money saver and profit producer on the market. Costs less than 1 cent a month per hen, and positively guaranteed.

Don't confuse Pratts with the ordinary stock regulators and tonics. If your dealer does not carry it, write to us and we will see that you are supplied at once.

World's Largest Incubator Factory Builds the Sure Hatch

And Absolutely Guarantees it for Five Full Years

When you buy a Sure Hatch Incubator, you get a machine backed by the five-year guarantee of the world's largest incubator factory. Some time when you are out this way, stop off and go through our mammoth plant. See how we build the Sure Hatch, using the celebrated California Redwood for the outside walls and lining. Watch the workmen. Note with what care and skill they fit the various parts together. Talk with our Superintendent. He will explain the unique and valuable features that have made the Sure Hatch famous as a hatcher of healthy chicks. If you can't come out to see us, the next best thing is to

Write a Postal for a FREE COPY of the Splendid SURE HATCH BOOK

This is the book that has created a commotion among makers of cheap "bargain" incubators. We have nothing against these fellows, and the only reason we expose their schemes is to protect the public from imposition.

If a man offered you a \$10 gold piece for \$7.50, you would know at once that he had a counterfeit coin. In this book, we show what must go into an incubator that will do the work. Each

principle and each part is explained. Each point is clinched with a reason. When you get through reading the Sure Hatch Book you will actually know more about the subject than some incubator manufacturers know. And you can't be bamboozled into buying a counterfeit incubator, at a ridiculous "bargain" price.

Better hold off on buying an incubator until you get the valuable Sure Hatch Book. Then you will know what's what—for the book gives the plain, unvarnished facts. Write tonight.

Sure Hatch Incubator Co., Box 6, Fremont, Neb., or Dept. 6, Indianapolis, Ind.

Dickinson's Feeds for Young Chicks

Sun Chick Starter is a primary grain food for the baby chicks during the first 20 days. In addition to the regular assortment of cracked grains and seeds Sun Chick Starter contains steel-cut oat meal, fine granulated bone, and fine charcoal. Has no equal in promoting healthy and rapid growth. Write us if your dealer can't supply you.

Crescent Chick Feed

Specially prepared for chicks from three to eight weeks old. The materials and proportions are similar to the Sun Brand, but a trifle coarser, to meet the requirements of older chicks.

THE ALBERT DICKINSON CO., Seed Merchants, Chicago—Minneapolis

Only 8 Cents a Bushel

A POULTRY FOOD that will save you many a good dollar and make your hens lay better than ever. Not sprouted oats nor beet pulp, but a REAL FOOD. Thousands of poultry raisers now using it. My Lamplish Hatcheries and Brooders, and Safety Nests, Coops, Feeders and Water Fountains are 80 percent better and cheaper than any others. See My Free Booklet. Address, F. GRUNDY, Poultry Expert, - - Morrisonville, Ills.

BUFF LEGHORNS AT MORGAN POULTRY FARM.

One of the most pleasant days in the writers' poultry experience was December 9, 1908, when I had the pleasure of scoring 100 very choice Buff Leghorns at the Morgan Farm, Beloit, Wis. Knowing the fame of these famous Buffs, I was prepared to expect some fine ones, but did not expect so many good ones and so few poor ones. Rich, even golden, buff describes the prevailing color, and in shape they have a type peculiar to themselves. Correct in shape of back, full breasts and low tails, marked a large number of these birds as fit for any show. The farm is not raising Leghorns merely for fun. As a money making feature of these 1,200 rich acres, the Leghorns occupy a place alongside the Percheron horses, pedigreed sheep, fancy cattle and thoroughbred swine, and are giving a good account of themselves.

Mr. Haff, the manager, is a practical man and raises Leghorns in a practical, sensible way. Two thousand six hundred birds look like a big chicken crop, but when one goes over the buildings and sees the modern equipments, labor saving devices and systematic plan of doing everything, it can be readily understood how such a large number of finely developed, healthy birds is possible. The laying houses are

Second cock Detroit, 1909. River Home Poultry Yards, Perrysburg, Ohio.

filled with "business" hens, laying freely all this eggless season, while the exhibition house, containing the cockerels, had a large number of the choicest males I ever handled. Line breeding and selection is Mr. Haff's practice. Trap nesting develops the utility side. A few days ago at one of our largest shows I stopped before the Buff Leghorn coops that were decorated with blue ribbons. The birds looked good. Two eggs were in the coop. "What strain?" asked a visitor. "They were hatched from Morgan Farm eggs," said the happy owner, and there came to my mind a line like this: "Morgan Farm Leghorns lay as well as win."—T. J. Rountree, in Poultry Tribune.

After many years devoted to a study of the incubator problem the manufacturers who have made the most notable successes in this line seem to have adopted as their watch words: High efficiency coupled with the greatest possible simplicity.

As an instance, attention may be called to the advertisement of the Advance line of incubators, which appears in this issue. Its makers, the Advance Incubator Company, of Dayton, Ohio, are practical men, who have been in the poultry business for years themselves and have naturally brought their own long experience to bear upon this subject.

They have not slighted expense in the real essentials, yet they have evolved a low price incubator, of a size and quality that has proved immensely popular, because of its absolute reliability and remarkably high percentage of hatches.

LARGE PROFITS IN EARLY HATCHES.

Spring chicken days are coming, and the chicken that is ready for broiling or frying in June and July brings the best profits. The only way to get chickens to this early market is to buy an incubator and get started right away.

It is estimated that a good 180-egg incubator, like the Queen, may be made to earn its cost each month it is used, or more than 1,000 per cent in a year.

The new "Annual Queen Book," just issued by the Queen Incubator Company, Lincoln, Neb., is a book every page of which is full of information for the poultryman, big or little. If you are a beginner it will put you on the right track to make the largest profits from your venture. The Queen incubator, with its absolutely smokeless lamp and other important features, stands in highest favor with experienced poultrymen.

Many thousands of these excellent machines have already been sold, which is convincing proof that they give satisfaction, because that is the point always insisted on by the manufacturers. These machines are delivered, freight prepaid, and a 90-day guarantee goes with every Queen.

Besides incubators this company makes high-grade brooders, which are famous as chicken raisers. The Queen Book will be sent free to our readers who ask for it, giving their name and address.

PRESERVING EGGS.

Rev. Edgar Warren, of Atkinson, N. H., the well-known writer on poultry topics, has added another book to his collection, which deserves a large circulation. It is called Preserving Eggs—the Why and

How, and deals with a subject of great interest. If every poultry paper in the United States should lay down his family supply of eggs in March, April and May, the months when eggs are cheapest, it would take 250,000,000 dozen eggs out of the market, and the price would never drop below a point where it would not give a profit to produce them.

In order to gather data for his book Rev. Mr. Warren wrote to every experiment station in the United States, Canada and Europe, where they have made a study of preserving eggs, and obtained from them not only their printed reports, but private formulas of great value. He has also gathered recipes here and there from private sources which have never before been published. One fact of great interest is given to the world for the first time in his book. Eggs may be sterilized by the X-ray, so that their keeping qualities will be greatly increased. This discovery is not only of great value to the poultryman who wishes to lay down eggs, but also to breeders of high-class fowls who sell their surplus eggs on the market. Eggs exposed to the X-rays become sterilized and will not hatch. The price of the book is only 50 cents. Rev. Mr. Warren has an interesting circular, which he sends free.

A BIG UTILITY PLANT UNDER NEW MANAGEMENT.

Statistics show that poultry raising is the greatest farming industry in this country of big industries. The demand for the products of the poultry farm grows in direct proportion to the increase of population and the number of poultry raisers also multiplies at a surprising rate.

Many people go into this business as a

"side issue" and soon find that, like everything else, to be made profitable it must be carried on on a larger scale. Then they discover that it is a very exacting avocation and one that refuses to run itself. Soon the problem arises as to whether they will stick to the chickens or stick to their regular business. The solution must always depend upon circumstances.

Mr. Lee T. Hallock, the former proprietor of Woodlands Farm, is one of the many who have had to give up the chickens in order to look after other business interests. Although compelled to give up active interest in poultry raising Mr. Hallock has no desire to see Woodlands Farm fall from that position which it has attained through his skill and efforts. Hence, in finding a purchaser he has taken pains to assure himself that the plant would lose nothing by the transaction.

Dr. G. Carleton Brown is the man who now has charge of the breeding and operation of the Iona plant. He is a scientific poultryman with a practical experience and there is no doubt but that Woodlands Farm, Iona, N. J., will maintain its reputation for standard bred utility stock.

INCUBATOR AGENTS.

If you are selling incubators you will be interested in a proposition which the Zenner Disinfectant Company, 117 Lafayette Ave., Detroit, Mich., can make you, concerning Zenoleum Disinfectant. Write to the above concern, telling them the name of the incubator which you are selling. Right now is the best time to do it, as this is the season of the year when people are getting ready to start their incubators.

Eggs For Hatching

A \$50 BIRD FOR \$5

Mr. G. C. Kerschler of Evans City, Pa., writes: "I will let you know the results I got from the eggs I purchased from you. I only got two chicks but they were worth several sittings of eggs in the show room. As I won first on cockerel scoring 95 points, and he was a late hatched chick, cut in weight. I refused \$50 for him; he is a fine bird. The pullet scored 94½ points." This is only one of the many thousands of testimonials we have supporting our claim of

The World's Best

WHITE WYANDOTTES. We have mated 15 yards this season. Never before have we mated pens of such quality; not a bird that will not support our claim. If you intend placing your order for eggs, remember that it has taken years of careful selection and breeding to produce our WORLD'S BEST STRAIN of

White Wyandottes

and in buying from us you avoid all of the worries, the years of waiting and perhaps a hundred disappointments. The price remains the same, \$5 per sitting. Send us a dime today for our catalogue; the finest catalogue ever issued.

PAROID ROOFING

The poultrymen who have covered the roofs and walls of their poultry buildings with PAROID ROOFING can make more money than the men whose buildings are covered with an inferior roofing.

Why? Because PAROID keeps out the cold in winter and heat in summer, and dampness, better than any other ready roofing on the market. In other words, PAROID insures healthy productive stock by largely preventing temperature extremes.

The base of PAROID is a thick wool felt which we make ourselves. We saturate every fibre of this felt with a secret waterproof preparation which is not affected by years of exposure. We know it because PAROID ROOFING has stood the test of time.

Water, moisture, wind, frost, cold or heat cannot find their way through PAROID. It is absolutely air tight and fire resisting.

You can lay PAROID yourself more easily and quickly than any other ready roofing. The man who has laid different roofings will tell you so. Complete directions and fixtures are packed inside of each roll.

PAROID will also make your building more attractive than other ready roofings. Compare samples and you will see the difference.

Because we make PAROID as good as we know how and better than any other ready roofing on the market, we stand back of every roll. Therefore, every PAROID customer is a satisfied customer. PAROID dealers also stand back of PAROID.

With PAROID ROOFING we furnish our own special caps and nails. Being square they have more binding surface than ordinary round caps. We make them waterproof by a special process. These specialties are furnished with PAROID ROOFING only.

PAROID is sold by dealers everywhere. See the men who have used PAROID ROOFING and you will find satisfied customers. Will you be a satisfied customer if you use an inferior ready roofing?

If interested in plans for poultry buildings send for book "Practical Farm Buildings" and sample of PAROID ROOFING.

A 10-YEAR ROOFING GUARANTEE BACKED BY A SURETY CO. BOND.

In the advertising columns of this paper the United Roofing & Manufacturing Company are offering to every purchaser of 3-ply Congo Roofing a National Surety Company guarantee bond, which covers a period of ten years. This company is one of the largest surety companies in the world (capital and assets of about \$2,000,000) and when they back a proposition there must be a great deal in it or they would not have risked their reputation on something about which there could be any question.

The Congo people are desirous of making this roofing the most used in the world, and with their usual foresight hit upon this excellent plan of giving the buyer satisfaction as well as increasing their sales. The bond is a plain statement of what they can and will do, and offers such protection that no prospective buyer can afford to overlook. This bond means protection to you.

It isn't necessary to buy the roofing to learn the contents of the bond—which is another pleasant feature. By writing to the United Roofing & Manufacturing Company, Philadelphia, Pa., they will be glad to send you information regarding same and sample free.

Buyers of stock and eggs will make no mistake in purchasing same from Walter G. Fenton, Mount Clemens, Mich. Mr. Fenton devotes his entire time to the breeding of Columbian Wyandottes for fancy and utility purposes. Mr. Fenton claims the

WHITE PLYMOUTH ROCK.

Owned by F. Gage Cutler, Carthage, Ill.

Columbian Wyandottes are the greatest winter egg producers before the public today. His large winter trade in fancy table eggs substantiates his claim. If you intend buying eggs for hatching do not let weather conditions or distance interfere with placing orders at any time. The eggs are very carefully packed and thoroughly protected so as to insure perfect safety in shipping. See ad elsewhere in this issue.

River Home Poultry Yards, Perrysburg, Ohio, report the following winnings: At Chicago, December, 1908—on Light Brahmas—1st, 2d, 4th cocks; 1st and 2d hens; 4th and 5th cockerels; 2d, 4th and 5th pullets; 1st pen; best display—Jacquin, judge. At Detroit, Mich., January, 1909—on Light Brahmas—1st, 2d, 3d cocks; 1st, 3d, 4th hens; 1st, 2d, 3d pullets; 1st pen—on Barred P. Rocks, 2d cock—McClave, judge. At Boston, Mass., January, 1909—on Light Brahmas—3d and 4th cocks—Nichols, judge. At Toledo, Ohio, January, 1909—All prizes on Light Brahmas—On Barred P. Rocks, 3d and 4th cocks; 4th cockerel—Tucker, judge.

Elmer V. Shultz, Webster Grove, Mo., reports the following winnings on his S. C. Brown Leghorns at the late Kansas City Show: First cock and two specials on same bird; 3d hen. He has mated up four cockerel and five pullet pens and is now prepared to fill all orders for eggs promptly. Write him for prices and particulars and mention American Poultry Journal.

LARGER BREEDS VS. THE SMALLER AS LAYERS.

Few people will believe it when you tell them that the larger breeds of poultry will lay as many eggs in a year as the Leghorns or other smaller breeds. But as a breeder of all breeds of the highest laying strains in the United States I am prepared to say that if properly fed and cared for the Rocks, Wyandottes, Langshans, Rhode Island Reds, Buckeye Reds and Orpingtons are as heavy egg producers as other smaller breeds. We have many egg records from these breeds above 200 and 240 to as high as 293 eggs per year from individual birds.

To be heavy layers a breed or a strain must be a strain that has been bred to lay for years by selection. Every year the best layers must be selected just like a man breeds up a fine dairy herd, till after many years of hard work he has a herd that will produce five times as much butter as the ordinary herd of farm cows. The average hen lays about 60 eggs a year, just about paying for her keep. By careful selection for years one can produce a strain of birds that will average over 200 eggs per year and make from \$1.50 to \$3 per hen clear profit every year.

This is why we breed the heaviest laying strains, because the "hen that lays is the hen that pays," and furthermore the hen that is bred to lay is the hen that will produce laying pullets, and cockerels that will much improve the laying qualities of other flocks.

Everyone should select the best layers for breeders, and when they purchase eggs or stock should select them from breeders that breed to lay as well as for show purposes. This makes a great difference between a profit and a loss in poultry raising.

F. Gage Cutler,
Carthage, Ill.

NOTICE.

F. Gage Cutler, of Carthage, Ill., has purchased the entire flock of Snow White Rocks from Buckey Brothers, the well-known breeders, who reside in Spencer, Iowa. This purchase is one that will place Mr. Cutler as a Rock specialist in

the front ranks. The stock purchased is high-class in every sense of the word, and F. Gage Cutler is now in a position to show his birds in the fastest company without the slightest fear of defeat. Mr. Cutler's ad appears in the current issue. Mr. Cutler also has some magnificent Barred Rocks which are bred to lay, many of them having egg records from 225 to 293 eggs per year.

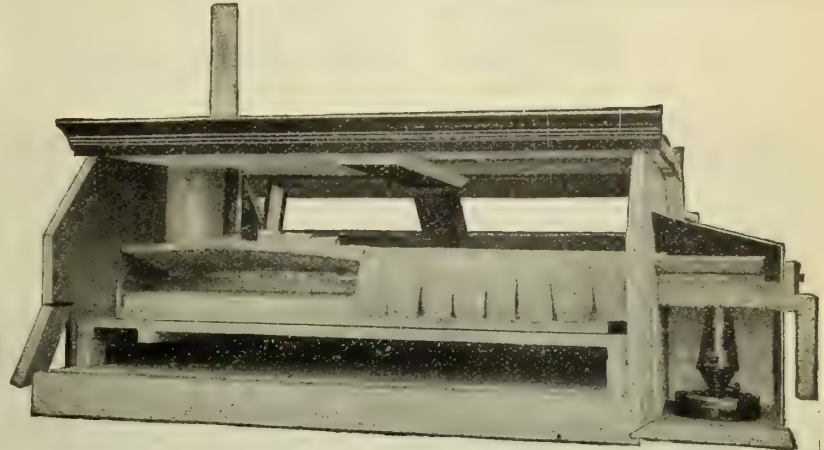

He recently purchased from Bradbury & Bradbury, Wolcottville, Ind., their entire flock of Columbian and Partridge Wyandottes, and is now prepared to fill

Swiss embroidery. What sort of material can I purchase to go well with these trimmings? I want it real pretty. Mary D.

I wish you had told me something of the style of the pattern, and I could have better advised you. I know of nothing that will combine better with your trimmings than one of the Simpson-Eddystone Prints, which you can get at any dry goods store.

These cotton dress goods are soft, fine and in beautiful designs, are washable and do not fade.

Make the waist with a Dutch neck, using the embroidery for the yoke. Put neat cuffs

Box 56, Freeport, Illinois

THE LARGEST EXCLUSIVE DAY-OLD CHICK PLANT IN THE WORLD.

For the benefit of those who are unable to pay us a personal visit and inspect our plant, the largest exclusive day-old chick plant in the world, I will endeavor to give a short description which with the aid of the cuts herein will give some idea of what we have.

Our plant consists of forty acres of rolling ground which is devoted exclusively to poultry and is situated about three miles out of Lima, Ohio, a city of over 35,000 people. The Lima-Bellefontaine branch of the Ohio Electric Railway passes through one corner of the

and we feel more than repaid by the results we get in securing fertile eggs which produce strong, vigorous, livable chicks.

Our breeding yards consist of about eighteen acres which is covered with a nice grass sod and all our yards are fenced with Pittsburg poultry fence five feet high excepting our Leghorn yards, which are fenced by an eight-foot fence. The different breeds are separated so that there is no possible chance of the breeds mixing.

The colony or brooding house, which is an original idea of our own, has been pronounced by some of the most prominent poultry people as the most complete and best poultry house ever designed. They are ten feet wide by fourteen feet

top and swing out, and by this method the window can be left up during most any storm, and it will not let in the rain. The lower half has two large doors hinged at the top to swing up; the openings are covered by muslin. These doors are never shut; fresh air gently diffuses through the muslin at all times without causing any draft. No moisture ever collects on the walls in this house and they are perfectly dry at all times. An entirely open-front house for all kinds of weather never appealed to me, or many other people, I do not think. By this arrangement you can secure an open front whenever you desire it, or a closed front, or a combination. This combination is the result of over a dozen different types of colony houses I have built and is

Largest incubator and brooder house in the world, on Day Old Chick Plant of L. Yarian, Lima, Ohio.

farm, cutting off about three-fourths of an acre. Cars run by the farm at short intervals and visitors to our plant can ride out from the city to stop No. 3 for 10 cents, then you are within 1,000 feet of our residence.

We have a private shipping station on the farm where we can ship over seven different express companies direct to all parts of the United States, and in an hour after our baby chicks are hatched they are on their way to their future homes.

All our breeding and growing stock is housed on the colony house plan. All our colony houses, of which we have about eighty, are built on runners and can be hauled about the farm to any ground. This method of housing the stock makes considerable work in caring for the birds, but the breeding stock is always healthy,

long, eight feet high in front and five feet high in the rear, having a shed roof. These houses are built on runners which are cut at each end so that they may be pulled forward or back. There is a door on each side of this house about one foot from the front. These doors are directly opposite each other. These two doors may be turned back, and as the houses are on runners, for convenience in the winter these houses may be hauled up in a row with the doors turned back, and placing the houses side by side, you have a continuous house by simply putting in two or three boards for your door jamb to keep out the wind. The front of these houses has a new and novel but I am glad to say window arrangement. The upper half has three half-sash windows, each being a six-light 10x12 sash. They are hinged at the

ideal. The houses are fitted with dropping boards and roosts which are cleaned every other day. Blind nests are provided and the hens enter at the back. Straw and litter is kept on the floor, the hens being compelled to dig for what they get. A beef scrap hopper is on the wall, and a hopper containing shells, grit and granulated bone. Our colony houses for our young growing stock are eight feet square, four feet high in the rear, five feet high in front. They are built on runners and can be hauled about the farm at will. They contain roosts and dropping boards and have a window in front. As soon as the young stock being grown for breeding is old enough to do without artificial warmth it is desirable to get them out on free range or on a large grass run. This is where our properly designed coops come in service. They

Economical and Sure

I will ship live, healthy, thoroughbred chicks for the same or less money than you now pay for the eggs of same quality, so why spend your time hatching them yourself?

How can I do this? Simply because I make chicks a specialty—hatching thousands at a time in the largest exclusive chick hatchery in the world. My stock has won honors where competition is the hottest—at New York, Chicago, Boston, Cincinnati, Springfield, Fort Wayne, Indianapolis, etc.—they will win and make money for you. No specialty farm produces a cleaner, purer strain—no birds get better care than mine.

Chicks or breeding stock for sale in either White Rocks, White Wyandottes, Barred Rocks or S. C. White Leghorns—all raised on my own large poultry farm. Do not ask for other varieties.

Why Buy Chicks

Day old chicks are easily shipped almost any distance, as they require no feed for several hours after hatching. They are lighter than eggs, more easily handled when packed in my special shipping cases and are cheaper, safer, surer than the ordinary incubator chick every time. **Shipping them does not affect them in the least.** Read in the next column what customers say who have bought my chicks.

I have hundreds of such letters on file. Isn't this pretty good proof of their superiority?

Proofs of Merit

"I now have 48 of the finest chicks anyone could wish for from the shipment of 50 sent me two months ago.

They are excellently marked—far better than I had hoped for." A. S. Dudley, Scranton, Penna.

"The chicks arrived the evening of the 1st of July in fine condition. We thank you for your prompt attention, also for the extra chicks."

Jno. P. Cowher, Philipsburg, Pa.

"The chicks I purchased of you have matured into as fine birds as I have ever seen. Your prices are higher than some others, but your chicks are worth several times more." B.C.P., Ft. Wayne, Ind.

Why My Chicks Pay

My guarantee covers a full count and safe arrival in first class condition at your nearest express office.

Hatched from my own high scoring breeding stock eggs, these little chicks of quality come to you at a price much cheaper than you can hatch them yourself.

Send now for my interesting catalog descriptive of my stock, prices and of high class chicks we are now booking orders on for early spring delivery. A postal will do; but send it today.

L. YARIAN, Box 26A LIMA, O.

accommodate about fifty chickens and are fitted with screen doors, which makes them verminproof and yet cool on a warm night. The young chicks are taken from our brooder house and placed in this house, where they remain, running at free range, when they are caught and shipped in the fall for breeding and exhibition stock to our well-pleased customers in all parts of the country.

In giving a description of our incubator and brooder house it is almost impossible in this article to give you an idea of the completeness and magnitude of the building. It is the largest incubator and brooder house in the world—40 feet wide by 201 feet long, 175 feet of which is two stories high, the balance being three stories. The first or ground floor of this building is cement throughout, which

hot air is far superior to the hot water machine.

This room is well lighted and ventilated, having many windows all around, the windows being hinged at the top to swing up, which permits of having them up at almost all times, allowing fresh air to enter. In one corner of this room we have our shipping department, where all of our baby chicks are carefully packed and labeled in our own specially designed corrugated paper cartons, and they are then taken from there to our shipping station and sent to all parts of the United States. Adjoining this incubator room we have one of the most complete poultry farm power-houses of any poultry farm in the country. We have bone mill for grinding green bone, corn shellers, feed grinders, clover cut-

which are continually hatching. The general temperature of this room is kept up by a hot water heating system around the outer edge of the room, but the chicks are brooded under individual hovers, as by this method of brooding we are able to give each individual brood of chicks any temperature that is necessary.

This room is so arranged that it is possible to control the ventilation at any time. It has a great many windows all around, all of them being two-sash windows. The bottom sash slides up and down. The top sash being hinged at the top permits of opening these windows at all times of the year for ventilation. A watering system is installed by which, by simply opening a faucet on each side of the room, all the chicks are watered at one time, thereby saving a great

Partial view of breeding yards, poultry plant of L. Yarian, Box 26 M, Lima, Ohio.

makes it very easily kept clean. This building is erected on concrete walls eight inches thick and five feet high, which with the cement floor makes it absolutely verminproof. On the ground floor we have our incubator room, which is the largest incubator room in the world and where our high-class baby chicks are hatched. Before the present season is over our hatching capacity will be such that we can turn out over 1,000 chicks per day. All the incubators which we use are the latest improved standard make, hot air machines. We believe

ter, fruit and vegetable cutter, feed cookers, all of which are operated by an eight-horsepower Foos gas engine. All of our grain is ground on the first floor and elevated to the second, where it is placed in bins.

On the second floor is where we brood all of our chicks in the largest brooding room in the world, which is 40x175 feet. This room has pens on either side; the chicks are started in at one end of the house as soon as they are taken from the incubator and are advanced five pens each week, making room for new chicks

amount of labor over the usual method of watering chicks in fountains. A litter of cut straw is kept on the floor and all grain is fed in this, making the little chicks scratch for what they get. This brooding room with its arrangement and conveniences has been considered by eminent poultry authorities to be one of the most complete and practical of any ever built.

On the second floor at one end we have two rooms, each room being about 40x20. One of these rooms is where all our grain is stored after it is elevated from the en-

IRA M. CROWTHER

Box A

Willoughby, Ohio

are winning high honors as such shows as Cleveland, Cincinnati, Indianapolis and many others. Rich, brilliant red, no better in America. Get my mating catalogue showing photos and a talk

gine room, the other room being used for a storehouse where fixtures and small supplies are kept. On the third floor we have two rooms, one of which is fitted as a bedroom, where our help sleep. The other room we use for our office. From this room we can see all over the entire plant and are able to see what is going on at any time. We think we have one of the most complete and up-to-date poultry farm offices in the country. Only modern business methods and systems are used. All our correspondence is filed in vertical letter files and it is possible to secure any person's correspondence at a moment's notice. Here also we have other records, such as egg records, incubator records, brooder records, etc. We receive daily stacks of letters from all parts of the country and it requires the entire time of two stenographers to handle this correspondence. It would be well worth your time to travel a good many miles to go through this building, as it is out of the ordinary.

L. Yarian.

Lima, Ohio.

A NEW BOOK ON REDS.

"One breed after another has been subjected to the final test of making money. The Plymouth Rocks, Wyandottes and a host of others still have their staunch and loyal supporters, and no doubt always will. The Rhode Island Red, however, strictly on its merits and because of the unusually satisfactory results which it has given whenever introduced into a new territory has with amazing rapidity

WHITE PLYMOUTH ROCK.

First prize cockerel at Boston. Bred, owned and exhibited by M. L. Chapman, Wethersfield, Conn.

won its way to the top of the list as the farmers' favorite.

"There are few hens which lay a larger egg, and in some markets its rich brown color makes it especially popular, even to the extent of bringing a better price than the eggs of many other breeds. Moreover the Rhode Island Red lays at an early age—sometimes as early as five months—and usually when six months old if given proper care. There are few other varieties which lay a greater number of eggs during the winter months when the prices are highest.

"The demands of modern poultry keeping have developed the trap nest, which constitutes the only means by which it is possible to ascertain to an absolute certainty just which hen in a given flock produces the largest number of eggs. My intelligent use of trap nests makes it possible for me to select eggs for incubation from my best layers, thereby aiding the customer to start a strain of heavy-laying fowls."

The above is taken from the new book of Walter Sherman, the well-known breeder of Rhode Island Reds. This book, advertised in another column, will be sent by Mr. Sherman for 20 cents, together with a coupon that is good for 20 cents on the first order that he receives for two settings of eggs. Address Walter Sherman, Citizen's Farm, Newport, R. I.

Kitselman Bros., fence manufacturers, Muncie, Ind., report their sales larger this year than ever before. They sell fence for 15 cents a rod up. It will pay you to get their free catalog. See their ad in this issue.

A NEW DISCOVERY! WHICH WILL POSITIVELY DETERMINE THE FERTILE EGG BEFORE INCUBATION

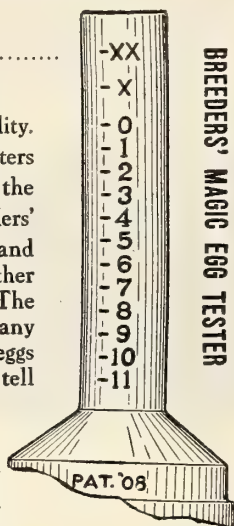

"XX" means fertility. Every good egg registers at some point on the scale of "The Breeders'

Magic Egg Tester," according to its condition, and this wonderful little instrument tells instantly whether an egg is fertile or not BEFORE incubation. The scale reads like a thermometer and so easy that any 10-year old child can test eggs. The fertile eggs register at "XX" and the tester never fails to tell whether fertility is strong, weak or absent.

A well-known poultryman of Western New York says:

Niagara Falls, N. Y., Jan. 19, 1909.
"Used your Breeders' Magic Egg Tester since Aug. 1908. 100% correct in all kinds of tests. Simply perfect. Invaluable." F. C. Seiler.

Breeders' Magic Egg Tester sent complete, ready to use, by mail post-paid \$2.00. Write for circular. Demonstrated in the Poultry Department at Buffalo Agricultural Fair with over 500 sales in the county. Order filled on day received. Money refunded in every case if not satisfied."

Diseases of Poultry

BY

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance.

With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.

113 South Clinton Street

Chicago, Illinois

A REMARKABLE VICTORY AT THE GREAT ONTARIO FAIR, GUELPH, 1908.

Martin's White Wyandottes in a class of 218 birds again showed their superiority in a most decisive manner by winning almost twice as many points as all their competitors combined, namely, 48 points to 26. J. A. Tucker, judge. The total winning was: Cocks (class of 37), 1st, 2d, 3d and 9th. Hens (class of 60), 1st, 2d, 9th and 10th. Cockerels (class of 55), 1st, 2d and 6th. Pullets (class of 66), 1st, 2d, 3d and 9th. Bulloch silver cup for best cockerel and pullet. Dawson silver cup for best cock, hen, cockerel and pullet. Fifteen honor badges donated by the Can. W. W. Club. National W. W. Club special ribbons on cock, hen, cockerel and pullet. Special for best cock and hen. Special for best cockerel and pullet. Special for best headed cockerel. Special for cockerel showing best table quality (awarded by judges of utility birds.) Special for best individual bird. Special for best display. Sweepstakes medal for best collection of any variety in the show (all varieties competing).

The silver cups in the novice class were won by a customer with pure Regal strain birds.

Record for 1908: Two exhibits—New York State Fair, the Ontario. Results: All the first and second prizes, 80 per cent of the third prizes, and all cups and specials.

Free: Send for catalogue and mating list telling all about the Regal strain. John S. Martin, Box A, Port Dover, Ontario.

A NEW BONE CUTTER.

One of the most interesting things to be brought to the attention of poultry raisers is the fact that there is a new bone cutter on the market which seems to be very effectively filling a long felt want in the way of a good, durable, cheap and easy running machine of large capacity.

The inventor and manufacturer of this bone cutter claims that wherever it has been exhibited it has had a greater sale than the combined sales of all others.

Like many other inventions which have

accomplished what had been previously supposed to be impossible, this new machine works on an entirely new principle. The most surprising thing, though, is that it is the simplest device imaginable, and it seems remarkable that no one ever thought of it before.

This is the third winter it has been on the market and is giving great satisfaction. The inventor refused to sell his patent and lack of sufficient capital has prevented extensive advertising. In fact, his advertisement on another page of this issue states that he is unable to fill orders promptly during the busiest season.

The bone cutter referred to is known as the King Green bone cutter and feed chopper, manufactured by R. H. O'Neill, 5205 Wentworth avenue, Chicago, Ill. Write him for booklet and mention American Poultry Journal.

WHITE ROCKS THAT WIN.

Indiana has been noted as a hotbed for White Plymouth Rocks so long that a winning made at any of the big shows within the borders of that state means that the owner must have quality of the highest merit. In this issue of the American Poultry Journal will be found the ad of Mr. P. E. Condit, 2138 North Capitol avenue, Indianapolis, who for the past five years has been showing in competition with the best breeders in the United States and winning his share of the prizes. His cock bird, Ivanhoe, winner at the Indiana State Fair and Indianapolis Winter Show, is considered one of the best in America. Mr. Condit's last great victory was at Indianapolis February, 1909, where he won every first, three seconds and four third prizes, and the grand challenge \$25 silver cup for the best exhibit of quality, all breeds and varieties competing.

Mr. Condit comes to us as an advertiser highly recommended and we have no hesitancy in recommending him to our subscribers. His printed matter is free, giving the correct list of his matings, describing the birds in every pen. Send for one.

John C. Plane, of Belvidere, Ill., won at Northern Illinois Poultry Association, Belvidere, Ill., January 25-30, 1909, as follows:

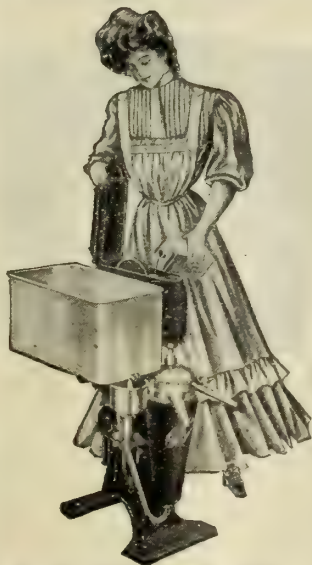

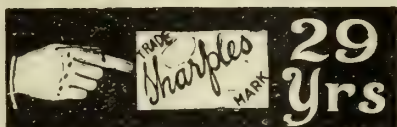

lows: Every first offered on Single Comb White Leghorns, silver cup for best cock, cockerel, hen and pullet in the show, all varieties competing; silver cup for highest scoring male in the show, and silver cup for highest scoring female in the show, all varieties competing. George D. Holden, judge, 28 in S. C. W. Leghorn class.

One of the best flocks of Rhode Island Reds it has been our pleasure to see this year is owned by L. Banford, Havelton, N. Y., Box H. They are practically free from smut, are large hardy birds and of splendid shape and color. One of the strongest features of this strain of Reds is the large size eggs laid, running from 26 to 32 ounces to the dozen. They have won many prizes for Mr. Banford and he has promised to send us a list of winnings. Look up his ad and write him for prices.

A. W. Blanchard, Beloit, Wis., breeder of Rose Comb Rhode Island Reds, has mated up some grand pens this season which contain his prize winners at Chicago and other leading shows, and he is now prepared to fill all orders for eggs promptly and at a reasonable price. He also has a few cockerels for sale cheap. His stock is first-class and he will treat you right. Write him for full particulars and mention American Poultry Journal.

E. L. Delventhal, of Warrenton, Mo., won at Kansas City Show, Kansas City, January 11-15, 1909, as follows: 2d cock, 2d hen, 1st and 3d cockerel; 1st, 3d, 4th and 5th pullet; 1st pen; club special for shape on female and all color specials; silver medal for best Barred Rock cockerel shown; state special for best cockerel shown in the American class. Theodore Hewes, judge. Sixty in Buff Rock class.

George Hartley & Son, of Trenton, Ill., won at Clinton County Poultry Show, Trenton, Ill., January 7, 8, 9, 1909, as follows: Rhode Island Reds—Single Comb, 1st, 2d cock (no cockerels shown by us); 1st, 3d, 4th hen; 2d pullet; 2d pen. Rose Combs—1st cockerel; 1st, 4th pullet; 1st pen and 6th and 8th special R. I. Red Club badges. Seventy-four Reds exhibited at this show. Stanfield, judge.

Sharples Dairy Tubulars have the finest known method of oiling. The driving gears, and the ball bearing which supports the bowl, are enclosed in the head of the machine. A spoonful of oil is simply poured into the gear case once or twice a week. The lower gear wheel dips into this oil and throws it in a spray over all the gears and the ball bearing. The oiling is perfect, is never forgotten, causes no trouble. All running parts are easily reached simply by lifting the gear case lid.

THE GREATEST CREAM SEPARATOR Money Can Buy

Sharples 1909 Tubular "A" Cream Separators are positively unequalled. Money can not buy, nor experience recommend, any other as good.

We have manufactured cream separators for 29 years. After making common "bucket bowl" separators for 20 years—the kind all other separator manufacturers still make—we discovered that no "bucket bowl" separator can ever prove entirely satisfactory. The bowls in all common "bucket bowl" separators are built and run up-side down, exactly contrary to the law of gravity and every law of mechanics.

To overcome this fault; still found in all other separators, we invented, patented and manufacture the

Suspended Bowl Sharples Tubular

The Tubular has been on the market about ten years, is built in the biggest, finest separator factory in existence and is sold in great numbers all over the world. We also have Tubular factories in Canada and Germany.

Sharples 1909 Dairy Tubular "A" Separator has handsome, one piece frame equipped with plumb bob for quickly leveling the separator and keeping it level. It has waisted low supply can; enclosed, dust proof, self-oiling gears; light, bottom fed bowl, hung below a single ball bearing. The bowl has no complicated inside parts. The Tubular is extremely simple and practical, is washed in 5 minutes, is approved by all women as easiest cleaned, turns easiest, skims fastest and best, wears longest. Look at pictures, then write for Catalog No. 205.

The Sharples Separator Co.

Toronto, Can. WEST CHESTER, PENNA. Portland, Ore.
Winnipeg, Can. Chicago, Ill. San Francisco, Cal.

The unequalled simplicity and perfect construction of Sharples Dairy Tubulars make them wonderfully light running, surprisingly convenient, remarkably durable, surpassingly efficient. Every Tubular is guaranteed forever against all defects in material or workmanship. Medium size Tubulars can be turned by one who is seated.

The Rayo Lamp

Unequalled for its bright and steady light, simple construction and absolute safety. Has latest improved burner. Made of brass throughout and nickel plated. Every lamp warranted. Write to nearest agency if not at your dealer's.

on your poultry fence by using a lesser number of posts and no top or bottom rails. A 4-ft. fence without top rail is as good as a 6-ft. fence with top rail.

M.M.S. POULTRY FENCING saves 50%. It will not sag or sag, has 1 1/2-inch mesh at bottom. A cable every foot in height, giving additional strength. Write us, we will tell you about our poultry, field, hog and lawn fence, also our **Ranger Humane Revolving Barb Wire**.

DEKALB FENCE CO.,
De Kalb, Illinois.

THE AMERICAN POULTRY JOURNAL'S REPRESENTATIVE, C. W. ZIMMER, VISITS MR. W. H. WIEBKE, THE BROWN LEGHORN SPECIALIST, FT. WAYNE, IND.

Mr. Wiebke is an old and well-known breeder of Brown Leghorns, having made a specialty of this variety for many years and enjoys the confidence of his brother fanciers, they having conferred upon him the honor of electing him northern vice president of the Brown Leghorn Club for the past three years, and he has just been elected to serve another year.

To say Mr. Wiebke breeds good birds would be stating it too mildly, for he simply breeds some of the best Leghorns in the country. His birds are remarkably true in Leghorn type and they invariably win the shape specials wherever shown. Not only for Mr. Wiebke, but for his customers; not only for those who buy stock, but also those who buy eggs, and not only in "local shows," but in the hottest classes in the best shows in the country, including such shows as Madison Square Garden, where he won 1st cock, 3d pullet; at Boston, 3d and 5th cockerel, 1st, 2d and 5th cockerel, 3d and 6th hen; at Chicago, 1st and 2d cock, 2d and 3d cockerel, 1st pullet, 1st pen, 15 specials. The Indianapolis Show, 1st cock, 1st cockerel, 1st pullet, 1st pen.

Winings like the above at these shows of national reputation place the quality of Mr. Wiebke's Leghorns beyond dispute.

We said they won for his customers. Well, here is one customer's report—we saw the letter. This party purchased for a nominal sum one cock, one hen, one cockerel, one pullet and exhibited them at seven shows, winning on cock, seven 1sts; hen, two 1sts, four 2ds; pullet, two 1st, three 3d; cockerel, four 1st, three 3d. We call this a record breaker. Well, Mr. Wiebke raises enough good ones, he always has some to sell. He practices double mating and has six fine pens mated for exhibition cockerels and five fine pens mated for exhibition pullets.

His yards contain many of the prize winners mentioned and we can assure you you get just what you order and the same eggs Mr. Wiebke hatches his own winners from. We have personally known Mr. Wiebke for many years and can cheerfully recommend him.

He has been a constant advertiser in the American for the past ten years and reports it his best business bringer. You should have his circular; it is free for the asking.

CHEAPER FEEDS IN SIGHT.

There is probably no other part of the poultry business that requires a more careful study than the feeding question. A reduction of 10 per cent in the feed bill may appear small on a single order of feed, but in the feed for a flock of, say, 100 fowls this would mean a saving of \$15 per year.

The Van Wie poultry supply house, whose ad appears in this issue, can supply your needs in poultry feed and will save you from 10 to 20 per cent over the price you have to pay your local dealers for an article in many cases much inferior. They buy in very large quantities and have customers throughout the entire United States. Everything they handle is guaranteed to be the best in its respective line and anything not exactly as represented may be returned at their expense. It will pay you to look them up.

Mr. Aug. D. Arnold writes us that eggs he sold to his customers last season have done wonders all over the United States and Canada. Three of the best cockerels shown in three of the best shows in the state of New York this season were from eggs he sold. He states his matings this season are far ahead of those of last season. He states there is exceptional strong interest in Columbians the past month and that the egg trade business is great.

A. A. Lee, Painesville, Ohio, breeder of S. C. Buff Orpingtons, reports the following winnings: At Ashtabula, Ohio, December, 1908: First, 2d, 3d, 4th hens; 1st cock; 2d, 3d, 4th cockerel; 2d, 3d pen. Kummer, judge. At Youngstown, Ohio, January, 1909: Second cock; 3d, 4th hen; 4th pen. Stanfield, judge.

THE OLD RELIABLE LAMBERT'S DEATH TO LICE

POULTRY FANCIERS AT CIRCULAR BEE.

Edward T. DeGraff Entertains Chicken Breeders, Who Labor While Enjoying His Hospitality.

About thirty of the prominent local poultry breeders of Gloversville, Johnstown, Schenectady and Ballston, together with the local fanciers, met at the DeGraff poultry farm one evening recently for the purpose of mailing DeGraff's 1909 circulars for advertising purposes. Ten thousand circulars were folded and stamped, ready to mail, all of which are to be sent to addresses received during the last year's correspondence. After the work was completed, a bountiful spread was given, and the old DeGraff homestead was a scene of good fellowship, as in days of a hundred years ago, when the early settlers, interspersed with the original reds, used to gather around the fireplace and make merry, instead of the now popular Rhode Island reds, which are fast coming to be the most popular fowls of the day.

This farm is a good example of what systematic advertising can do in the mail order business, as it is known all over the world, and both eggs and stock are being shipped seemingly impossible distances for such products. Mr. DeGraff has orders now for Hawaiian Islands, Montevideo, South America, England, Ireland and Russia, besides nearly every state in the Union and Canada, and is now 2,000 eggs behind orders, even at the present high prices.

DeGraff's Book on Reds is the finest poultry literature ever printed and will contain over \$600 worth of the very finest color printing possible to produce. To show that it is appreciated by the poultry fraternity he will have 2,000 copies sold before it is printed, although it is purely an advertising catalog. See his ad elsewhere in this issue.

EXHIBITION BARRED ROCKS.

One of the young Barred Rock fanciers, who made some of the older breeders stand up and take notice at the big Cleveland show, January 25 to 30, 1909, was L. E. Simmons, of Chicago, Ohio. Mr. Simmons had six entries and won four honors; second hen, fourth pen, fourth cockerel and special on pullet, and it was by mere chance that he missed first pen and first cock. He made his "first attempt" in fast company at the Ohio State show, Columbus, 1908, and won the coveted first pen, fifth pullet and gold special. Mr. Simmons breeds the noted E. B. Thompson strain in their purity. Judging from his display at Cleveland he has an eye for colors, all of his birds showing the dark, down-to-the-skin narrow barring, which has become so popular in the last two or three years. Mr. Simmons does not claim to be one of the "big" breeders, but from what we are able to learn he has the true conception of a Barred Rock, and he breeds the very best stock obtainable and fulfills every promise made to his customers. We shall expect to hear from him in one or more of the big shows next season. Write him and mention American Poultry Journal.

We take pleasure in announcing that Andy Smith, whose ad appears in another column, has again made a good record with his birds in the show at Sylva, Ohio, where he carried off seventeen prize ribbons. Mr. Smith has been breeding fancy poultry for some six or eight years, but made his first appearance in the showroom this season. At the four shows which he attended he has won some seventy prizes, besides silver cup specials. That first prize cock (Wyandotte) and cockerel (S. C. Rhode Island Red) at the Toledo and Lorain and Sylva shows are a credit to any breeder and yard, and we have no doubt that he will be heard from again another season, with better birds, judging from his past success.

Robert D. Parmenter, Knoxville, Ill., breeder of S. C. White Leghorns exclusively, has made a wonderful record at the shows this season. He has mated up some grand pens for the egg trade and is now prepared to take care of all orders promptly. If you give him a trial we know you will not be disappointed. Write him for his mating list and mention American Poultry Journal.

BABY CHICKS

that grow to be prize-winning show birds. FAMOUS OHIO Brooder develops chicks quicker than others. PURITAN CHICK Food saves ALL the chicks. They can't die. SIMPLICITY Non-Freezing Fountain, guaranteed the best made. CORRUGATED Card Board Shipping Boxes sold at reduced prices. DISINFECTING Nest Egg exterminator, ticks and vermin. HUNDREDS of other specialties for sale at money-saving prices. CATALOGUE for 1909 heaping full of information. Price 25 cents, coin preferred. Just what you need. W. W. Whiton, the expert poultry judge of Wakenau, Ohio, says: "The 100 R. C. Brown Leghorn one-day-old chicks arrived in good order. Followed your directions as to feed and raised 87 to maturity, which was very pleasing to us, 43 of them being pullets."

Free Cement and Special Roofing Nails included in each roll. Hammer quickly lays it.

How To Test Any Roofing

FIRE

Don't pay out good money for roofing until you first test the roofing you're going to buy. This applies to Vulcanite as well as to all other roofings. We want you to test it against heat, fire, cold, acid, water and anything else you like. Bend it—twist it—try to tear it. Compare it with any other. You will know absolutely then, there is none as good as Vulcanite.

WATER

Has Stood the Tests for 60 Yrs.

HEAT

Vulcanite ROOFING

Best by Any Test

ICE

is coated with a mineral product that does not freeze nor crack in winter, nor crumble and peel off in dry weather; it is absolutely water, wind, acid, weather and fireproof. For farm buildings and outhouses **Vulcanite Roofing** is the favorite of the farmer who figures cost by years of service and not by the first cost. Any handy man can lay Vulcanite Roofing. Caps and Cement come with every roll—so all you need is a hammer. Once on, Vulcanite stays on for good.

It will pay you to learn more about Vulcanite—the roofing with 60 years' experience in every roll. A postal will bring you a sample with which you can make the tests—also our free book which gives interesting facts about roofing. Write today. Sold by dealers. If you can't supply you write us.

Mica Axle Grease.

Kills friction; stops wear; makes
a two-horse rig run with one-
horse power.

MICA Axle Grease

contains powdered mica which coats
the axle with a non-friction
surface—that's the *why* of it.

No grease helps as much
as Mica Axle Grease.

If you try it, you'll
know it.

Ask your
dealer.

STANDARD OIL COMPANY
(Incorporated)

SHOEMAKER'S BOOK ON POULTRY AND ALMANAC FOR 1909.

There is nothing in the world like it. It contains over 200 large pages, handsomely illustrated. A number of most beautiful Colored Plates of Fowls, true to life. It tells all about all kinds of **Thoroughbred Fowls**, with life-like illustrations, and prices of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Foultry Houses. It tells all about

Incubators and Brooders.

It gives full instructions for operating all kinds of Incubators. This chapter is marvelously complete and worth dollars to anyone using an Incubator. It gives descriptions and prices of Incubators, Brooders and all kinds of Poultry Supplies. In fact, it is an encyclopedia of chickendom and will be mailed to anyone on receipt of only 15 cents. Your money returned if not pleased. **C. C. SHOEMAKER, Box 805, FREEPORT, ILL.**

THE WALTER HOGAN SYSTEM, \$2

Pick the best and poorest hens—pullets—cockerels—and save much money in feed and care. It's ruinous to winter the no-accounts. Cull your flocks with certainty. This system of selection instructs you how to do it—surely. Its latest and most conclusive test was 1½ years at the California State Experiment Station. Detailed report, testimonials and proofs free; or, send \$2 and your promise to keep it to yourself, and get at once the **Original System, 1908 edition.**

Write to-day.

THE WALTER HOGAN CO.
17 National Bank Bldg., Fergus Falls, Minn.

HOW AN INCUBATOR IS MADE.

An incubator factory is a mighty interesting place. Recently in Quincy, Mr. Ertel showed me his plant and how they do a few of the things which finally turn out a hatching machine. Perhaps what I saw may be of benefit to American Poultry Journal readers.

The history of the firm is a story of how a big business has grown from a humble beginning.

Back in 1867 the father of the present Mr. Ertel started making incubators, and the business has been growing ever since—a new shop one year, another building the next, and so on. Now the firm makes the largest shipment of incubators and brooders ever handled in one day, over 600 machines—five carloads. The next year they break their own record and ship six carloads in one day.

So the Ertel name is known from one end of the country to the other. This account of where their machine was made will seem like a letter from home to thousands of readers of American Poultry Journal who are using Ertel machines.

here they are turning out the legs. On that intricate mortising and tenoning machine over there they are preparing the pieces which will be the frames of the doors.

What impresses one most is the care given every part.

Nothing is too small to be watched and tested before it is passed to the finishers and varnishers. This, of course, is the last step, and comes after the large erecting shop where the different parts are assembled and put together, and the machine assumes a completed look. Here is where the copper tanks and boiler, the lamp and its bracket, and the delicate regulator are all put in. The egg trays and turning device are worked and tested, and the machine is rolled on into the paint shop.

In the office we found a force of clerks looking after the wants of customers spread all over the world.

Some of their letters told real amusing experiences, and we had to laugh over the funny side as told by some of the writers. Other letters were of grateful appreciation of the Ertel machines,

COLUMBIAN WYANDOTTE PULLET.

Virginia Bell, first Allentown, first Hagerstown, first Richmond, first Baltimore. Bred and owned by H. D. Brinser, Manchester, Va.

I watched the building of an incubator from the rough lumber to the finished and varnished machine ready to ship.

We saw the lumber passing its final inspection before it went to the Ertel saws. It had been inspected when Ertel bought it two years before, and it had been drying and seasoning during all the time since. The Ertels do not believe in using green lumber. They won't send out a machine which will crack, or check or warp, because the lumber in it did not have a fair chance to cure. I could not tell why some of the boards were thrown out, but Mr. Ertel explained that nothing which showed the least defect was let go through.

We walked among the saws, planers and boring machines, following the different operations which change the rough board into a piece ready to go into its place in the finished machine. On a lathe

and told how an incubator or two had helped swell the family income and made life easier and provide little extra luxuries.

So the incubator man feels, too, the joy of being of benefit to somebody else.

**F. GAGE CUTLER, CARTHAGE, ILL.,
BUYS C. W. ZIMMER'S STOCK
OF ROSE COMB REDS.**

This strain of birds has been very carefully bred by Mr. Zimmer for some nine years and has something like 150 premiums to its credit. Mr. Zimmer will breed Single Comb Reds exclusively hereafter and sell all his best birds to Mr. Cutler. Parties desiring good R. C. Reds can get them of Mr. Cutler. He has a fine catalog, which is free. Send for it.

THIS IS SAM THOMPSON.

Sam Thompson makes good incubators and brooders at Fairfield, Neb. Many of our readers know Sam Thompson well because they own one of his good incubators and brooders. If you are not yet acquainted with him and his machines you're missing something. Everybody nearly for miles around Fairfield, Neb., knows Sam for two good reasons. First, because he makes as fine an incubator as there is on the market. Second, because he treats everybody who deals with him fair and square always and people generally like to know that sort of man. We would like you to know Sam Thompson and all about his machines. Just write him today and ask him for his new catalog.

The Fairfield Incubators and Brooders which he sells are made at Fairfield, Clay County, Neb., the greatest incubator section in the world. They take their name from the town where they are made. It's a good town with lots of enthusiastic poultry raisers in and around there and they all know Sam Thompson and most of them use his machines.

Mr. Thompson has been making and selling incubators for years. There are thousands of his machines in use in all parts of the country and owners of them speak very enthusiastically of the splendid results they get with them.

Of course, if you are in the poultry raising business for a profit you either own or intend to buy an incubator and brooder. In that case, don't hesitate to get acquainted with Sam Thompson. He

will be glad to send you his big new illustrated poultry book and catalog to you free. He will also take all the risk of his incubators and brooders pleasing you, for he sells them on a very liberal plan, giving you two hatches to test them.

Mr. Thompson says, "You're killing the hens that lay the golden eggs all right when you set them to hatching." That is an original as well as a very good way of expressing it. You can make more money in the chicken business by using an incubator to do the hatching and keeping your hens busy laying eggs by far than you can setting your hens, especially when eggs are selling at 30 cents to 45 cents a dozen.

Educate your hens to lay in the winter and spring, when eggs bring these high prices, then buy an incubator for hatching your chickens for you. A good incubator will do the hatching of ten to thirty hens a lot better and cheaper, and every poultry raiser knows they are a lot easier to watch. This is good advice not only from a man who makes incubators to sell, but from the poultry raisers who own an incubator and are making lots of money in the chicken business. And they ought to know.

Just write Mr. Thompson for his catalog telling all about the Fairfield incubators and brooders. Address him as follows: S. C. Thompson, Mgr., Nebraska Incubator Company, Fairfield, 217 Main Street, Neb.

Chas. E. Vass, Washington, N. J., the well known breeder of Orpingtons, reports that he can spare a few more of those grand breeding birds at reduced prices, and that he is in a better position than ever before to furnish eggs for hatching from high class stock. Mr. Vass is one of the oldest breeders of Orpingtons in this country and is a substantial business man in Washington, N. J., and he takes great pride in satisfying every customer. Write him for what you want. Mention American Poultry Journal.

Bromo-Seltzer, that world-famed relief for sick headache, can be procured at any drug store. It is a never failing remedy for sick headache, mental exhaustion, nervous dyspepsia, disordered stomach, etc. It makes a very pleasant drink and gives almost instant relief. Try a bottle and be convinced.

CHICAGO WINNERS 1000 BUFFS THAT ARE GOLDEN 1000 MINNEAPOLIS WINNERS
Orpingtons, Rocks, Wyandottes, Cochins, Leghorns, Turkeys, Bantams and Water Fowls. At Chicago, Minneapolis, St. Paul and State Fairs, our unbeaten winners broke all records with over 2,000 prizes to their credit. Prize breeders and show birds at low prices. ORIGINATORS

— OF ALL THE —
ORPINGTON FOWLS

BOX A

SCOTCH PLAINS, NEW JERSEY

Another Unbeaten Record....

Nineteen firsts, ten seconds, numerous cups, medals, etc., won by us at Madison Square, 1909; more than five times as many firsts as any other breeder, thus winning 90 firsts and 68 seconds at five showings at Madison Square, naturally proving that we, as the originators of all the Orpingtons, have the best. Recognized headquarters for the best Orpingtons.

Eggs from the finest Orpingtons in the world, including the above and numerous other winners at New York and the Crystal Palace, only \$10 a setting. Why pay more? From grand stock, \$5 a setting.

All varieties Buff, Black, White, Diamond Jubilee and Spangled Orpingtons. Several thousand of the World's Best Orpingtons always for sale. Write requirements. Send for our illustrated catalogue, free, with history of the origination of all the Orpingtons.

Remember that COOK Orpingtons are the BEST, and if they carry that name it is a sure sign of quality, size, hardiness and marvelous laying qualities. Ask the people who own them.

Our Orpingtons have won all the official laying contests. Inspection invited. Trains met. Advice free. Satisfaction and safe delivery guaranteed on all birds and eggs shipped. Every order receives Mr. P. A. Cook's personal attention.

GLEN EYER POULTRY FARM

New home of King's famous winning strain of Barred Plymouth Rocks have moved over only some select stock. Mating list now ready, gives description of new plant and the very best matings that I have ever bred from. Don't forget my new address.

O. L. KING Glen Eyer Poultry Farm Rockford, Ill.

BUFF ORPINGTONS WYANDOTTES

100 head of fine birds in each variety yet for sale. MY TOLEDO WINNINGS on Orpingtons are first cockerel; first and third hens; second, third and fourth pullets and first pen. In Buff Wyandottes I won first, second and third cocks; second and third cockerels; third, fourth and fifth hens; third pullet and first pen. These winners mated for best results will be found in my pens. Eggs \$2.50, \$3.00 and \$5.00. Send for free catalogue and order early. **KORDEE POULTRY FARM, Box 33, Prairie Depot, Ohio.**

BARRED ROCKS

I breed Rocks that have that bright, snappy COLOR and even barring that is so hard to get and I also have large size and correct type. I WON BARRED ROCK LOVING CUP at Columbus last year. Have a long list of winnings for several years. I can supply you with exhibition birds or breeders to improve your flock. Both cockerel and pullet line. Write me today.

GEO. W. BACHMAN

North Baltimore, Ohio

COREY'S GLOWING STRAIN OF BUFF PLYMOUTH ROCKS The Champion of New England

As a breeder and exhibitor of Buff Rocks for twelve years, my past and present winnings make the above statement an acknowledged fact. At the great Boston Show, January 12-16, 1909, on eleven entries my Buffs won fourteen ribbons and all association cash specials for best display, best cock and four hens; best cockerel and four pullets; also winning the State Cup for best cock, hen, cockerel and pullet; also the District Cup, comprising all the New England states, for best cock, hen, cockerel, pullet and pen. This is acknowledged to be the grandest victory ever won at Boston on Buff Rocks.

I have bred and sold winners all over the Union. They have been sold and shipped to Japan for government breeding purposes. I bred and sold the second pen at the World's Fair, St. Louis, and many New York winners, and "best of all, I breed all my winners."

Shall have a few settings from these winners for sale at \$5.00. A limited number for sale. Would advise placing your orders early. Circular free. Address

M. J. COREY, 900 Summer Avenue, Springfield, Massachusetts

Winter Eggs--How to Get Them

What is the reason that good feed and care will make cows give milk in winter, and yet why is it that good feed and care will not make chickens lay eggs? We know why and will be glad to tell you. We have a method of making chickens lay eggs in winter. If the old fowls are healthy and the pullets are old enough to lay eggs, we can do the trick within two weeks' time.

Our method is simple and cheap to use. There is no special equipment and expensive poultry house connected with it. A full explanation by us tells you why eggs are high in winter and low in warmer weather—tells you why setting hens are worth from \$1 to \$1.50 each early in March and April and are worth but twenty-five cents each late in June and July.

Let us explain to you how eating BODY LICE make fowls and chicks have colds, cholera, diarrhoea and roup. Our method of handling the poultry business produces instant results from the start. Is that not what you want? We can and will help you. Drop us a postal today.

SCHILD POULTRY SUPPLY CO.

;; CLEVELAND, OHIO

A Wolverine Strain Winner

White Plymouth Rocks

WOLVERINE STRAIN

At Detroit, January 9 to 14, 1909, won first and fourth cocks; first, second, fourth and fifth hens; first cockerel; fifth pullet; second pen; every possible special; two hens uncut for plumage color. 70 in class. McClave, judge. At Boston January 1909, won third cock, second cockerel, fourth hen and fourth pullet. Schwab, judge.

LYMAN H. HILL
Sta. 3, Jackson, Mich.

A HARBINGER OF GOOD TIMES.

The bright outlook for business conditions all over the country is not a new thing to the farmer. His prospects were brightened long ago by the invention of wonderful labor-saving and time-saving implements, which have enabled him to increase his yield and market his output with corresponding increase of profits, despite depressed conditions in the industrial world. People must live, and to live they must eat. Whatever else they are compelled to do without they cannot do without food, so that whatever adds to the efficiency of the farmer in his food-producing vocation adds to his blessings. One of the most important factors in bringing about this condition was the invention of Planet Jr. Farm and Garden Implements. They have revolutionized the slow, laborious old gardening and farming methods and have put them in the class of twentieth century achievements. As an instance, No. 4 Planet Jr., which is a combination hill and drill seeder, wheel hoe, cultivator, furrower and plow, is the most complete tool a farmer or gardener can have on his place. He can do more work with it and keep things in better condition in one-sixth the time it would take without it. The No. 4 is only one of the many Planet Jr. implements—there is one for every farm and garden task, whether for hand or horse power—and all of them are sold with an iron-clad guarantee of absolute satisfaction.

S. L. Allen & Co., Box 1107T, Philadelphia, Pa., who make these implements, have issued a handsome 56-page illustrated catalog for 1909, which they are sending out to any one interested in better farming methods and labor-saving devices.

BABY CHICKS.

While the shipping of baby chicks has been an innovation with the American breeders the past few years this method of dealing in thoroughbred poultry has been practiced in England for many years. There seems to be quite a difference of opinion as to how great distance Day-Old Chicks can be shipped in safety. Last year the Goshen Poultry Yards, of Goshen, Ind., informed us that they sent a customer in Colorado Springs, Colo., a shipment of twenty-five Black Orpington chicks, which is a distance of over 1,200 miles. These chicks not only arrived alive but in first class condition, and the party was successful in raising them all to maturity, every chick producing a large, healthy, strong bird. Of course, much depends upon the method of shipping and the location of the breeder and the advantages he holds in regard to shipping facilities.

The Goshen Poultry Yards have their hatchery located within 500 feet of both depots at Goshen on two of the best trunk lines in the United States, and this, of course, enables them to have their chicks started on their journey within one hour of the time they left the incubator.

This firm breeds ten standard varieties and the chicks are all guaranteed to be from extra choice stock, no culls among them. Send for their Chicklet Catalog and find out more about the method of doing business. Address Goshen Poultry Yards, Goshen, Ind.

CERTIFICATE OF SALE.

This is to certify that we have sold our entire stock of S. C. Black Orpingtons, including all Madison Square and Chicago winners, to Will H. Schadt, Goshen, Ind., whom we heartily recommend to all intending purchasers.

We have deemed this step advisable on account of our large winnings at the recent New York show on S. C. Buffs and will now devote our entire time and energy to the breeding of our famous strain of Buffs exclusively. Thanking our past customers for their liberal patronage, we remain, Yours for success,

J. M. Williams & Co.

Louis Rausch, proprietor of the Creve Coeur Poultry Farm, Creve Coeur, Mo., reports that he has mated up eight grand pens of Barred Plymouth Rocks, four for cockerels and four for pullets, and is now prepared to take care of all orders promptly. Mr. Rausch has produced many prize winners during the past few years and is now willing to furnish our readers with the results of his labor at a very reasonable price. Write him and mention American Poultry Journal.

BIG ORPINGTON TRANSFER.

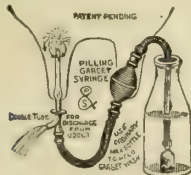

Mr. Will H. Schadt, of Goshen, Ind., has purchased the entire flock of S. C. Black Orpingtons recently owned by J. M. Williams & Co. In this sale is included the first prize pen at the recent Madison Square Show, first Chicago cock, 1907, and many other noted winners, and is, no doubt, the best flock of S. C. Black Orpingtons in America today. Mr. Schadt has built up a large business in the past with his famous strain of Buffs, known the world over as "Schadt's Prize Winning Strain," and up to this time has enjoyed the reputation of being the largest exclusive breeder of Buffs in America. He informs us that he has culled very closely this season, having only five pens of Buffs and five pens of Blacks, but the birds in these pens are of the quality that is bound to produce many of the winners for the large shows next season. If you are interested in Buff or Black Orpingtons it will pay you to send for his new 1909 mating list, which is of interest to any one breeding Orpingtons.

THE UHL HATCHERY.

The Uhl Hatchery, New Washington, Ohio, make a specialty of pure-bred day-old chicks. This is their ninth season, which is proof that they know their business. Last season they hatched 107,500 and expect to hatch many more this season, as they have increased their capacity to 1,400 chicks per day. They have twelve varieties to select from, which include S. C. Brown, White and Buff Leghorns; Barred, Buff and White Plymouth Rocks; White, Silver and Partridge Wyandottes; Buff Orpingtons, Black Minorcas and R. I. Reds. If you want strong, healthy chicks, write for free catalog and mention American Poultry Journal.

THE PILLING GARGET REMEDY.

The Pilling Garget Outfit has saved hundreds of cows affected with that scourge of the dairy. It is very "Easy to Use," requiring no veterinary knowledge. It's cost is only \$4 delivered at your door, and after once using it you

would not be without it at any price.

All of the Pilling Cattle Instruments are "Easy to Use" and should be in the hands of every cow owner. Why not send today to G. P. Pilling & Son Company, Arch St., Philadelphia, Pa., asking them for this pamphlet?

For twenty years Will Welch, Edon, Ohio, has bred fancy poultry and today he stands at the top in producing good Partridge Wyandottes, as his show record will show. His latest winnings were at the Williams County Fair, where, on four entries, he won 1st and 2d cockerel, and 1st and 2d pullet. Again, at Edon, Ohio, January 5-8, 1909, 1st cock, 1st cockerel, 1st hen, 1st, 2d, 3d and 4th pullet; the ten highest scoring Partridge Wyandottes and special for highest scoring bird in the show; with only 10 birds entered. He is selling eggs from pen scoring; cock, 93; hen, 92½; pullets, 92¾, 92¾, 92¼, 91½, 91½, 91¼, 91, 90½, 90¼. This is correct score of birds in competition. Write to him now for circular. He breeds for quality, not quantity.

Ferris Poultry Farm, 555 North Union, Grand Rapids, Mich., won at Grand Rapids Poultry Show, January 28-February 4, 1909, as follows: 1st, 2d, 4th cock; 1st, 2d, 3d, 4th hen; 1st, 2d, 3d, 4th cockerel; 1st pullet; 1st hen. Jas. A. Tucker, judge of S. C. White Leghorns. He also won five prizes on six entries at the late Toledo show, including two 1st, one 2d and two 3d.

Manverse & Rasch, of Trenton, Ill., won at St. Louis, Mo., November, 1908, as follows: Second pen, 4th cock, 3d pullet and silver cup for display White Wyandottes; Campbell, judge, at Trenton, Ill., January, 1909: First and 2d cock; 3d cockerel; 1st, 2d, 3d, 4th hen; 1st and 2d pullet and 1st breeding pen. Stanfield, judge.

Blanchard's Rose Comb Rhode Island Reds

Winners at Chicago, Rockford, Illinois, and elsewhere. Eggs \$3.00 and \$2.00 per 15; utility 8c each, incubator \$5.00 per 100. Five mated pens besides utility yards. A. W. BLANCHARD, Beloit, Wisconsin.

FERRIS' S. C. WHITE LEGHORNS.

In another part of this paper will be found the advertisement of The Ferris Poultry Farm, Grand Rapids, Mich. This farm makes a specialty of breeding S. C. White Leghorns, the fowls that are known as egg machines. Mr. Ferris, the proprietor, has been breeding this variety for years, and his stock is noted for size, health and vigor. They are raised on free range and great care is taken that no weak or unproductive stock is used in the breeding pens. That the stock on this farm is bred up to standard requirements is proven by the big winnings they have made at such shows as Chicago, St. Louis, Detroit, Grand Rapids and the Michigan State Fair. For the egg trade he has mated up some grand pens and is guaranteeing a fertility of 90 per cent, and for the quality of his stock the prices are very reasonable. He is also selling day-old chicks at \$16 per hundred and guarantees safe arrival. His large 24-page catalog tells all about his stock and how he does business. Send for one and mention American Poultry Journal.

VISITS H. F. KENNERK AT
FT. WAYNE, IND.

Mr. Kennerk has recently moved to his suburban home, along the Huntington electric line, where he will engage in the poultry business on an extensive scale. He has an "ideal" location, having several acres of sandy soil, with sufficient south slope to drain well. Mr. and Mrs. Kennerk are old "poultry fanciers" and know how to breed thoroughbreds, having done so for many years. They have good stock, mated right and results are assured. Customers can depend on being treated right by Mr. Kennerk and he is anxious to hear from you. His ad appears in this issue.

BILL OF SALE.

To whom it may concern; Be it known that I have this day, for value received, sold to Wm. H. Klug, 895 Seyburn Ave., Detroit, Mich., my Single Comb Rhode Island Red Cock known as "Red Raven" 3d. This bird was sired by Red Raven 2d, who was in turn sired by Red Raven 1st, which bird, beyond a doubt, was the most wonderful specimen of his day, being scored to 95%, under several prominent judges, winning 1st and color and shape.

This bird has proven his quality by winning 1st as cock at Indianapolis, 1908, in the hottest class of Reds that has been gotten together in many years. He is a tried breeder and I can recommend him to parties desiring good Reds.

Respectfully yours,

Judge C. W. Zimmer.

Ft. Wayne, Ind., Feb. 6, 1909.

In a visit to Col. D. N. Foster's poultry farm, near Ft. Wayne, Ind., where he raises his famous "Duke of Kent" strain of S. C. Black Orpingtons, we were shown a letter from a southern breeder who had the "Duke of Kent" strain. This party writes: "Is as fine a lot of Black Orpingtons as was ever gotten together in the South, one crack pen being valued at \$500. I beat this pen, also won 1st and 2d hen, tying their best hen for third place. My cock scored 93½ points. One party showed 20 birds."

Mr. Foster considers the fact that his birds win for his customers his best advertisement. He has a beautiful chromo in three colors of the Duke of Kent, which he sends you free. His ad appears in American Poultry Journal.

We wish to call attention of the readers of American Poultry Journal to the ad of Messrs. Temple & Merriman, Route 5, Gouverneur, N. Y., breeders of White Ply. Rocks. They have been consistent winners in the past, and at the Gouverneur, N. Y., show just held they won five 1sts, two 2ds and one 3d on eight entries. Messrs Temple & Merriman are highly recommended to us and we believe they will give full value to every customer.

S. M. Dickinson, Granville, O., breeder of White Plymouth Rocks, reports the following winnings at the late Cincinnati show: 1st pen, 1st pullet, 3d cock, 4th and 5th hens, on eight entries. He has just issued his 1909 mating list, which will make very interesting reading to any one interested in White Plymouth Rocks. Better send for one today and mention American Poultry Journal.

HOW "FULL WEIGHT" BUILT A FACTORY.

We are all familiar with "full weight" as a wise and winning rule in the conduct of a grocery store. It is not considered bad form in a coal merchant nowadays to deliver 2,000 pounds in a ton of coal. Even the ice man, that much maligned person who is so often caricatured as slipping the day's supply of ice under the door or through the keyhole of the consumer, usually gives the city dweller all that's coming to him. And the milkman has long since found out that "short measure" soon leads him to the city inspector. But who ever supposed that "full weight" would come to be one of the deciding factors in the sale of an incubator? Who ever imagined that "full weight" would be the means of building a factory?

And yet that is just what "full weight" has done for the largest manufacturer of incubators in the United States today. When this man began making incubators, twenty-six years ago, he conceived the idea that an incubator to be "reliable" must be right in every detail, and that one very important detail in which incubators were not right as they were then made was in the weight and quality of the material used. He decided to use the best of material for the purpose and to make his incubator better and heavier than any other on the market. It is a significant fact that the Reliable incubator and brooder weighs, on the average, size for size, twice as much as most of the other incubators on the market. What does this mean? Simply this: there is twice the amount of material, packing, etc., in the Reliable incubator that is found in other makes. This means a more substantial, better made machine, with better packing, and better equipped for hatching purposes.

The result of this far-sighted "full weight" policy is seen today in a very striking fashion in the newest and biggest of incubator factories just completed at Quincy, Ill., for the Reliable Incubator and Brooder Company. This "full weight" factory, covering two and a half acres of ground, is built entirely of stone, and with its 40,000 square feet of space upon one single floor, it forms the largest factory in the world devoted exclusively to the making of incubators and brooding accessories. It is equipped throughout with the very latest of modern machinery. Each machine is run by an individual electric motor with direct attachment. A special steam drier dries and seasons every inch of material that goes into the Reliable incubator and renders it free from the annoying influence of weather and warp.

Advantage on the distribution side of the added to these unusual facilities for production, it will be noted from the accompanying cut that they have the added very best freight facilities, with individual railroad trackage throughout the grounds. So that no matter whether you want a single incubator or a carload lot, your order is attended to with equal promptness.

THE NEED OF PRINTED STATIONERY.

A very few breeders of fancy poultry realize the importance of first class stationery and circulars for use in answering inquiries, etc. They never let a few dollars stand in their way when purchasing a fine bird, but when it comes to printed stationery they never take into consideration anything but the price. They seem to overlook the fact that about the only method a prospective customer has of judging their stock is by the stationery they use. Poultry Post, of Goshen, Ind., makes a specialty of high grade job printing for poultrymen and yet their prices are extremely low, considering the quality of their work. By sending a post card anyone can secure a full line of samples of their work with prices and full particulars. Address them as Post Publishing Company, Goshen, Ind.

Edw. Beasley & Son, Thorntown, Ind., breeders of White Rocks, won at the late Indianapolis Show in a hot class of White Rocks; two prizes on three entries, 2d cockerel and 4th cock and at Lafayette, 1908, 1st cockerel, 2d hen, 3d pullet, 2d pen; at Darlington, 1909, won 1st cockerel, 1st and 3d cockerel, 1st pullet, 1st pen; at Advance, 1909, 1st cockerel, 1st hen, 2d and 3d pullet, 1st pen; club ribbons and silver cup on best cock. These winnings speak well of the quality of Beasleys White Rocks. See their ad elsewhere in this issue.

COLUMBIAN WYANDOTTES

At Cincinnati, January, '09, I won 1, 2 cock, 2, 5 chl., 5 hen, 2, 4 pullet, 1 pen and specials. At Cleveland, '09, in competition with 12 noted breeders, I won 1, 3 cock, 1, 4 chl., 2 hen and 1 pen, winning more birds than all competitors combined. At Berea, Feb., '09, I won 1, 3 cock, 1, 2, 3, 4 chl., 1, 2, 3 hen, 1, 2, 3, 4 pullet, 1, 2 pen, silver cup for 10 highest scoring birds in the show, average score 94.4. Also silver cup for highest scoring pen in American class. Ira C. Keller, Judge. Stock and eggs for sale. Satisfaction.

VASS' Buff, Black and White ORPINGTONS

acknowledged the world best. Are you looking for eggs that will produce winners for next winter show? Remember, from setting of Black Orpington eggs I sold last spring a cockerel was hatched that \$100.00 was offered for this cockerel and the offer was refused. Remember my birds have won with different judges at America's leading shows like Pan American World's Fair St. Louis, Boston, Jamestown Exposition, Easton, Pa., and Madison Square Garden for the last nine years. They have stood the test for years and not only winning for me but in hand of many customers. A few choice large birds for sale reasonable. I am the oldest Buff Orpington breeder in the U. S. Egg orders booked now from the finest flock of Orpingtons in America. Write for prices. Booklet free. Satisfaction guaranteed. C. E. VASS, Washington, N. J.

Buff Orpingtons!

Silver Cup Prize Winners and Cleveland Winners. For the last four years and at the late show in competition with the best in the east, we won eight regular prizes on nine entries. We breed our winners and you will not be disappointed if you buy either stock or eggs. Seven grand pens containing my show birds mated to produce more winners. Mammoth Pekin Ducks that are mammoth, Six of them weigh sixty lbs. Eggs \$2.00 per 11. Send a postal for our mating list.

BUFF ORPINGTONS

Fifty Big Cockerels, Eggs and Thirteen Pens—Madison Square Garden, Boston, Detroit, etc., champion males head our pens containing 40 prize females, 150 breeders, scoring 90 to 94. Ten pens of Buffs, 2 pens Black Orpingtons, 1 pen Buff Cochins Bantams, 1 flock Pearl Guineas. Eggs \$1.50 to \$10.00 per setting. Fifty grand big cockerels must go at bargain prices, \$3.00 up. Beautiful illustrated catalogue free. Send postal. J. OLIVER WILLARD : : : : : LINDEN, MICHIGAN

The Battle at Madison Square Garden Is Over and Graves' White Rocks

are still in the front ranks. In the strongest competition ever shown I won the most coveted prize, first cockerel and special best colored male making twice in succession I have won first cockerel. First and second pullet, fifth pen. Silver cup best pair young, club specials best cockerel, best pullet, second pullet.

On our **White Wyandottes** in competition with the leading exhibitors we won fourth pen in class of twenty-four and fifth pullet. Send for mating list. Exhibition and breeding birds for sale.

Eggs from pen headed by first cockerel \$10.00 per setting. All other pens \$5.00 per setting.

W. R. Graves, Rte 3, Southboro, Mass.

The King Bone Cutter

Only One Size, \$6.75

This is the man who cannot make his machines fast enough to fill orders promptly. Looks like a pretty capable sort of a fellow too, doesn't he? Yes, but great as his ability has proven to be, the demand for his King Bone Cutter is much greater than his limited capital can possibly be made to fill. The last three annual poultry shows in Chicago afforded the best possible opportunity to demonstrate superiority as half a dozen of the best

bone cutters were cutting bones daily, and the "King" cut all kinds of green bones, meat, gristle, etc., fine enough for small chicks, and sold faster than all of the other bone cutters put together. Manufacturing capacity has been increased each year and very little advertising has been done, yet, during each busy season he has run two or three weeks behind orders. The King Bone Cutter is built on a new principle and **chops the bones**. The butcher's cleaver has long demonstrated that this is the easiest and quickest way of cutting them, but no one seemed to think of it, or else they were not ingenious enough to build a machine on that principle. Now that one inventor has done so with such remarkable success, others will probably try to imitate him. Therefore, he wants people in all parts of the country who will be enough interested to notify him promptly if imitators infringe his patent, and he thinks the best way to do this is to give a large number of people an opportunity to take a small financial interest in a company to be organized by him. Instead of paying commission to a money broker he will deal directly with you, and pay the freight on your bone cutter if you buy an interest in the company. In writing state whether you wish information on bone cutter only, or also regarding this opportunity to make a really profitable small investment which is safe, and still promises such unusually large profits.

GEM INCUBATOR COMPANY Box B Trotwood, Ohio

FROM THE ATLANTIC TO THE PACIFIC.

In the White Wyandotte class at the Prince Edward Island Poultry Association show, now in full swing at the Lyceum, H. E. Miller has carried off first cock, first hen, third cockerel and first pullet.

The old birds and the pullet Mr. Miller imported from Mr. John S. Martin, Port Dover, Ont., one of the world's leading breeders of Wyandottes, while he raised the cockerel imported from eggs from Mr. Martin.

This is a fine showing in so large a class and speaks highly not only of Mr. Martin's ability to breed, but also of his reliability to deal honestly with customers, no matter how far away.—Extract from Charlotte-town Patriot, January, 1909.

San Francisco, Cal., January 15, 1909. Mr. John S. Martin, Port Dover, Ont.

My Dear Sir: I am pleased to state that my anxiety was suspended this morning when the express company delivered me the bird. He certainly is a beauty and I wish to thank you for the selection.

Next month I am going to send to you for a pair of hens to mate with him. In case anyone out here asks for references you just turn them over to me, for I consider this youngster the best investment I have ever made in poultry.

You shall certainly hear from me again soon, so with best wishes I am,

Very truly,

A. L. Jenkins.

BILL OF SALE.

To whom it may concern: Be it known that I have this day for value received sold to William H. Klug, 895 Seyburn avenue, Detroit, Mich., my Single Comb Rhode Island Red Cock known as "Red Raven 3d." This bird was sired by Red Raven 2d, who was in turn sired by Red Raven 1st, which bird, beyond a doubt, was the most wonderful specimen of his day, being scored to 95% under several prominent judges, winning first and color and shape.

This bird has proven his quality by winning first as cock at Indianapolis, 1908, in the hottest class of Reds that has been gotten together in many years. He is a tried breeder and I can recommend him to parties desiring good Reds.

Judge C. W. Zimmer.

Fort Wayne, Ind., February 6, 1909.

J. Oliver Willard, Linden, Mich., breeder of S. C. Buff Orpingtons, starts advertising with us this month. He has mated up some grand pens for this season. Pen No. 1 is headed by the first prize cockerel at Madison Square Garden, January, 1907, the undefeated champion of the United States and Canada for that year, a wonderful bird and a still more wonderful sire. Mated to him are our champion hen, also the fourth and fifth pullets at Madison Square Garden, and five other prize winning females, all scoring 93 or better. Pen No. 2 is headed by the first prize cockerel at Boston, January, 1907, and second prize cock bird at Madison Square, December, 1907. He is the sire of six Boston and four Madison Square winners, besides many others. Eggs from these two pens, \$10 per setting. Eight other pens of Buffs, each headed by a prize winner, and every breeder scoring 91 or better. There are about 200 breeders on the farm that will score 90 or better. This past season they showed at Detroit and won second and fourth cocks, first and third hens, second cockerel, second, fourth and fifth pullets, first pen and eight specials. Also showed at Lansing, Jackson, Dowagiac, Ithaca and Flushing, and made strong winnings at every place. At Flushing won first, second and third cockerels, first, second and third hens, first, second and third pullets, first pen and specials; no cocks shown. He makes a specialty of exhibition color, size and type. Also has two pens of Black Orpingtons, Willow Brook strain; one pen of Buff Cochins Bantams; one flock of Pearl Guineas. Satisfaction is guaranteed. Infertile eggs may be replaced. Send for mating list and mention American Poultry Journal.

C. E. Greenawalt, R. R. 3, Hicksville, O., breeder of Buff and Black Orpingtons, sends us his mating list, which gives his winnings for the past season. Many of these were made in hot classes. Mr. Greenawalt must have confidence in the quality of his stock, as he offers to pay return charges and return the money where a customer is dissatisfied. He has a number of fine pens containing his winners mated for the egg trade. We suggest you send for his mating list and mention American Poultry Journal.

WHY DOES A HEN EAT BUGS AND WORMS?

Ever think of that? Ever think why a hen or a cock or a chick will scratch around and snap up every fat, juicy worm or bug that can be found? There's a good reason for this. The hen doesn't know why she does it; but day in and day out, in fair feather or foul, the industrious hen, together with all her relations, digs and digs, scratches and scratches after all the bugs and worms that can be dug up or found. Nature prompts the hen to do this because the hen needs what scientists call the protein that is found so abundantly in worms and bugs. This protein makes the white of the egg, or the albumen, the lean meat of all animals and a large proportion of the hen's bones and feathers. A hen cannot be a big producer of eggs unless she has a lot of this protein. The little chicks need it to make them grow; pullets and cockerels need it to make them develop; the cocks need it for vigor and vitality. Now, in the summer time the fowls can get plenty of this protein in the bugs, worms and insects that they dig up, but in the winter they must be supplied with protein. This same protein which is found in the bugs and worms that the hen picks up occurs even more abundantly in raw bones and gristle of

A prize-winning S. C. R. I. Red cockerel, having exceptional fine color and shape. Owned by E. M. Billings, Oberlin, Ohio.

beef, mutton and pork. Raw bone is the cheapest and the most productive of egg-making foods. The reason it is the cheapest is because it is the richest in the food elements which fowls need. Also because it costs very little to buy from the butcher and takes but a little time to cut up. All you need do to supply your fowl with plenty of life-building food is to feed them with fresh bones with the meat and gristle adhering, and cut this material up with Mann's Latest Model Bone Cutter, made by the F. W. Mann Company, of Milford, Mass. The machine is a very simple one. You simply put in the bones and gristle and turn the crank. It turns easily and cuts rapidly and has a self-governing feed which automatically adjusts the cutting to the strength of the person operating it. It takes in large-sized bones—can be kept clean with scarcely any work, requires little or no repairs and is so strong and durably made that it will last for years. Every poultry editor emphatically endorses raw bone as a great profit-maker to feed poultry. Some of the most successful poultry raisers in the country are doubling their poultry profits by feeding bone and gristle. The most successful poultry men use the Mann Bone Cutter because it is so easy and simple to operate and always does satisfactory work. It is sold on ten days' trial. If a man is not then satisfied with it it can be returned at the expense of the company. This is a generous offer and the manufacturers say that the only reason they make it is because of their confidence in the machine and the fact that users of it praise it in the most enthusiastic terms.

CONGO ROOFING

Backed by a Surety Bond

Hereafter every roll of Congo Roofing which we sell will be found to contain a Bond of the National Surety Co., guaranteeing the durability of Congo Roofing.

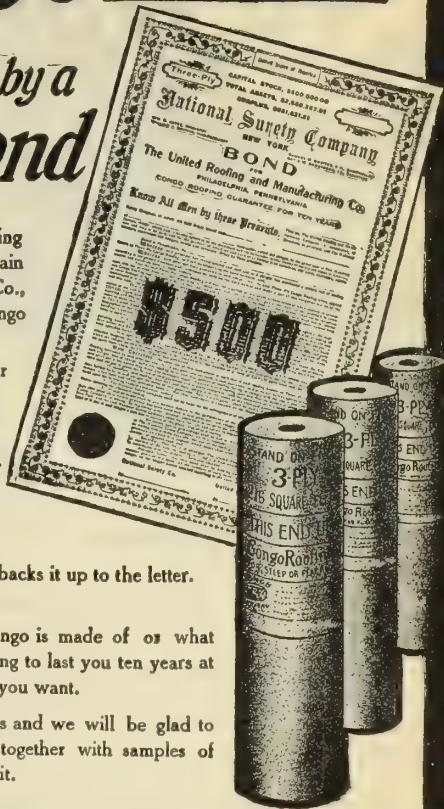

Our 3-ply grade is guaranteed for ten years and provides that if the roofing fails to give satisfactory service during that period, you are entitled to a complete new roof free of charge.

We cannot dodge this guarantee.

The Surety Company's capital backs it up to the letter. It gives you absolute protection.

You don't need to know what Congo is made of or what it looks like; you know that it is going to last you ten years at least, and that is the kind of service you want.

Let us have your name and address and we will be glad to send you a copy of the guarantee, together with samples of Congo and booklet telling all about it.

HOW TO RAISE THE CHICKS

It is no trick at all to hatch a hundred, two hundred, or even a thousand chicks, but the raising of them is an entirely different proposition. The average person is fortunate if he succeeds in raising over one-half the chicks he hatches. True, there are those who raise nearly every chick hatched, but they have made a study of the matter and go about it in an intelligent manner. Commencing with the March number, COMMERCIAL POULTRY will publish a series of articles on the subject of "Caring for the Chicks," written by poultry men and women in every part of the country who have been successful in raising chicks to maturity with little or no loss, and who have consented to tell the thousands of COMMERCIAL POULTRY readers exactly HOW THEY DO IT. These articles will be continued through the April, May and June numbers of the paper, and each one of them will be from a different state, so that the entire country will be covered by the fifteen or twenty articles that will appear. This series of articles will be worth thousands of dollars to the poultrymen of the country.

The publishers of COMMERCIAL POULTRY claim to have the most practical and interesting poultry paper published. It is filled from cover to cover with practical, interesting information for the poultryman, is nicely illustrated and well printed, with two-color cover. The regular subscription is 50 cents per year, but just now the publishers are offering free with each yearly subscription a copy of their famous book, "Poultry Lessons for the Amateur," one of the best books on the subject of poultry culture ever published, consisting of twelve complete chapters, and covering the subject thoroughly. Remember you get a copy of this book, postage prepaid, and a year's subscription to COMMERCIAL POULTRY for only 50 cents. The series of articles on "Care of the Chicks" will be worth many times 50 cents to you. Send us your subscription at once and get the complete series. Your money back if not satisfied. Address,

COMMERCIAL POULTRY, Dept. A, MARSEILLES, ILL.

N. B.—We will send COMMERCIAL POULTRY and any other 50-cent poultry paper published, each one full year, and include a copy of our book, for only 75 cents.

BONE CUTTER FREE

Every poultry-raiser needs a "Dandy" Green Bone Cutter. Cut green bone keeps fowls healthy, vigorous and productive. It is a wonderful food for increasing the egg supply and for pushing the growing chicks. The "Dandy" prepares the bone fresh every day—just right for feeding to best advantage. It feeds the bone to cutters automatically and is the easiest running, fastest cutter made. Write for catalog. STRATTON MFG. CO., Box 17, Erie, Penna.

15 DAYS

**"THIS IS
THE ROOFING
THAT NEEDS
NO PAINTING"**

THERE was a time when everybody bought roofings that required painting. It was the regular thing to do. In fact there was nothing else to do, for all roofings were "smooth surfaced" and required painting regularly to keep them from deteriorating.

Now there is *Amatite*, an improvement over painted roofings, having a *real mineral surface* imbedded in pitch—making a kind of flexible concrete.

This mineral surface needs no painting. The waterproofing material, Coal Tar Pitch, is the greatest enemy to water known. It is the base of many waterproof paints. Only in a paint the pitch is diluted and made into a thin film, whereas the *Amatite* waterproofing is *solid pure Pitch*—two layers of it. It would take something like a dozen coats of pitch paint to equal in thickness that upper sheet of pitch in which the *Amatite* mineral surface is buried. And under that heavy sheet of pitch is a layer of wool felt and under that another sheet of pitch, just as thick as the outer one. And below them all is an-

other layer of strong felt. That makes two roofs in one.

If the storms wore away the mineral surface and dug through the pitch and destroyed the felt, they would still be only half way through. And if the weather then removed the next sheet of pitch, you would still have left a final layer of felt—nothing more or less than an ordinary smooth surfaced roofing which could keep off the rain very nicely if painted every year or two.

But as a matter of fact, the weather never gets past that mineral surface securely gripped in its matrix of pitch.

The mineral surface is there to stay. No painting—no bother—no further expenses after the roof is once laid.

We should be glad to send you a free sample of *Amatite*, and you can see for yourself how much better it is than the smooth surfaced kinds.

BARRETT MANUFACTURING COMPANY

New York Chicago Philadelphia Boston St. Louis Cleveland Pittsburg
Cincinnati Kansas City Minneapolis New Orleans London

ONE AND ONE-HALF MILLION THERMOMETERS.

The Taylor Instrument Companies, Rochester, New York, manufacturers of the "Tycos" Thermometers, have in stock being seasoned not less than one and one-half million thermometer tubes for their various types of "Tycos" Thermometers.

Glass shrinks with age, infinitesimal in volume, but a factor of great importance in the tube of a thermometer, so in striving for every perfection in those of the "Tycos" brand every tube is laid away before using to thoroughly season.

The making of thermometers is most interesting, and in our trip through the home of the "Tycos" we were impressed with the great care and skill shown in each of the many processes through which they passed.

First the selection of the glass tubing, to be sure the bore (just large enough to take a human hair) is of uniform size throughout its length. Then the cutting into proper lengths, formation of the bulb, which must be just the right size to produce in connection with the size of the bore the range of scale desired; for, mind you, thermometers are made for every purpose from extreme refrigeration, 100 degrees below zero, and incubation at 103 degrees, to taking the temperature of escaping flue gases up to 1,000 degrees Fahrenheit.

After the bulb is blown the tube must be carefully exhausted of all air, and then each "Tycos" tube is put through a special process to insure the column drawing back in a lowering temperature

AN INDIANAPOLIS WINNER.

Third prize White Rock pullet at Indianapolis, Ind., February, 1909. Bred and owned by J. H. Trobaugh, Delphi, Ind. See his ad in this issue.

even if used in a horizontal position. The end of the tube is then sealed and it is laid away to undergo the natural seasoning process.

After thoroughly seasoning the tube is tested out at various points in comparison with Standard Thermometers and several points made, from which the scale for that particular tube is graduated.

Then follows the interesting graduating and finishing of the scales, and finally locating the exact tube belonging to its particular scale, as each scale is graduated for one tube and no other can be used on it accurately.

This feature explains why you should never try to have an accurate thermometer repaired, as no other tube can be made to fit the graduated scale as accurately as the one from whose actual test points the scale was made.

After each of the processes here hastily summarized the "Tycos" are then each and every one compared at the temperatures at which they will be finally used in order to check any errors which might occur in the many hands through which they have passed.

The large investment of the Taylor Instrument Companies, making possible every scientific aid to accuracy, the experience of more than fifty years in making thermometers of all kinds, the pride in their reputation for high class work and accuracy are reasons which insure to the user of an incubator the best thermometer it is possible to possess—one bearing the name of "Tycos."

While our readers cannot all of them go through a thermometer plant they can obtain free a copy of an interesting and instructive booklet, "Thermometer Facts Worth Knowing," by writing the Taylor Instrument Companies, Rochester, N. Y.

75c Secures a copy of "Why Poultry Pays and How to Make It Pay." A 64-page book for the amateur and experienced fancier, and American Poultry Journal for one year.

L. E. SIMMONS :: CHICAGO, HURON COUNTY, OHIO

A BLESSING TO ALL HUMANITY.

How many of our readers are bathing with the same crude facilities as were used hundreds of years ago, thus missing that greatest boon to health and happiness—a thorough, modern bath? Let it be said to their credit that the bathroom is an unknown comfort in their homes only because such things required running water plus great expense. But it is no longer so. Just think—for a few dollars and with no water facilities other than a cistern or well everybody can now surround themselves with bathing advantages equal to bathrooms, bath houses and bathing resorts combined.

With wonderful ingenuity, a Toledo, Ohio, genius has embodied in one simple, inexpensive apparatus all the advantages known to modern bathing. It requires but one gallon of water, yet gives four distinct baths—cleansing, friction, massage and shower, either altogether or separately.

Our representative during a recent visit at the factory was astounded at the wonderful work of this invention, and everything considered, it is not surprising the factory is rushed with orders. He was shown hundreds of enthusiastic testimonials from prominent people, together with reports from agents who are evidently making big money supplying the enormous demand. Those of our readers who wish to make their spare time profitable or provide themselves with the most up-to-date bathing facilities should read the advertisement of the Allen Manufacturing Company on another page and answer it at once.

This is a rare opportunity which it behooves our readers to investigate, for it undoubtedly offers more genuine happiness for a little money than anything we know of.

THREE SITTINGS IN ONE MACHINE.

An unusual but entirely successful experiment was tried recently by Truman T. Parker, a poultry man, living near Kenosha, Wis., which consisted in having three different sittings in his incubator at one time.

Mr. Parker bought a 110-egg Queen Incubator and put in 45 eggs. One week afterward he put in 15 fresh eggs, and then, five days later, 15 more. His friends predicted nothing but failure. "Instead," writes Mr. Parker to the editor, "of the first 45, two were infertile and 42 hatched. In the second lot of 15 all hatched, and out of the third setting I got 13 chicks. One egg was infertile and one was accidentally broken." A severer test of a machine could hardly have been devised.

Frank Langford, Box B, R. R. 10, Nashville, Tenn., made the following record on his Rhode Island Reds this season: Boston, Mass., January 11-16, 3d pullet and 3d pen on two entries. The same week at Louisville, Ky., he won 1st cock, 1st hen, 1st and 2d cockerel, 1st and 3d pullet, 1st pen and silver cup. Madison Square Garden, 1908-9, 3d prize cock. At Tri-State Fair, Memphis, Tenn., 1st cock, 1st and 2d hen, 1st and 2d cockerel, 1st and 2d pullet, 1st pen, \$50 cup for best pen in the show and the \$25 cash for best display. Tennessee State Fair, Nashville, won 1st cock, 1st and 3d hen, 1st cockerel, 2d pen, besides many specials. On Rose Comb Reds he won all firsts and \$25 cash for best display.

He is offering eggs from his best matings. New catalog for the asking. Mention American Poultry Journal.

Ira C. Keller, Prospect, Ohio, breeder of Wyandottes and Sebright Bantams, reports the following winnings: On Golden Wyandottes at the late Cleveland show, 1st cock, 1st hen, 3d cockerel, 3d pullet, 1st pen. On Silver Wyandottes, 1st cock, 2d hen, 1st cockerel, 1st pullet, 2d pen. This in very strong competition. He has about 800 head of very fine birds to spare that he desires to close out at once and is making very close prices on them. For those that want something good in Wyandottes or Bantams he can make it interesting to them. Write for prices and mention American Poultry Journal.

Fifteen cents a rod buys a 22-inch hog fence. Other heights very low in price. See Kitselman Bros. ad in this paper and write them for free catalog.

Fence users will be pleased with Kitselman Bros. prices—15 cents a rod up. See ad in this paper and write them today for free catalog.

Planet Jr.

A practical farmer wanted bigger crops with less labor—and he invented the Planet Jr. It did better work and saved two-thirds his time. Now he makes Planet Jr. Seeders, Wheel-Hoes and Cultivators for two million farmers and gardeners. Planet Jrs. do the work of three to six men. Strong and substantially built. Made to last and fully guaranteed.

No. 8.

No. 25.

No. 25 Hill and Drill Seeder, Double-Wheel Hoe, Cultivator and Flow combines almost every useful hand-garden tool in one strong, light, easy-running, simply adjusted implement—opens the furrow, sows the seed in drills or hills 4 to 24 inches apart, covers, rolls down and marks out the next row. Does thorough work as a double or single wheel hoe, cultivator and plow.

No. 8 Planet Jr. Horse Hoe and Cultivator will do more things in more ways than any other horse hoe made. Plows to or from the row. A splendid furrower, coverer, biller and horse hoe. Unequalled as a cultivator. Write today for our 56-page free 1909 catalogue, which tells all about 6 kinds of Planet Jr. implements. S. L. Allen & Co., Box 1107T, Phila., Pa.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. **AMERICAN POULTRY JOURNAL** is furnished every classified advertiser for one year, where the advertiser remits \$1.00 or more. When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted. Or writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

MODEL FARM S. C. W. LEGHORNS.

Our laying houses are filled with splendid breeding stock. Half are fine yearlings, well over the full molt and laying. Half are beautiful, well developed laying pullets, raised on well-grassed free range.

Cockerels and cocks to match from special matings.

All bred from a heavy laying strain of prize winners. Have made the splendid record of ninety eggs each in six months, housed 300 in a flock a "large flock" average that has never been excelled.

Prices, \$1 and \$2 each. Special quotations on large numbers.

Incubator eggs, \$7 per 100; \$60 per 1,000. Model Poultry Company, 111 Terrace, Buffalo, N. Y. 2-4

FOSTER'S EGG MACHINE. The breed that pays is the breed that lays, and that breed is the Single Comb Black Orpingtons. So why waste your time and money with a small breed when there is a large one that excels the smaller ones for both laying and market purposes? Col. Foster has by careful selection produced a strain of chickens that has no equal in the show room or in the yard as breeders or layers. Send your name and address, plainly written, and Mr. Foster will send you free a beautiful chromo, together with the history of this wonderful new breed. D. N. Foster, R. F. D. No. 7, Fort Wayne, Ind. 3-3

Our New Poultry Book

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

Illustrated With 198 Colored Pictures of Chickens, Ducks, etc.

This is without doubt the finest and most complete work on poultry ever produced. It gives the origin and history of all the recognized varieties of poultry up to the present time. Also tells how to mate the different breeds for best results. Price of this book is \$1, but we offer you the following combination:

Origin and History of all Breeds, etc. } All For
American Poultry Journal one year } \$1.50
Farm-Poultry one year : : : }

This is the greatest value for the money ever offered to poultry readers. The book alone will give you information that you cannot obtain from any other source, and we have made the price so low that it is within the reach of every one. Send all orders to

AMERICAN POULTRY JOURNAL PUB. COMPANY

How to Build Poultry Houses

A 64-PAGE BOOK Devoted to the construction of poultry houses and fixtures, brood coops, etc. This book gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. This book should be in the hands of every poultryman. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks.

Price is only 50 cents Will send this valuable book and American Poultry Journal one year for 75 cents. Send all orders to

AMERICAN POULTRY JOURNAL PUB. CO., 113 So. Clinton St., Chicago

SUCCEED WITH

IT IS THE BEST IN THE WORLD

Fifteen years on trial and never found wanting. That's a guarantee that's worth something. Doesn't it give you a higher assurance of success than if you set about trying doubtful and unknown hatchers on so-called "free trial" offers? The one incubator that is popular everywhere is the

SUCCESSFUL INCUBATOR

More and more thousands of poultry raisers would not be buying it year after year if it did not live up to its reputation of being the world's greatest hatcher. **Get a Successful and be sure.** Don't buy until you have seen the Successful Catalog. It gives the facts. Booklet on "Proper Care and Feeding of Chicks, Ducks and Turkeys," 10c. Poultry paper 1 year, 10c. Catalog free.

DES MOINES INCUBATOR CO., 1 2nd St., Des Moines, Iowa

You
Can Trust
The Record

Fifteen
Years on
Trial

A SUCCESSFUL

We will give you A Record Book

It
will

show you how to
keep records that will
tell you how much you
are making from your poultry.

It has records that will show you how many eggs were laid today compared with last month or last year, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. You can find out what your costs are and what your profit really is. Men who are succeeding in other lines of business keep such records. Why should not you, when we start you free?

Ertel's Poultry Diary

It has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to feed—how to treat sickness. These pointers are worth getting the book for, since it costs you only a postal.

The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay freight.

It is well worth your while to have Ertel's Poultry Diary to watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out-of-date machine. Better write us today.

WHAT IS THIS?

Not a freak but
the first and only

PRACTICAL

Incubator
that

HATCHES

by allowing the
eggs to come into
actual

Contact
with a

Warm Body

The advantages of Hatching by Contact are numerous and fully described in our catalog which we will send you free. We want YOU

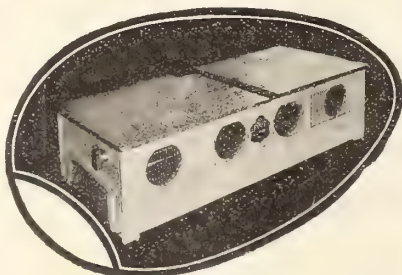

to know about this machine whether you are in need of an Incubator or not.

When the Root Contact Brooders were first put on the market, we had to do a lot of talking to get the poultrymen to try them because they were so different. That was years ago, and is not the case now, as hundreds are in use and most every mail brings in complimentary letters and more orders from our enthusiastic customers.

The ROOT Contact Warmth Brooder

The construction of this Brooder prevents the chicks from piling, and at the same time it gives the chicks what they seek by piling—WARMTH BY CONTACT. At all times even while warming themselves the chicks are breathing cool, fresh, vitalizing air.

Ask for the book on "ARTIFICIAL INCUBATION AND BROODING," by R. R. Root. It is free and worth asking for.

The Root Incubator Co., Desk No. 4 Cleveland, O.

R. I. REDS Single and Rose Combs

Our Winnings for the Season of 1908-9—At the Illinois State Fair, one of the largest Red shows ever held in the West, we won first Rose Comb cockerel and 3d S. C. cock. We only exhibited the 2 birds. At the great St. Louis Poultry Show in November, we won on Single Combs 2, 3, 4 cock, 2 pullet, 4 hen and 3 pen. On Rose Combs, 1, 3 pullet and 2 pen and color and shape special on females. At the Clinton County Poultry, Pigeon and Pet Stock Show held in January, we won on Single Combs 1, 2 cock, (showed no cockerel), 1, 3, 4 hen, 2 pullet, 2 pen. On Rose Combs, 1 cockerel, 1, 4 pullet, 1 pen and six out of the eight special club badges offered by the Rhode Island Red Club. Geo. Hartley & Sons, Trenton, Illinois.

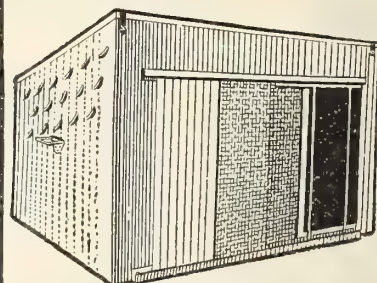

Sacrifice Sale

On account of other business I must sell all my SINGLE COMB WHITE LEGHORNS, including this season's Winners and Breeders, I intended to mate this spring. Go at half price. Score cards furnished. If in need of something fine, write

RAT-PROOF COOP

Protect Your Chicks From Rats, Mink, Weasel, Skunk, Lice and Mites The Sanitary Metal Brood Coop

is just the thing you've been looking for. It's a boon to poultrymen for it means safety, clean quarters and health to the brood. It's made entirely of galvanized iron, not a splinter of wood in it. You know you can keep it vermin-proof.

No Dampness, No Roup

Chicks and mother always perfectly dry. Exclusive pattern made and sold only by us. Adds 100 per cent to profits and keeps down cost and expense of poultry raising. Made in knock-down form.

Write for free booklet fully describing this coop; also our Metal Feed Coops, Combination Trap, Laying and Sitting Nests, Non-Freezing Drinking Fountain, Egg Carrier and Medicated Charcoal

DES MOINES INCUBATOR CO.

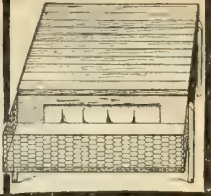

244 Third St., Des Moines, Iowa

125-EGG WISCONSIN INCUBATOR \$10 AND BROODER—BOTH FOR \$10

Why pay more than our price! If ordered together we send both machines for \$10.00, and pay the freight. Hot water, double walls, dead air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery underneath the egg-tray. Both Incubator and Brooder shipped complete, with thermometers, lamps, egg-testers—all ready to use when you receive them. All machines guaranteed. Incubators finished in natural wood showing exactly the high grade lumber we use—no paint to cover inferior material. If you will compare our machine with others offered at anywhere near our price, we will feel sure of your order. Don't buy until you do this—you'll save money. It pays to investigate the "Wisconsin" before you buy. Send for the free catalog today, or send in your order and save time.

American Poultry Journal Pub. Co. 113 South Clinton St., Chicago, Illinois

The Reliable Incubator

The Reliable is the only incubator on the market with a **Double Heating System** and **Inside Heater**—these features give it a double safeguard against sudden chills, and **double economy of fuel.**

The Reliable has the **best record for successful hatching** because it has the most perfect system of ventilation together with an **Automatic Regulator** which will not allow the temperature to vary **one-half a degree** during an entire hatch. It systematically supplies its own moisture, and is absolutely safe. Its handy Egg Tray and nursing advantages cannot be equalled.

The Reliable is made by the **biggest incubator manufacturers in the world**—the owners of the famous Reliable Poultry Farm.

They are practical men—men whose unequalled experience in the poultry raising business has taught them all the needs of the poultry raiser—men whose 27 years of experience in manufacturing business enable them to meet all these needs.

The Reliable Incubator is as far superior to other incubators as the Reliable Poultry Farm is to the farm of the amateur poultry raiser. Every Reliable Incubator is subjected to a thorough test on the Reliable Poultry Farm before it is sent to the purchaser—and is guaranteed to be **perfect** in every respect and exactly as represented, or money refunded.

648 FIRST PRIZES

Since 1896 the Reliable Incubator has won 648 First Prizes at World's International Expositions, State Fairs, County Fairs, Poultry Shows and Incubator Exhibitions. 575 of these prizes have been won since 1902.

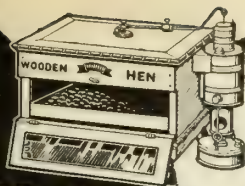

At the recent incubator trial conducted by the Government Poultry Expert at the New Zealand International Exposition, the **Reliable Incubator won the World's Record.** Eighty eggs were put in the machine and seventy-eight (97½%) were hatched. During this trial the temperature within the incubator never varied a degree from start to finish.

POULTRY BOOK FREE

We will send our **handsome new, illustrated Poultry Book** free on request. It clearly explains in detail every branch of the poultry business. It tells how to raise the healthiest fowls at the smallest expense—how to get fertile eggs—how to test them—how to market them. It fully explains the process of incubation and tells you how to **properly judge** an incubator.

This wonderful work is a money maker for the poultry man. Write today—right away, and book will be sent by return mail.

RELIABLE INCUBATOR & BROODER CO. Owners of the Famous Reliable Poultry Farm **Box C1 QUINCY, ILL.**

Stahl Incubators were among the first to be put on the market; to-day they stand as they did then—the best—approved by thousands of particular fanciers the world over.

This isn't luck—it's merit—perfect incubator value, produced by the right kind of material and workmanship, backed up by an unbroken line of splendid results. The

Hatch Chickens By Steam

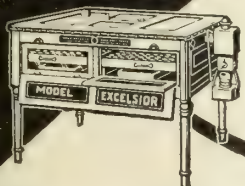

Excelsior and Wooden Hen INCUBATORS

have a standard hatching record of a chick from every fertile egg; they maintain this splendid showing because all features of their construction—heat, moisture, ventilation, and similar details—are carefully looked after and perfectly worked out.

The **Excelsior** or **Wooden Hen** will hatch a brood before your hens stop laying. You can market your early broilers and mature pullets into quick layers at a time when both will yield an extra big profit.

Buy a "Stahl" and eliminate trouble and worry. Catalogue illustrates complete line of Incubators, Brooders, Poultry Supplies, etc. Free on request.

"Ringlet" First Prize Exhibition Pen at Madison Square Garden, New York.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winter of 1907-1908 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the P. sident for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Pichly illustrated 50-page catalogue upon request; it is full of original pictures of New York winners from life. Canada's Best R. C. and S. C. Black Minorcas

Winners of the Red and Blue at the largest shows on the continent. At the Ontario at Guelph, Canada's greatest show, December, 1908, we won on S. C. cock, 1st and 3d; cockerel, 1st, 2d and 4th; pullet, 1st and 4th, and on R. C. cock, 1st; hen, 1st and 2d; cockerel, 1st, 2d and 3d; pullet, 1st, 2d and 3d, and all specials. At the great Boston show, January, 1909, we won on S. C. cock, 1st, 2d and 3d; hen, 1st and 2d; cockerel, 1st, 2d and 4th; pullet, 1st, 2d, 3d and 4th, and on R. C. cock, 1st and 2d; hen, 1st and 2d; cockerel, 1st and 4th, and pullet, 1st. These wins are not ancient history and every bird but one was bred by us. Send for mating list.

T. A. FAULDS

: : London, Ontario, Canada

BUFF LEGHORNS

Single Comb :: Winning Quality

New York, Trenton, N. J., and Easton, Pa., winners. Eggs from prize matings \$2.00 per 15, \$10.00 per 100. Grand utility matings \$1.00 per 15, \$5.00 per 100. Fine male birds \$3.00. Good hatches positively guaranteed. Send for booklet. Eggs from my Columbian Wyandottes at \$2.00 per 15 straight.

Jas. Kugler Jr., Maple Hill Farm, Rite 1, Frenchtown, N. J.

Trethaway's Anthracite Black Minorcas

Still hold their record by winning at the largest shows in America 1908-'9. Four cho ce pens mated, the cream of 18 yrs.' breeding and will produce winners for 1909-10. Limited number of eggs sold this year, \$5 per 13, \$9 per 25. Send for mating list.

ARTHUR TRETHAWAY, 45 Parish St, Wilkesbarre, Pa.

RINGLETS

My BARRED PLY. RO KS won highest honors at Columbus, 1908, again at big Cleveland show, 1909. Have the narrow barred kind so hard to get. Both matings. Fifteen eggs, \$3. Mention this paper.

L. E. Simmons, Chicago, Huron Co., O.

OWNED BY
KELLERSTRASS FARM, KANSAS CITY, MO.

CRYSTAL KING JR.

The above is a true type of a Kellerstrass "Crystal"
White Orpington.

CRYSTAL WHITE ORPINGTONS

Are the Biggest Payers Because They Have Proven
to be the Biggest Winter Layers in Every Egg Laying
Contest That CRYSTALS Have Been Entered in

CRYSTAL White Orpingtons are the grandest utility birds on record today, and as to their fancy quality they won first at Madison Square Garden, New York, 1905, 1906, 1907; also at Crystal Palace, London, England, Chicago, and Boston. If you need some birds to improve your stock or for the show room, write us, we have them, and the kind that win, as our past record shows. Stock and eggs for sale at all times. Remember, we are the originators of Crystal White Orpingtons, and breed only the one kind. We devote our whole time to this one breed. Send for catalog; mention A. P. J.

Kellerstrass Farm, R. F. D. No. 1, Box 98, Kansas City, Mo.

DeGraff's Vitality Reds to the Front

Try my strong germ, Pneumatic protected Red Eggs that hatch vigorous, never-die, hardy Red chicks

MATING LIST FREE

SINGLE COMB REDS

I am satisfied, I can truthfully say that I saw more good Rhode Island Reds in one bunch than I ever saw in my life, and the fact of such a large number of birds to see them all so uniform in color and so healthy makes me say that my visit to your plant was the most interesting that I ever enjoyed in my life in this business. Certainly too much can not be said of the number of your birds you have, and the quality of them, and what is more the health which every bird appeared to be in. You are certainly deserving of all that is coming to you. Yours very truly—F. W. DeLancey, Editor Poultry Item.

ROSE COMB REDS

I visited the DeGraff Poultry Farm, where I inspected many hundred fine Reds which were a surprise to me for the high average quality of both breeds. I found his 1909 breeding pens comprised an extra fine lot of yearling hens, and large fully developed pullets, and as mated they would be hard to duplicate for good results in breeding. I saw at least twenty-five Red males that would average better than any string of males I have ever seen in any show room and should make the best of breeders, as they are the same even shade of rich red all over that we are looking for.—A. C. Chapin, Springfield, Mass.

...Prize Record Unequaled...

Read editorials about it. Three colored pictures by three different processes of art printing. Embossed Red Cock Trio, R. C. Red by direct photography process. Only one ever taken of fowls on earth. Highest grade printing possible to produce and a work of art you can't afford to be without, 25 cents.

Most Wonderful Offer Ever Published!

Save 30% to 50% on Your Purchases!

Chicago House Wrecking Co.'s 1909 Sale of Merchandise!

From Sheriffs', Receivers' and Manufacturers' Sales!

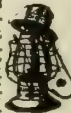

Lumber and Building Material!

100,000,000 feet of Lumber for sale. THINK OF IT. The Chicago House Wrecking Co. offers you an opportunity to buy Lumber and Building Material today at prices at least 50 per cent below what you could purchase it for a year ago. We can do it because we buy in such enormous quantities direct from the saw mill that we are able to control their output; we are also continually buying at Forced Sales. The Lumber we're offering consists of the very highest grades manufactured. Nothing "WRECKED" about it but the prices. It is clean stock and as good or better than your local dealer sells. We have Lumber of every kind. Lumber for your house or your barn, your church, meeting house or building of any kind.

Never again will Lumber be offered at the low price we are selling it for today. This is not an idle statement. It is made after the most careful thought. Every year the supply is diminishing and the manufacturers must get more money for it, but we say to you that if you are ready to buy now, you can save from 30 to 60 per cent.

Hardware Bargains!

Steel Shovels 30c, Steel Hammers 25c, Handled Axes 50c, Steel Hatchets 30c, Electric Door Bells 60c, Hot Lunch Dinner Pails 20c, Meat Cutters 75c. These are but samples of our ability. We have everything complete in the hardware line, Door Locks and Knobs, Builders' Hardware in general—a new clean stock of hardware at wrecking prices.

STEEL ROOFING, \$1.60 PER SQUARE

That's our price on our new high grade, semi-hardened steel roofing. \$1.60 is our price for first; \$1.85 for corrugated or V crimped. This roofing is light weight. It comes in sheets 22 in. wide by 6 or 8 ft. in length. It is strictly brand new, first-class. At this price we prepay freight in full to all points east of Colorado except Oklahoma or Texas. Prices to these and other points on application. This freight prepaid proposition applies only to this roofing advertisement and has nothing to do with any other offer. Write today.

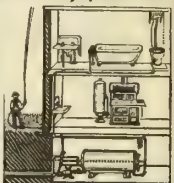

Furniture & Household Goods!

Our wonderful Furniture Catalog containing hundreds of pages of genuine bargains with beautiful illustrations in natural color effects is sent free on application. 10,000 bargains representing high-grade, brand new Furniture, Carpets, Rugs, Linoleum, Stoves, Office Furniture and General Supplies. Bargains from Forced Sales of every kind, and nothing of the shoddy nature about the goods, either. Not the kind you would buy from the regular run of merchandise houses, but the sort of good furniture that is built "for keeps." Manufactured for city trade and now offered to you at as low a price as you can buy it if you were right in Chicago at our warehouse. This is a chance you must duly appreciate. We can supply your home complete, and we will do it at money-saving prices in every instance.

You can buy everything you need to furnish your home. Every article is covered by a guarantee so broad that you cannot go wrong. Favor us with your order. Write for our wonderful Bargain Catalog and let's convince you our prices are right. Write us today.

WATER SUPPLY OUTFITS, \$48.00

You can live in city comfort even though your home be on a farm. From \$48.00 upwards, you can buy a complete outfit needed to give you these comforts. With our comprehensive instruction book you can install the outfit yourself. Let's tell you more about it. Our interesting book on water works systems is free for the asking. Remember it gives ample fire protection and reduces your rate of insurance.

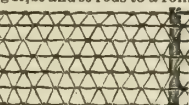

Gasoline Engines, 2 H.P. \$49.75

A strictly high-grade, brand new, fully guaranteed engine, complete in every respect. Price includes electric igniter, battery lubricator, and in fact a complete outfit ready for use. Here is an engine simple to operate, which we sell on 30 days free trial, so you take no chances. We give a five-year binding guarantee against defective workmanship or material. 4 H.P. \$96.75; 7 H.P. \$177.50; 10 H.P. \$265.00.

20-Inch High Galvanized Fencing, Per Rod 15c

20,000 rods of new square mesh and diamond mesh fencing for sale. It is put up in rolls containing 10, 20 and 30 rods to a roll. It's new, clean stock, bought by us at manufacturer's sale and now offered at 30 per cent less than regular prices. Better buy now while our stock lasts. We have but a limited supply for sale and orders are rolling in.

Iron Pipe, 3c Per Foot

Wrought Iron Pipe with couplings. Thoroughly overhauled and practical for further service in random lengths. Prices per foot: 1/2 in. 2c, 3/4 in. 2 1/2c, 1 in. 3 1/2c, 1 1/4 in. 4 1/2c, 1 1/2 in. 5 1/2c, 2 in. 7 1/2c, 2 1/2 in. 11 1/2c, 3 in. 15c, 4 in. 21c. Larger sizes in proportion. Our high grade lap welded light weight iron pipe, with new threads and couplings is the best used pipe material ever offered. Satisfaction guaranteed.

Rubberized Galvo Roofing, \$1.25 per sq. yd.

The best ready roofing on the market. Its base is pure mineral wool and genuine asphalt. No tar, residuum or other injurious matters used in the construction of this roofing. It is positively guaranteed to give lasting service. We have it in three grades, 1-ply at \$1.25 per square; 2-ply at \$1.40 per square and 3-ply at \$1.75 per square. By a square we mean 108 sq. ft. or sufficient to lay a square. Our price includes nails, caps and cement to make the laps. At this price we prepay the freight in full to your railroad shipping point at all points east of Colorado except Oklahoma or Texas. Prices to those points on request.

Barbed Wire, \$1.80 for 80 Rod Reel

10,000 reels of this wire for sale. It's the best galvanized material on the market. It is made of No. 14 wire with the barbs 3 in. apart. It has all the strength of the regular grades of barbed wire, but is lighter in weight and costs less for transportation. Each reel contains exactly 80 rods, so that you know just how much to buy. It is not sold by the weight. It is made of high-grade tempered steel wire, with the proper tensile strength, and built for barbed wire purposes. You can't go wrong if you buy it. Each reel weighs about 55 lbs. Price for 80-rod reel, \$1.80.

DOORS 40c; WINDOWS 29 CENTS

Bargains of all kinds. Our special catalog shows a marvelous aggregation of bargains. You can't be right until you have a copy of it. Here are some quotations from our new price maker. Barn Sash 86c; Storm Sash 70c; Stall Sash 21c; Hot Bed Sash \$1.55; Windows 50c; Panel Doors 80c; Glass Doors \$1.75; Window Frames \$1.25; Door Frames 50c; Base Angles 2c; Corner Blocks 2c; Base Blocks 85c; Inside Trim 60c; Plate Rails 6c; Stair Newels \$1.85; Stair Rails 7c; Porch Balusters 5c; Porch Rail 8c.

PAINTS, 30c GAL.

This is our high grade Premier ready-mixed paints put up in strong substantial cans and packages. No better mixed paint on the market at this price. We can furnish it in all colors. Covered by a binding guarantee. Barn paints 80c per gal. Cold water paints 8c a lb.

GALVANIZED FENCE WIRE, \$1.50 PER 100 LBS.

At this price we supply our new galvanized wire shorts. They are put up 100 pounds to the bundle. By shorts we mean wire that comes in lengths, ranging anywhere from 50 to 200 ft. It is good for all general purposes. We can supply it in all gauges. Our price on gauges 12 and 14 \$1.50 per 100 lbs. BB telephone wire 60 lb. coils, No. 12, \$2.25 per hundred lbs.; No. 14, \$3.10 per 100 lbs. Order today.

KITCHEN SINKS, \$1.40

That's the price of an 18x80 white enameled, cast iron, flat rim kitchen sink. We have blue steel enameled kitchen sinks in one piece, seamless, size 18 x30 at 75c. Kitchen sinks with backs from \$4.00 up. White enameled Wash Stands or Lavatories at \$4.00 up. A Lowdown Water Closet outfit with a white enameled tank, latest and best closet tank manufactured. Complete with hardwood seat and necessary nickel-plated fittings, vitreous wash-down closet bowl, \$11.00.

Hogtroughs, \$1.50

Extra strong, made of heavy 3/4 in. boiler steel. Best shaped tank manufactured; absolutely indestructible, clean and sanitary. All metal, well riveted, stands strong and firm on the ground. Satisfaction guaranteed. Regular price \$2.50 to \$5.00. Our prices \$1.50 to \$2.75.

The **Reliance** has the safest hot water heating system known. Has always been made **absolutely safe**. Of the 200,000 sold, we have never heard of one exploding, burning up or doing any damage whatever. Self-regulating, self-ventilating and requires very little oil.

Are Your Chicks All Strong and Healthy?

WHEN chicks do not grow stronger day after day, it is a sure sign that there is something wrong with their feed. It may be that they are eating ravenously, but are unable to digest their feed and are consequently getting no benefit from it. Just at this season the chicks are in their most critical condition. Their stomachs are weak and unless they are properly fed, they soon become sickly, and are an easy prey to one or more of the common chick ailments, such as roup, gapes, chronic indigestion, bowel trouble, etc. Just a little care in selecting the right feed in the beginning, will save you considerable loss.

Darling's Chick Feed

Darling's Chick Feed is perfectly digestible and all nutrition. It is free from weed seeds, mill sweepings and trash—there is no waste.

Chicks get the full benefit of this pure feed and start to make strong, vigorous growth from the beginning. Darling's Chick Feed is only one of this old reliable line of poultry food.

Darling's Scratching Food, Forcing Food, Mica Crystal Grit, Beef Scraps, Laying Food and Oyster Shells—each carefully made for a definite use. Order from the nearest office and save freight. Complete catalog of poultry supplies, Free.

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 19th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 19th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 39th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

This is the greatest Combination **Ever Offered by a Poultry Paper**

and especially so when you take into consideration the fact that American Poultry Journal will, during the coming season, publish five more of those handsome 'colored plates of poultry, any one of which is worth the price of a year's subscription to any one interested in thoroughbred fowls.

This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Quarter-Centennial or "Jubilee Year."
Write for Jubilee Catalog—FREE

The oldest Woven Wire Fence on the market is now celebrating its "Jubilee Year." A handsome "Jubilee Edition" Fence Book has been issued for widespread distribution. Gives the wonderful history of Page Fence—tells how it is made of genuine High-Carbon, Basic Open-Hearth Steel, in Page Mills and Factories. Explains the remarkable elasticity and resiliency of the wires. Shows how Page Fence is woven on Page Looms into the most enduring wire fence the world has ever known. Fully illustrated. Handsomely printed and bound. A book every reader of this paper should own. Don't buy fence at any price until you read the "Jubilee Edition" Page Catalog. Send now!

PAGE WOVEN WIRE FENCE CO., Box 583 Adrian, Mich.

**SAFE****BROWN HEAVY WEIGHT POULTRY FENCE**

Does Not cost one-half as much as the Common Chicken Netting, yet will last five times as long.

Size of Wires. The top and bottom wires are No. 9 gauge—same size as nearly all stock fences. Intermediate and stay wires in same proportion.

Quality of Wire. All material used in Brown Poultry Fence is best grade of High Carbon, Double Strength Spring Steel Wire. The galvanizing is the heaviest and best possible. All wire is subjected to careful inspection and acid tests before being made into fence.

Construction. Very closely woven, and a sure protection against marauding animals. Your poultry is safe from everything when enclosed with Brown Fence. Built of material heavy and strong enough for horses and cattle. Wires cannot possibly slip.

Saving in Cost. With a No. 9 top and bottom wire you can save at least one-half the posts, and besides you require no top railing or bottom boards. These items alone usually cost more than the fence.

Price. Our prices are less than common netting costs. WE PAY THE FREIGHT and guarantee safe delivery to your nearest railway station.

Guarantee. We guarantee every rod of our Poultry Fence. Every customer who buys this fence and does not find it entirely satisfactory and fully up to his expectations is at liberty to return the same at our expense.

Before buying Poultry Fence get our catalog and investigate the many superior qualities of our fencing. We have 150 styles of fencing—a fence for every purpose. Write today.

"Tycos" Thermometers

Tell the Truth About the Temperature in the Incubator and Insure Chick Life.

A Lying Thermometer Will Kill Chicks

A thermometer which tells you that a temperature of 106 or 107 degrees in the egg chamber is only 103 degrees, lies to you.

That lie will kill the chick in every egg in the incubator.

The Thermometer in incubation is more nearly parallel to the Thermometer in medical practice than any other use to which a Thermometer is applied.

Ask your doctor what the effect would be in his practice if his Thermometer lied two or three degrees.

A human temperature of 107 degrees is the danger point, and calls for heroic measures.

Suppose his Thermometer indicated 103 or 104 degrees when the actual temperature was 107 degrees. The result would be identical with operating an incubator at 106 or 107 degrees if your Thermometer lied and indicated 103 degrees,—sure death in the case of the chick, and probably with the patient.

Physicians are careful to know that their Thermometers tell the truth. You should be equally careful to know that your Incubator Thermometer tells the truth.

"Tycos" Incubator Thermometers are made with the same relative care and skill as "Tycos" Clinical Thermometers.

When a "Tycos" Thermometer shows 103 degrees you know it is 103 degrees—"Tycos" Thermometers do not lie.

Let us send our little booklet entitled, "Thermometer Facts Worth Knowing."

It will tell you many things about Thermometers you did not know. The information it contains will enable you to guard against temperature difficulties, and possibly insure a successful hatch.

If you are planning to buy an incubator, tell the manufacturer you want "Tycos" Thermometer with your machine.

The manufacturer of any good incubator ought to be glad to have you ask for a "Tycos" because he knows it is a Thermometer that will give you the greatest success with his machine.

Ask for a "Tycos"—insist upon having it.

Taylor Instrument Companies Rochester, N. Y.

No! They're NOT all Alike

Don't let your dealer tell you that **all** insect destroyers are alike, for they're not. Some kill lice; others kill mites. Some are effective in one locality, but worthless in another, and *vice versa*. But

Lee's Lice Killer

is effective any time or place. It kills them all—lice, mites, jiggers, bedbugs—vermin of every description, whether on the fowl or in the poultry-house.

No dusting, handling, dipping or greasing, if you use **LEE'S**. Just paint or spray the roosts and walls. That's all! No individual treatment of fowls. Never buy the "just as good" kind there isn't any. Get the best—**LEE'S**. Yellow cans and labels. If your dealer can't supply you we will send you a gallon, express prepaid, for \$1.25, and one of our Egg Records, free.

Quart	•	\$0.35
Half-gallon	•	.60
Gallon	•	1.00

We have, on the Mandy Lee farm, more than a thousand of the hardiest, handsomest, whitest, best-laying S. C. W. Leghorns to be seen anywhere, much of it high-scoring exhibition stock.

Some of our breeding pens do not contain a bird scoring less than 96 pts. We haven't a surplus cockerel.

One of our 96½ pt. Pullets
A first-prize winner

but have a few hens and pullets that can be bought at reasonable prices, and can furnish eggs at from \$1 to \$5 per sitting of 15.

Write for our mating circular.

Illustration above will give some idea of what may reasonably be expected of eggs from **any** of our pens.

Address, GEO. H. LEE Co. 1134 Harney St., Omaha, Neb.

Save the Chicks

Are you one of the many who can hatch chicks, but cannot raise them? More chicks die from Bowel Complaint and Cholera than from all other diseases combined, and yet these diseases can be prevented and cured by proper use of

GERMOZONE

the biggest seller in poultry medicine ever placed on the market.

Germozone is a tonic; a bowel regulator; the best cure for **Bowel Complaint, Roup, Cholera**, and other poultry diseases. Most of these troubles originate from colds or some internal disorder, which, if taken in time can be quickly cured, but if neglected will frequently result in loss of the entire flock.

Germozone goes to the seat of the trouble and, unless the disease is in its last stages, usually effects a speedy cure and with absolutely no injurious after effects. Germozone is not the product of a minute but the result of years of

labor in preparing a medicine for a specific purpose. Its great reputation—its general use among poultry-raisers the world over—proves its value. **BUY IT ON OUR GUARANTY.** (Either tablet or liquid.)

Price, 50 cents.

USE FIRELESS BROODERS

The ones that raise more, better and stronger chicks; no dirty, smoky lamps; no danger from fires; the kind that is replacing the old-style brooders on the best poultry farms everywhere.

Lee Fireless brooders are a success either indoors or outdoors,—winter or summer, in any situation warmer than 20 above zero. They are storm-proof and vermin-proof, and with the same perforated-tube system of ventilation as used in our Incubators.

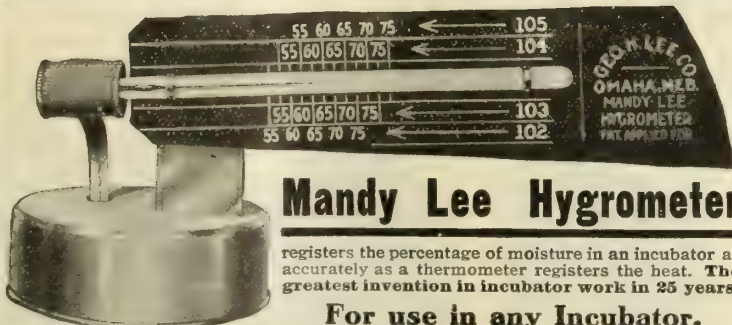

Lee Fireless Brooder is built along correct lines. It has a heavily padded adjustable hover; large air-space in top as protection from sun or wintry blasts; double doors; properly arranged ventilation; metal-covered top and rain-shield. In fact, it has been built to produce the same results as the heated brooder, but utilizing the **natural animal heat** of a bunch of chicks instead of dissipating the animal heat and adding artificial heat as in other brooders.

A good brooder is necessary if you remain permanently in the poultry business. If not satisfied with your present equipment, don't waste time and patience with further "trials" and experiments—buy the Mandy Lee "Fireless."

Two sizes—100 chick; 200 chick. We guarantee satisfaction, immediate shipment, and safe delivery.

Top removed, showing hover

Mandy Lee Hygrometer

registers the percentage of moisture in an incubator as accurately as a thermometer registers the heat. The greatest invention in incubator work in 25 years.

For use in any Incubator.

Don't Guess at Moisture

"Dead in the shell," "stuck to the shell," etc., are the direct result of **Guessing** at moisture, and it don't pay. Too much moisture is just as injurious as too little.

What is needed at hatching time is a strong chick and a weak shell, possible only when proper conditions of heat and moisture have been maintained at the eggs during each of the 21 days of incubation.

If your hatches are not what they should be our Hygrometer will improve them for you. **Stop guessing.** Reduce your incubator work to a scientific certainty. **Like conditions invariably produce similar results.** Proper hatching conditions at the eggs mean success—not occasionally, but every time.

The Mandy Lee Hygrometer is adapted for use in any incubator, occupies the space required for only one egg, and will be sent anywhere, all charges prepaid, on receipt of price. **PRICE, \$2.50.**

ORDER NOW and ask for booklet "Incubator and Hygrometry" and Incubator Catalog. ●

This Answers Your Question WHICH INCUBATOR or BROODER SHALL I BUY?

Every manufacturer claims that his incubators and brooders are the best. We make a similar claim, but with this difference—First, we devote over 50 pages of our big catalogue to illustrating every separate part of our machines, and clearly describe how they are constructed, so that every intelligent person may judge of the superior work and material put into them, and may see for himself **Why They Are the Best. Then, and Not Till Then, We Tell How They Have Hatched** for Our Customers during the twelve years they have been on the market.

Now it occurs to us to let the **LEADING FANCIERS OF THE COUNTRY TELL YOU THEIR TALE**—give **their** experience with our incubators during all these years. So we have turned to our big catalogue and cut out a few of their photographs; and here they are (all we have room for), with two or three lines taken from each of their letters. You can read the letters in full if you send for our big 212-page Free Catalogue—and they are worth reading. They are **Tales of Success**. These photographs represent breeders **So Well Known Throughout the World as Leaders**—as **Successful Poultry Raisers**, that it is unnecessary for us to say more.

Would you also become famous? Then you must do as they do—use the best equipment in your business; be down to date; lose no hatches; lose no time; lose no money; take no chances, but order at once, to insure immediate shipment, one of these superior machines.

Cyphers Standard Incubator
Fire-Proofed, Insurable, Self-Ventilating
and Self-Regulating

CYPHERS FIRE-PROOFED INSURABLE INCUBATORS Are The WORLD'S BEST HATCHERS

Now that you know the leading, the most successful, the money-making breeders all choose the Cyphers machine in which to hatch their winners, it will be clear to you why we state at the top of this page—"This Answers Your Question—Which Incubator or Brooder Shall I Buy?" In other words—We, as manufacturers, show you that **Cyphers Incubators are the best constructed machines** on the market, and then **these experienced breeders tell you they are the best hatchers**. We know it, but we want you also to know it. Do you require still more evidence of this truth? If so, let us turn once more to our big, free, illustrated catalogue. Therein we find letters giving proof that

Cyphers Incubators Are Used
By More Government Experiment Stations
By More Large Practical Poultry Plants
By More Leading Fanciers and Exhibitors
By More Large Successful Duck Farms
Than All Other Makes Combined

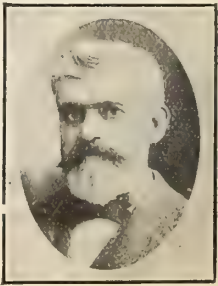

"I won many first prizes on birds hatched in your machines."
W. W. KULP, Pottstown, Pa.

"Two 100% hatches; one 97 1/2%, one 95%. All my winners hatched in your incubator."
G. W. MITCHELL, Bristol, Ct.

"Cyphers beats them all and hatches larger and plumper chicks."
O. E. SKINNER, Col'bus, Ks.

"Used them past ten years. Tried different makes. Shall use only Cyphers."
M. S. GARDNER, Auburn, N. Y.

"Used them since 1888. Never had a poor hatch. Repeatedly had 92 and 92 1/2%."
F. C. SHEPHERD, Toledo, O.

C. H. WYCKOFF, Aurora, N. Y.—"During 7 years have used your incubators only. Am not looking for better."

D. W. YOUNG, Ridgewood, N. J.—"Contributes largely to my winnings at New York and Boston."

W. H. BUSHELL, David City, Neb.—"Best hatches, strongest chicks I ever had. Great big fluffy fellows."

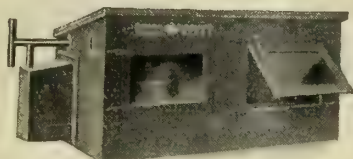

AUG. D. ARNOLD, Dillsburg, Pa.—"Tried other makes. Cyphers leads all. Obtain marvelous results."

O. P. BENNETT, Washington, Ill.—"Used seven years. Superior to any other. Tried six different kinds."

Having Hatched Your Chicks Right Don't Let Them Die By Poor Brooding

Cyphers Style C, 1909, Outdoor Brooder

Fire-Proofed, Insurable, Self-Ventilating
and Self-Regulating

who must also be experienced poultrymen. Such a combination of requisites is exemplified in the production of

CYPHERS FIRE-PROOFED INSURABLE BROODERS

Cyphers 1909 Brooders and Cyphers 1909 Incubators are so constructed as to comply with the new requirements of the National Board of Fire Underwriters, and both our Incubators and Brooders bear the Insurance Label in proof of their insurability. We were the first in the world to secure the insurance label, and in consequence our machines have been recognized as insurable by Insurance Bureaus and Inspection offices throughout the United States and Canada. Before buying an incubator or brooder you should satisfy yourself (for your own sake) that it bears the insurance label. Full explanation of the facts which govern insurable incubators and brooders will be found in our big, free catalogue. Send for it today. See its contents mentioned below.

If You Want a Low-priced Brooding Equipment

You cannot do better than get one of our Fire-Proofed, Insurable, Adaptable Hovers. It Mothers the Chicks Better Than a Hen. It consists of heater, hover, lamp, thermometer, and everything necessary except the box. You can box it in yourself, or use the hover without a box by putting it in a poultry house, barn or chicken coop. Even a piano box will do. Don't you want to read about this low-priced, serviceable brooding hover? It is fully illustrated and described in our catalogue.

WHITE ROCKS : OWEN

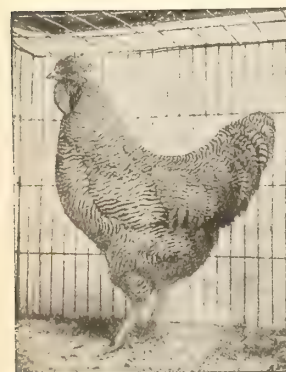

1st N. Y., 1904 and 1906. Old Champion.

1st New York, 1907.

1st New York, 1907.

1st N. Y., 1904. Ben Hur III.

What We Have to Sell Now

WHITE ROCKS

This is the time for you to strengthen your breeding pens, and undoubtedly an opportune time for you to do it. We have now some grand good cock birds and hens in White Rocks that we are not using in our breeding pens, which we can sell to you at right prices, and which have quality that will please you and do you good service.

If there ever was a time when we could say properly **DO IT NOW** it is in regard to these birds, which we **WANT** to sell, and you **WANT** to breed. Our blood means Type and Color, and great increase of your chances in the Fall Shows.

COCKERELS and **PULLETS** we have in plenty, and can fill your requirements at right prices. Time is a great object now. You may safely send us the sum of money which you wish to pay for what you want. We will send **THE BEST WE CAN** for it, and it will be subject to your satisfaction. If it is not, we will return you your money the day the birds arrive back. Tell us just what kind of White Plymouth Rock you want. If we do not **KNOW** that we have it, we will not send a bird, but will return your money.

WHITE ROCK EGGS FOR HATCHING

Send for our 1909 Mating List. We do not state the price here, because we do not sell "Just Eggs." We sell **THE** eggs from certain well described males and females, and the prices vary according to the quality of the birds. Our Mating List gives the prices in full.

WHITE WYANDOTTES

Of Cock birds and Hens we have only a very few to offer; but these few are choice, and you ought to inquire about them at once if you are wanting them, as the prices will be right for the birds.

COCKERELS, however, we have in plenty, white as snow, grand in type, good heads, and as sure to breed winners as it is sure that they are this moment fit to win anywhere. **VIGOROUS?** Well, that is one reason why we **WISH** to sell them. Each one imagines that he is the Champion heavy weight of America. Seriously, too much cannot be said for these Cockerels. Do not hesitate to send \$10, \$15 or \$25 for the best bird we can send for the money. We will take **ALL** the chances. You need take none. We will guarantee to satisfy you.

AND PULLETS—A few only we can spare; but they are choice—perfect ideals of what a Wyandotte female should be. This will tell you something: Not a single Pullet at less than \$7.50.

ENTHUSIASTIC? Yes we are, and so is everyone to whom we have sent our White Wyandottes this year.

WHITE WYANDOTTE EGGS FOR HATCHING

Send for our 1909 **MATING LIST**.

BUFF ORPINGTONS

Here we have everything that you want: Cocks, Hens, Cockerels and Pullets, and plenty of them, and of all degrees of quality and price. If you want breeding helpers, we will be **PROMPT** and answer your correspondence at once, and make shipments without delay, so that you can get the full value of your purchase.

Buffs require a lot of breeding to get good type, good color, strong under color, and to be free from disqualifications. It has taken years to attain our present perfection. We can surely save you years of time, trouble and expense in getting results in this variety. If we were talking to you, we should repeat and say, "Really we can."

Get this year some Owen Farm's blood in your Buffs. We were asked last Fall to go two hundred miles to inspect a flock of eighty Buff Orpingtons. We picked out seventeen birds for the next year's breeding. The owner said, "How did you do it? All of those you have picked out are pure Owen Farm's blood. The others are another strain. How did you know?" We said, "A small portion of the head was enough. Do you notice the beak? It is of far better shape, and white and of good color. The other birds all have slightly crooked bills, which are almost red in color." Let us start you or help you if you have started wrong.

BUFF ORPINGTON EGGS FOR HATCHING

See our 1909 **MATING LIST** for the twenty-four best mated Buff Orpington Pens in this country. Prices according to quality.

BARRED ROCKS

The grand Gardner & Dunning flock added to our own birds put us in a position to supply you with anything you may need in Barred Rocks. As an all round flock there is no better in the World.

There are two things that place our flock on a plane of its own. These two things you need in your own flock. They are, first, perfect health and vigor, and, second, perfect shape and size. These two things are absolutely necessary in all flocks, and absolutely lacking in most of them.

We have narrow clean barring to the skin on all our birds of both cockerel and pullet lines. We can help the shape in any flock, and the color in all but one or two.

We have several grand cocks from both lines that are fit to head your best pens. In hens we can spare forty grand good selected birds that will throw winning chicks, as we can mate them. Two hundred of the finest cockerels and pullets ever sold are yours, if you want them.

All have fiery red eyes, excellent combs, narrow snappy barring, all the vigor in the World, and the type that has made this strain pre-eminent wherever shown.

Wm. Barry Owen, Prop.
Maurice F. Delano, Mgr.

: Always Address Owen Farms, Vineyard Haven, Mass.

FARMS: BAR'D ROCKS

About Barred Plymouth Rocks

Owen Farm has been quietly breeding Barred Rocks for five years, and we have been improving steadily all the time. When our Mr. Delano joined us he brought with him both a wonderful experience in breeding this sterling variety, and some grand breeding birds. At the World's Fair in St. Louis, in hot competition, he had won the 2nd Collection. During all of these years, however, we would not show our birds, because until we could be a leader or among the leaders in this variety we did not wish to make a move.

Year after year we lived in "Barred Rock Alley" at the Madison Square Show, studying and watching the progress made: Who had the BEST FLOCK? Who was showing and breeding the best males and females? Who had the best SHAPE? Who clearly indicated by their breeding and birds shown, in combination with this grand shape, even barring, narrow with perfectly tipped feathers, and with color that was bright and snappy, that they were entitled to the FIRST HONORS?

Our answer was, "Gardner & Dunning, of Auburn, New York." The last three years that they have exhibited they have won the *SHAPE SPECIAL* each time. In the last ten years there have been at Madison Square fifty Firsts (five each year) and fifty Seconds. Gardner & Dunning have won of these Firsts and Seconds TWENTY-THREE. Think of it! Twenty-three per cent of all Firsts and Seconds—honor enough, was it not?

On February 6th, 1909, Owen Farms purchased this whole business of Gardner & Dunning—their entire flock of six hundred birds, which we firmly believe to be the best flock of Barred Plymouth Rocks in this country. We also purchased their good will and business.

We cordially ask all of their friends and patrons to give us their orders and support.

To all fanciers of Barred Plymouth Rocks we respectfully announce that we have prepared a special Mating List of Barred Rocks, which is "yours for the asking." In it you will find set out what our flock really represents.

We can furnish you with old and young stock or eggs, and in the same reliable manner employed by us in dealing with our customers in our other varieties. We solicit your inquiries.

Lastly, we wish to tell you that when we took over this grand flock and business, Mr. Newton Cosh, than whom there is no more able breeder and judge of Barred Rocks in this country or Canada, joined Owen Farms as Assistant Manager, and will especially devote himself to this magnificent flock, which, during the last year, he has mated and cared for, and for the grand success of which at Madison Square Garden he has been responsible.

We invite you again to inquire all about our Barred Rocks.

This Year

Note the marvelous winnings this year: New York State Fair, Cock, first, second and third; Hen, first, second and third; Cockerel, first, second and third; Pullet, first, second, third and fourth; Pen (old) first and third; Pen (young) second and third; and at Madison Square, New York, Cock, third and fifth; Hen, second; Cockerel, eighth; Pullet, first; Pen, fifth and seventh. NOTICE in all FIFTEEN birds among the New York winners.

I WANT YOU

to get my new, handsome winter of 1908 showing

Fashion Book,

HUNDREDS OF LATEST STYLES

with illustrated lessons on Cutting and Dress-making, FREE, and I will send you all the patterns you want for five cts. each. They are the same patterns you have always paid 10c & 15c for at the stores, made by the same people, and correct in every detail.

I publish the FARMER'S CALL, a weekly paper for every member of the family. An especially interesting feature each week are the children's letters; and the Woman's Department is unusually strong and instructive. Among the special features for women folks is its fashions in which I show the 50 patterns. Let me help you to save money.

MY SPECIAL OFFER

Send me 25c and I will send you the Farmer's Call every week for one year (about 1000 pages) and will send my big Fashion Book to you free. I also agree to sell you any pattern you want thereafter for 5c. I can sell them for 3 cts. because I buy them by the thousand and don't make any profit. I don't want any profit. I want your subscription to the FARMER'S CALL. You will save many times the cost of my offer in a year. WRITE TO—J. M. STAHL.

You can use this coupon—cut it out now and mail to me with 25c—10c and 2c stamps taken, but a quarter almost always goes safe:

JOHN M. STAHL—Enclosed 25c for Farmer's Call for one

year, your book of patterns, postpaid, and privilege of buying

patterns at 5c each.

BEST BY TEST

We are now shipping eggs for hatching from intelligently bred, carefully selected "Blue Blooded Buffs" scientifically mated to produce hardy, husky chicks of individual merit at \$10, \$5, \$3 and \$2 per 13, or \$25 and \$10 per 100. Yards headed by such invincible winners as cock winning first and three specials on color at Boston, Indianapolis and Missouri State Show; cockerel winning first, A. P. A. diploma, shape special and the gold special for the best cockerel in the show at Boston; cockerel winning first at New York, and A. P. A. diploma and gold special for best cockerel in the show at the Missouri State Show, etc., and are niched with the sensational females at Boston, New York, Indianapolis, Cincinnati, and the Iowa, Indiana and the great Hagerstown, Md., Fairs. We have successfully exhibited our popular Buffs in nine different states under twenty-one different expert judges and are in position today to ship you eggs from America's most phenomenal egg producers and prize winners that will produce quality that others have yet to attain. We are in this vocation as a business, and it is our business to please. Send your order from this advertisement to the original.

FEED - 10 CENTS PER BUSHEL

Is your main feed for growing chicks and making eggs costing you more than 10 cents to 15 cents per bushel? Do you expect to raise 95% of all chicks hatched this season? Can you care for 2,000 layers and raise 3,000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, "Profits In Poultry Keeping Solved," will tell you how to do it, as well as save you \$25.00 on every 100 chicks you raise to maturity. My third edition or 5,000 copies now ready. 2,000 breeders—W. Wyandottes and S. C. W. Leghorns—managed by my famous system. Eggs for hatching a specialty by the 100 or 1,000 lots at \$5.00 and \$6.00 per 100. No order too large. High grade baby chicks also supplied—particulars free. Send today for free circulars and testimonials. Address

EDGAR BRIGGS BOX A PLEASANT VALLEY, N. Y.

DO YOU USE AN INCUBATOR?

If so, you are very much in need of the INOVO EGG THERMOMETER, if you desire larger hatches and stronger chicks—the kind that will live.

Correct for all Makes of Incubators

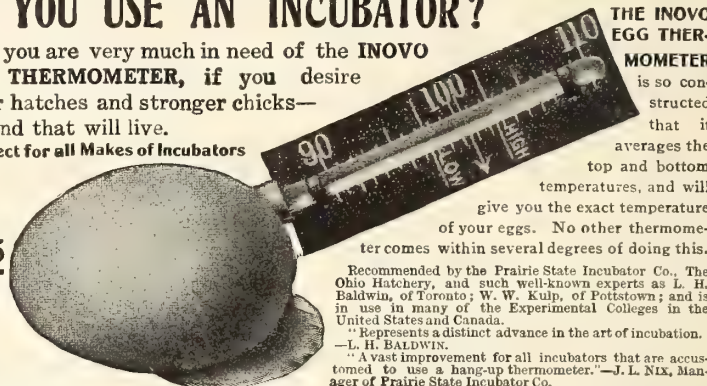

Price,

post-paid

Write for Literature and Testimonials to

H. L. WAGNER, 429 King St., Pottstown, Pa.

THE INOVO EGG THERMOMETER

is so constructed that it averages the top and bottom temperatures, and will give you the exact temperature of your eggs. No other thermometer comes within several degrees of doing this.

Recommended by the Prairie State Incubator Co., The Ohio Hatchery, and such well-known experts as L. H. Baldwin, of Toronto; W. W. Kuhn, of Pottstown; and is in use in many of the Experimental Colleges in the United States and Canada.

"Represents a distinct advance in the art of incubation."

—L. H. BALDWIN.
"A vast improvement for all incubators that are accustomed to use a hang-up thermometer."—J. L. NIX, Manager of Prairie State Incubator Co.

Flower Offers

Without Cost to You

Five Beautiful Roses (Order as No. 101)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Five Fragrant Carnations (Order as No. 109)

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you FARM AND FIRESIDE for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. FARM AND FIRESIDE prints and circulates each month more copies than any other farm paper. That shows how well it is liked!

Send your order promptly to FARM AND FIRESIDE, Dept. D, Springfield, Ohio

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.
BOSTON, 1906. Judged the Houdan Exhibit.
ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.

Also highest honors at **Madison Square Garden, Philadelphia, Pan-American, Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. We do not exhibit at state fairs and smaller shows, nor enter into competition with our customers. Write for particulars.

Just Write Me a Postal for My Price and My Free Book

If you do, I will quote you a special factory price on an Incubator and Brooder that will surprise you. I want every man or woman who raises chickens or who thinks of going into poultry for profit, to get my 1909 offer and book and learn the remarkable value I am giving in my

Racine Incubator

Freight Prepaid—Liberal Free Trial

It has every real improvement—many exclusive points of merit. Is the result of 27 years of practical experience of the oldest incubator inventor and operator in the country.

This practical experience of this practical man is yours free with the Racine Incubators and Brooders, safe and sure, for your protection. Guaranteed to hatch more and healthier chicks, under same conditions than any other machine made. I also make the best Hot Water Brooder—priced proportionately low.

But write today for my "Book About Incubators" and special factory prices.

Write me personally—G. C. Wheeler, Mgr.

Racine Hatcher Company,

Box 26

Racine, Wisconsin

We have warehouses everywhere.

We will give you A Record Book

It will show you how many eggs were laid today compared with last month or last year, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. You can find out what your costs are and what your profit really is. Men who are succeeding in other lines of business keep such records. Why should not you, when we start you free?

Ertel's Poultry Diary

has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to feed—how to treat sickness.

The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay the freight. Get Ertel's Poultry Diary and watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out of date machine. Better write us today.

POTTERIZE YOUR FLOCK

by using science and system in picking out the layers from the non-layers and drones. Keep only the most prolific layers for your breeders. Two hundred eggs a year from each hen is easy if you keep only laying hens in your flock and breed from them alone. **The Potter System** is used by over 25,000 poultry keepers and is recognized as the greatest discovery of the century in the line of selecting laying and non-laying hens and egg production. Keep only layers and cut down the expense of feeding loafers and drones. When you Potterize your flock you use the Potter System on it and can keep fewer hens, get more eggs and make more money by using it.

DON'T KILL THE LAYING HEN

Is the title of our book on the Potter System. It is without a doubt the greatest book ever published on the subject of laying hens and egg production. Our new 100-page book is just out and it contains knowledge not found in any book ever published. The table of contents given below will give you some idea of the many subjects covered and the valuable knowledge it contains:

How the egg grows; how nature controls the laying organs; the secret of the Potter System; how to pick out the non-laying hen; how to determine the first stage of egg development; to know how far the hen is toward the laying point; how to pick out the hen that is laying; to know the hens that are the most prolific layers; to know how and when to cull the non and poor layers out of the flock; to know the ones to sell and the ones to keep; why early spring is the best and most practical time to cull the poor and non-layers out of the flock; how to tell the hen that has laid out a batch of eggs and other information regarding setting hens; the best way to break up the broody state; how eggs can be produced in winter and some of nature's laws regarding egg development explained; how the laying organs are affected; when the hens are infested with vermin; how to avoid wintering hens that are likely to be poor winter layers; how over feeding before egg development starts may reduce the egg production; the laying hen should be educated, when, how and where; how to separate the poor layers from the good without handling, or how they will separate themselves; how to buy hens in the fore part of winter that would make good winter layers, and sell them again at a good profit in the spring; how roup and similar diseases affect the laying organs of hens, also how the laying organs become disabled by other causes; ten ways to suspect hens that are not laying; three ways to prove their laying condition.

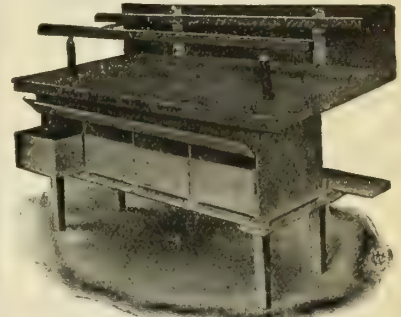

You should not delay in learning the wonderful Potter System which is helping so many poultry raisers to make more money on their fowls. Our new book will prove a new revelation to you in the line of keeping only laying hens.

Potter Poultry Products are for particular poultry people and if you are particular you will write today for our large new catalog and circulars on the Potter System. Three cents to cover postage will bring them to you by return mail.

T. F. POTTER & CO., Box A, Downers Grove, Illinois

Potterize Your Hen House Too

by using Potter Poultry House Fixtures, then you will have a complete, convenient and sanitary equipment in your hen house. Potter Fixtures have been on the market for over eight years and are used and recommended by thousands of poultry raisers. They save you time, labor and worry and keep the quarters clean and sanitary and your fowls healthy.

Our new 100-page catalog, just issued, tells all about Potter Fixtures, Perfection Feed Hoppers, Trap Nests, Incubators and Brooders, Potter's V. B. Poultry Foods and all kinds of supplies. Send for our large catalog showing the very best goods to be had and at the right prices.

Model
Incubators

Model Brooders

THE incubator season of 1909 finds every essential feature retained that has made Model Incubators famous for hatching chicks that live. Model Incubators have always hatched because construction, heating and ventilating are mechanically perfect. I use selected chestnut for exteriors—the same wood used by piano makers for "building up" work. I have yet to hear of a single instance where a panel has swollen or checked, or a joint opened. The complete insulation surrounding the egg chamber, protects against sudden and fatal changes in temperature, which is accurately controlled by our compound corrugated leaf thermostat. The improvements of 1909 are:

Model Moisture Regulator, which can be attached to any Model Incubator, to supply moisture when needed and controls humidity and doing away with spraying of eggs, damp cloths, wet sand boxes, and other uncertain processes.

Model Patented Flame Extinguisher, preventing continued smoking or overheating of the burner and oil.

We have made this Flame Extinguisher a part of the regular equipment of 1909 Model incubators.

Model Patented Automatic Lamp Filler, to be attached to one or several incubators or brooders, to keep the oil fountain filled to uniform height.

The strong, vigorous chickens hatched in Model Incubators can best be raised to maturity in Model Brooders, and early hatches must of necessity be raised in Brooders. The Model embodies distinctive construction. Its perfect ventilation, thorough lighting, diffusion heating system, and convenience in cleaning make it the most hygienic brooder made.

Most Important. You ought to get posted on Model Incubators and Brooders, so send today for complete catalog describing them and Charles A. Cyphers' other successful inventions.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses"—A 64-page book on poultry house construction.

125 Egg Incubator and Brooder Both For \$10

Why pay more than our price? If ordered together we send both machines for \$10.00, and pay all the freight charges. Hot water, double walls, dead-air space between, double glass doors, copper tanks and boilers, self-regulating. Nursery underneath the egg tray. Both Incubator and Brooder shipped complete, with thermometers, lamps, egg-testers—all ready to use when you receive them. All machines guaranteed. Incubators are finished in natural colors showing the high grade lumber used—no paint to cover inferior material. If you will compare our machines with others offered at anywhere near our price, we will feel sure of your order. Don't buy until you do this—you'll save money. It pays to investigate the "Wisconsin" before you buy. Send for the free catalog today, or send in your order and save time.

SHE'S a Part of Siems' Plan

We Have the World's Record For Big Hatches

Siems' Way is Nature's Way

BECAUSE WE HATCH NATURE'S WAY

Only patented incubator in the world which uses the hen all the way through hatching process is

THE SIEMS NATURAL HEN INCUBATOR

Patents issued—No. 440,660 and No. 712,339—Also Foreign Countries.

J. F. Siems Patentee

You can't beat nature. There is no question about it, we have the greatest hatcher in the world. You get more chicks from the same number of eggs. You get better, stronger chicks; chicks that live. It is the incubator that absolutely does run with least trouble and expense and its first cost is a fifth to a tenth of what you must pay for other incubators.

200-Egg Size Costs Only \$3.00

Why pay more? The Natural Hen Incubator is the one everybody can run and make a success of. Over half-million in use, all giving satisfaction. More Agents Wanted. Write now for free catalog giving all particulars.

Natural Hen Incubator Co., B. 4, Los Angeles, Cal.

How To Test Any Roofing

FIRE

Don't pay out good money for roofing until you first test the roofing you're going to buy. This applies to Vulcanite as well as to all other roofings. We want you to test it against heat, fire, cold, acid, water and anything else you like. Bend it—twist it—try to tear it. Compare it with any other. You will know absolutely then, there is none as good as Vulcanite.

Has Stood the Tests for 60 Yrs.

Best by Any Test

HEAT

STRONG DURABLE

Vulcanite ROOFING

is coated with a mineral product that does not freeze nor crack in winter, nor crumble and peel off in dry weather; it is absolutely water, wind, acid, weather and fireproof. For farm buildings and outhouses **Vulcanite Roofing** is the favorite of the farmer who figures cost by years of service and not by the first cost. Any handy man can lay Vulcanite Roofing. Caps and Cement come with every roll—so all you need is a hammer. Once on, Vulcanite stays on for good.

It will pay you to learn more about Vulcanite—the roofing with 60 years' experience in every roll. A postal will bring you a sample with which you can make the tests—also our free book which gives interesting facts about roofing. Write today. Sold by dealers. If yours can't supply you write us.

AUG. D. ARNOLD : BOX 777 : DILLSBURG, PENNA.

Irenhor, valued at \$1,000

Again at Indianapolis, Feb. 1909

The quality show of America, Condit's White Rocks won every first, three seconds and four third prizes, and the grand challenge \$25.00 Silver Cup for the best exhibit of quality, all breeds and varieties competing. This with my record of every first, two seconds and two thirds at the Great Indiana State Fair, 1908, and four firsts and five seconds at Marion, Ohio, December, 1907, and every first and color special at Indianapolis, February, 1907, stamps the quality of the Condit strain. I make no boasts of winnings at local shows or fairs, but in the strongest classes in the largest shows, and under America's leading judges, my birds bred by me, have shown their superiority. If you want single birds, trios, or pens, let me price them. Eggs from my choicest matings. Every pen headed by prize winner male. \$5.00 and \$10.00 per setting.

P. B. CONDIT, 2138 N. Capitol Ave., Indianapolis, Indiana

The Famous "Bar-letts"

HOLD THEIR CLAIM, CHAMPIONSHIP WINNERS AT BUFFALO

Barred Plymouth Rock
owned by George W. Hillson
Amenia, N. Y.

At the wonderful Buffalo Show, Feb. 1 to 6, 1909, George W. Hillson's Barred Plymouth Rocks made a phenomenal record against the best of the East and Central West by winning Four (4) of the possible Five (5) First Prizes, Third Cock, First Cockerel, First and Second Hens, First and Fourth Pullets, First Exhibition Pen, the New York State Challenge Cup for Best Cock, Hen, Cockerel and Pullet. My "Champion of Buffalo" First Prize Cockerel is a masterpiece in the art of breeding and is beyond question the greatest Barred Rock living. My Pullet "First Attempt," winner of Three (3) Specials, New York, 1907-08, is here First Hen and Champion Colored Female in the show. Her record is equaled by no other Barred Rock female in the world. My First Prize Exhibition Pen contains the grandest conformation of color in male and females of any exhibition pen that ever graced the showroom.

For sale: Birds that will reproduce themselves. Eggs from the grandest matings in the world, at prices within the reach of all. One setting, \$5.00; two settings, \$9.00; three settings, \$12.00; four settings, \$15.00. Fine illustrated circular free.

New Poultry Book**Origin and History of All Breeds of Poultry**

WITH 198 BIRDS ILLUSTRATED IN COLORS

For years the needs and demand of poultrymen has been illustration of birds in natural colors. American Poultry Journal's new book "Origin and History of All Breeds of Poultry" furnishes illustrations in colors of all recognized varieties of chickens, turkeys, ducks and geese, both male and female.

The First Time

Never before in the history of the poultry business have all recognized varieties been pictured in colors and assembled in one harmonious uniform series of illustrations, perfect in shape, color, feather markings, uniform in size and correct in comparative proportion.

Origin and History

As time goes on and older breeders drop out the origin of different varieties is lost—their history obscure. In this book has been collected all the known reliable history, relating what cross matings produce present varieties and the names of the originators.

Mating of Breeds

The secrets of mating popular breeds are described, showing how success can be obtained

in producing show winners, and the greatest possible results in egg productions.

The Book Described

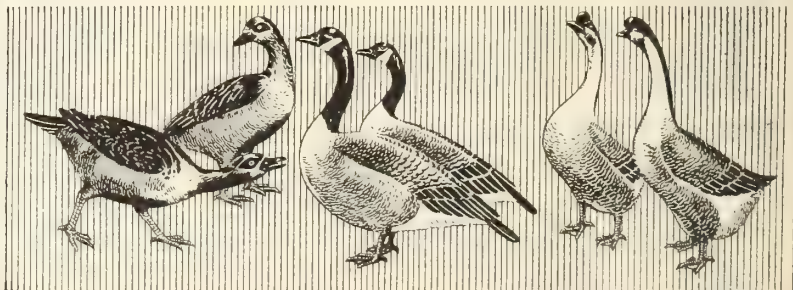

The book contains eighty pages and cover, size of page 9x12 inches. There are 198 colored illustrations of fowls, including male and female, of all recognized varieties of chickens, turkeys, ducks and geese, giving the origin and history and describing the best methods of mating to produce the desired results.

The illustrations were made by Mr. Samuel Stoltz who has proved by this work that he is the greatest all-round poultry artist in the world.

The articles are compiled from the writings of the best known, most successful breeders in the poultry business.

Introductory Price

Thousands of dollars and years of preparation have been put into this book. It is offered at the Bargain Introductory price of \$1.00 a copy, while in connection with one year's subscription to this paper it can be secured at a reduced price for the two as will be seen by the special offer below:

THAT TIME IS MONEY

In the poultry business as in every other line is true; then why spend TIME as well as money trying to get started with anything but the best?

And Duston Saves It

for you, for as one Pennsylvania customer writes: "I have been buying from all the breeders for six years and was never able to get anything good until I bought eggs from you." It is true in hundreds of cases. This year I have better matings than

ever before and my customers will get the benefit of the truly wonderful gains I have made. To prove: New York, the Quality Show of the World, (it's simply foolish not to admit it), where the most expert breeders meet each year, as well as the best that can be bought in all parts of the land. I won first, fourth and fifth cockerels; first and third pullets; second hen; second pen and fifth cock. First cockerel considered the finest male ever exhibited at the Garden, and second pen was set back from first only on account of undeveloped condition of cock's tail. Won shape special on male and color special on male, with A. P. A. diploma for best White Wyandotte male, yes!

WINNER OF FIRST, NEW YORK, 1908-9
BRED AND OWNED BY [signature] [signature]
ARTHUR DUSTON, SOUTH FRAMINGHAM, MASS.

First Display

for the second time in three years! These birds not bought but selected from my pens right here. Don't that tell who's breeding the best in

White Wyandottes

Then why hesitate! Eggs from best matings, \$5.00 a set; two sets, \$8.00; three sets, \$10.00; five sets, \$15.00, and \$20.00 in hundred lots. Send 10c for catalogue to the breeder that has made possible the "world's best flocks."

WHITEWASHING

POULTRY HOUSES

with a brush is a slow, dirty, tiresome failure. You can't fill up the cracks and crevices where vermin multiply.

DEMING SPRAYERS

Have made whitewashing easy. The pump throws a fine, forceful spray, filling every crevice. Having an air chamber it can be operated very slowly. Our Bordeaux, non-clogging nozzle is furnished with each whitewashing outfit. "Universal Success" No. 6621's "Six Pumps in One." Send today for "Modern Whitewashing" and catalog FREE

The Deming Company,
730 Depot St. Salem, Ohio

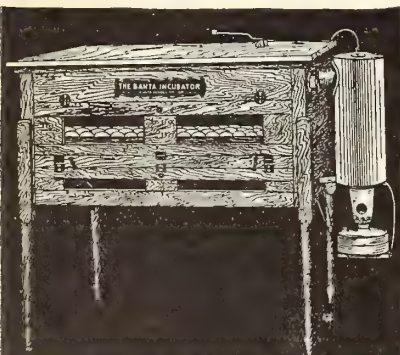

MOLTING TIME

Fowls need plenty of feather-growing material when old plumage must be replaced with new growth. Don't leave the birds to shift for themselves. Shorten their molt by feeding plenty of

Pearl Grit

It supplies Silicon for feathers and other needed elements. "Throw Pearl to Poultry and Watch Results." Booklet free. The Ohio Marble Co., Box 215, N. Wayne St., Piqua, Ohio

THE BANTA

The success of The Banta has been made through the success of the poultry raisers who bought it, and their success was made possible by the efficiency of the machine itself. "We got

103 Chicks from 120 Eggs

the first time. We think this is fine," writes M. C. George, Gentry, Ark.

The Banta Brooder is as good as The Banta Incubator and can be used outdoors without shelter with satisfaction. The Banta Brooder is necessary for the continuous growth of the chick. Keep them growing steadily and you are on the road to get the right kind of poultry profit. Bulletin No. 10 will help you. Catalog and Bulletin free. Write for it now.

THE BANTA-BENDER CO., Dept. 10, Ligonier, Ind.

HOUDANS OF QUALITY

I have won more premiums during the past year than any Houdan breeder in America. Intending purchasers will note that my winnings are up-to-date and were made in the largest shows in this country. **Chicago, 1908** 1st cock, 1st, 3d, 4th hen; 3d ckl., 2d pen. **ST. LOUIS, Nov., 1907** 1st cock, 1st, 2d hen, 1st ckl., 1st, 2d pullet, 1st pen. **INDIANAPOLIS, 1908** 1st cock, 1st 2d hen, 1st ckl., 1, 2d pullet 1st pen. **BOSTON, 1907** 1st ckl. **NASHVILLE, Tenn. State Fair, 1908** 1, 2, 3 cock, 1, 2, 3 hen, 1 ckl., 1, 2, 3 pullet, 1, 2 pen, \$25 silver cup for best display. **INDIANA State Fair, 15** ribbons—a clean sweep. If you want winners I can furnish them, and don't forget that my Houdans are the greatest egg producers of the age. Send for my catalog; also my new mating list, ready in Jan.

TRAUB BROTHERS, Boston Block, MINNEAPOLIS, MINNESOTA

Orchards make Ideal Yards for Poultry

The poultry is of vast benefit to the trees and the trees are equally good for the poultry. The poultry supplies all the fertilizing the trees need, and the trees supply shade in very hot weather, and protection from storms. The poultry keeps down injurious insects of all kinds, and the trees supply many kinds of food for the poultry.

The Poultry Will Thrive Better

will be clothed in much handsomer plumage, and will produce more and better eggs if allowed to run in an orchard than if kept cooped up or given the ordinary style of poultry yard in which to run.

The trees to be grown in a poultry yard should be dwarf in size, and such as may be trimmed so as to have no boughs close to the ground, in order to give head-room and prevent the poultry from injuring the fruit. The best kinds are plums, peaches, dwarf apples and dwarf pears.

The Trees Will Grow Better

The trees will be covered with finer foliage, and will produce more and better fruit if planted in a poultry yard than anywhere else. No two things in nature are more mutually beneficial.

We make a specialty of growing dwarf trees for poultrymen, carefully cultivated and trimmed to meet the requirements of the poultry yard. These trees are grown with the same care which distinguishes all our stock, and are the same kind which have made our nurseries famous.

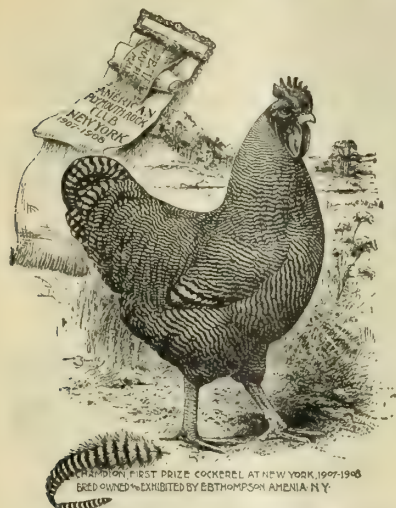

Everything for the Orchard

is grown in our nurseries, as well as a splendid assortment of Trees, Plants and Shrubs for beautifying the home grounds. We have issued one of this year's finest catalogues, and much finer than any we have ever sent out before. It is full of valuable information for the orchardist, gardener and home builder. Send for it—it is free for the asking.

HARRISON'S NURSERIES, Box 440, Berlin, Maryland

The "Ringlets" Stand Alone

VICTORS OF THE FIELD

First Prize "Ringlet" Cockerel and winner of Special Prize for "Champion Male" at Madison Square Garden, New York, Winter of 1907 and 1908. From photograph—worth more money than any Barred Rock ever produced; living or dead.

I now have on my farm the largest and finest lot of superior exhibition and breeding birds I ever owned; they show the "Ringlet" barring and the sharp contrasting colors that win under all judges.

Richly illustrated 50-page catalogue mailed upon request; it is full of original pictures of New York winners from life. 1000 grand breeding and exhibition cockerels for sale. Elegant hens and pullets in any number. Show birds fit to win in any competition. Eggs from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18.

MISSOURI SQUAB CO., St. Louis, Mo.

MEDICATED CHARCOAL

MAKES HEALTHY BIRDS

More birds are killed by bowel troubles than by any other form of disease, particularly among the recently hatched chicks. We positively guarantee Medicated Charcoal to cure cholera, diarrhoea, or any bowel complaint in chicks or fowls within a few hours. If it is given to your birds regularly every few days it will prevent such diseases from getting a hold on the flock.

It is a germ killer, blood purifier, relieves gas, makes digestive organs healthy.

HEALTHY BIRDS MAKE HEALTHY PROFITS

It is the only remedy ever discovered for the cure of "White Diarrhoea." This scientifically prepared remedy is in use on the largest poultry plants throughout the United States. Guaranteed under Government Pure Food Laws. 10 lbs. \$1.00—25 lbs. \$2.25—50 lbs. \$4.25. If your dealer can't supply you, send direct to the manufacturer.

Van Wie Poultry Supply House :: Schenectady, New York

LOOK! This is a four months' old Black Orpington ckl. Send 10c for club catalog, now ready. Tells why Blacks are best of Orpingtons. Won great Australian Government laying contest; all breeds competing. Most rapid grower; largest fowl in the world. Color suited to town and city as well as to the country. Tells why highest prices in history have been paid

for birds of this variety. Milton W. Brown, Secretary National S. C. Black Orp. Club, Sta. L. Cincinnati, O.

COLLIES FOR SALE

Brood matrons, grown dogs and puppies. We can furnish pairs, not related from the best imported and American bred stock. If you want a dog for the poultry yard, farm, city watch dog or a companion for children, the Collie is the kind you should buy. They are money makers and money savers. Build a partition fence and you can raise poultry and dogs with one expense. Send 25c for booklet on training. Mention A. P. J. and write R. Clark, Sec'y and M'r Sunnybrae Kennels, Bloomington, Ill.

80c for Corn

This is a good price for corn. The man who gets 16 lbs. of pork out of a bushel of corn fed to his hogs gets this price. Some have reached 18 lbs. The man that only gets 8 lbs. has something to learn that would benefit him.

Some farmers waste a third of their feed given to hogs because they are not informed of the best methods of feeding.

What to feed and what combinations to make, to cheapen the feed for the best results and profits, is what each farmer and feeder should know.

J. J. Hill, the long, level-headed railroad king and philosopher, says: "We can double the yield of our crops by knowing how to farm right."

The American Swineherd

is a specialist and will teach you how to get the best results and make the biggest profits from hog raising and corn growing. Hogs and corn go hand in hand.

Why not learn how to make two pounds where one was made before and grow two bushels where one was grown before.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader in its line of feeding."

Special Offer: Send us \$1 for four years' subscription to the AMERICAN SWINEHERD, and we will send you as a premium a copy of the Pig Feeders' Manual, a practical, instructive book on feeds and feeding swine worth \$1 itself. This equips you for a successful hog business and is the "Cheapest Expert Help You Can Hire."

A NEW DISCOVERY!

WHICH WILL POSITIVELY DETERMINE THE FERTILE EGG BEFORE INCUBATION

"XX" means fertility. Every good egg registers at some point on the scale of "The Breeders' Magic Egg Tester," according to its condition, and this wonderful little instrument tells instantly whether an egg is fertile or not BEFORE incubation. The scale reads like a thermometer and so easy that any 10-year old child can test eggs. The fertile eggs register at "XX" and the tester never fails to tell whether fertility is strong, weak or absent.

A well-known poultryman of Western New York says: Niagara Falls, N. Y., Jan. 19, 1909. "Used your Breeders' Magic Egg Tester since Aug. 1908. 100% correct in all kinds of tests. Simply perfect. Invaluable." F. C. Seiler. Breeders' Magic Egg Tester sent complete, ready to use, by mail post-paid \$2.00. Write for circular. Demonstrated in the Poultry Department at Buffalo Agricultural Fair with over 500 sales in the county. Order filled on day received. Money refunded in every case if not satisfied.

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance.

With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.

113 South Clinton Street

White and Buff Wyandottes

EGG-LAYING AND PRIZE-WINNING STRAINS

At the Vermont State Fair this season we won four first, three second and two third prizes. The poultry exhibit at this fair was said to be the largest ever seen in New England—over four thousand birds competing. This number does not include pig-sons. The competition in the Wyandotte classes was very strong. It was worth while to win there. At the different county fairs we did, of course, even better.

While we breed for quality our birds must first make good as layers before they are admitted to our breeding pens. We use trap nests and keep a complete set of records. Every bird is raised on free range and has every opportunity to make the strong, healthful growth that the Green Mountain country favors in all kinds of live stock.

Eggs for Hatching—White Wyandottes: Utility Stock, \$1.50 for 15 and \$6.00 per 100. From best pens, \$3.00 for 15 and \$10.00 per 100. Buff Wyandottes, \$3.00 for 15 and \$10.00 per 100. Send for circular.

OTTERBURN POULTRY FARM, W. R. Frazier, Manager, Lock Box B11, Pittsford, Rutland County, Vermont

RIVER HOME POULTRY YARDS

LIGHT BRAHMAS BARRED ROCKS

For several months we have been telling you in this journal that River Home Light Brahmas and River Home Barred Rocks are in the very first rank and that they are great prize winners. Last month we cited our recent Chicago and Detroit winnings as proof of our statements, but since that time great poultry shows have been held at Boston, Toledo and Indianapolis and of course we were there. We have a large list of prior prize winnings, but will now tell you only about the prizes we have taken in the last ten weeks.

At the Last Chicago Show December, 1908—On eleven Light Brahmas entered by us, we won twelve prizes in strong competition. We took first, second and fourth cocks; first and second hen; fourth and fifth cockerels; second, fourth and fifth pullets, first pen and first display.

At the Last Detroit Show January, 1909—On eight Light Brahmas entered by us, we won first, second and third cocks; first, third, fourth and fifth hens; first pullet and first pen, being nine prizes; also on Barred Rocks, second cock.

At the Last Boston Show January, 1909—On two male Light Brahmas entered by us, we won fourth cock. These birds were shipped 700 miles and were unattended by us.

At the Last Toledo Show January, 1909—On Light Brahmas we won first, second, third, fourth and fifth cocks; first, second, third, fourth and fifth hens; first, second, third, fourth and fifth cockerels; first, second, third, fourth and fifth pullets; first pen and on Barred Rocks third and fourth cocks and fourth cockerel.

At the Last Indianapolis Show February, 1909—On Light Brahmas we won first, third and fifth cocks; first, second and fourth hens; third cockerel; fourth and fifth pullets. These prizes were won in strong competition.

WHAT FURTHER PROOF DO YOU WANT?—Show birds and hundreds of utility birds for sale at reasonable prices. Eggs \$5.00 for 15, \$15.00 per 100. Our eggs are fertile and you can depend on them.

River Home Poultry Yards, T. H. Tracy, Owner, F. J. Stamm, Mgr., Box B, Perrysburg, Ohio

The Incubator YOU Want is the One

Put Your
Confidence
in this Machine
You'll make no
Mistake

It makes no particular difference to you on what principles a machine hatches—**BUT**

It does make a big difference to you how many "livable" chicks you get from each hatch.

The common trouble and serious disadvantage of all other incubators is the great number of chicks that "die-in-the-shell" and also soon after being hatched.

What you and every other buyer of an incubator want is a machine that hatches *chicks that live*.

When we tell you *we have that incubator—the one you want*—one that without any "fuss" or bother, *hatches chicks that live* and the most of them, we don't base our

claim on *theory or guesswork*, but instead, on actual, practical results *already* obtained by those who are operating Prairie State machines. For instance, read Mr. Leon L. Hough's letter here on the right. Now read the other letters below.

Don't they prove conclusively that the Prairie State are the machines you want?

That Hatches the MOST "Livable" Chicks

12,000

Big Strong Chicks

Were hatched by me in Prairie State Incubators during April, May and June this year. The hatches averaged better than 90 percent, and went as high as 98 percent. These chicks were shipped as far as 2,000 miles with only seven reported dead in the whole 12,000. How is that for vigor?

LEON L. HOUGH.
Canisteo, N. Y.

Prairie State Incubators and Brooders

Blanke & Hawk Pine Bluff, Ark., Sept. 14, 1908.
Supply Co.
St. Louis, Mo.

Gentlemen:—The Prairie State Incubator that I purchased of you in the spring does fine work. I have never had any experience with one before, yet I took off 3 hatches, all over 80 percent of the fertile eggs. It not only hatches big percent, but it hatches big, strong, lively chicks, the kind that live and grow right from the start. I will need another before long.

Respectfully yours,
(Signed) A. P. RYLAND,
"The Chicken Man."

Orchard Hill Farm
Brookfield, Wis., July 18, 1908.

Hunkle Seed Store,
37 Chestnut St., Milwaukee, Wis.

Dear Sirs:—The Prairie State Sand Tray Incubators I purchased of you are the finest hatching incubators I ever ran. I found the chicks hatched in them lived better, were stronger, more vigorous and full feathered than those I hatched in the —. The Sand Tray

solves the moisture problem. I got larger hatches and less dead chicks in the shell. I have traded off my other incubators and installed the Prairie State. By using them I get more and better chicks. With best wishes I remain,
Very truly yours,
A. E. WILLIAMS.

Oakham, Mass., June 23, 1908.

Prairie State Incubator Co.
Dear Sirs:—I like the Prairie State machine I bought very much. Of the 3 hatches I averaged 85 percent or better, and no cripples or weak chicks. The chicks were larger and stronger than those hatched in another machine without sand trays—lost none by sickness. Sold about 300 in all this spring, and as far as I have heard the parties are well pleased with their chicks. I find I can run the machine on one-third the oil it takes to run any other hot air machine. I never had such big, strong, hardy chicks as I got this year from the Prairie State. I am perfectly satisfied with the work it does.

Yours truly,
MRS. M. W. EDSON.

have been improved each year and are without doubt the most satisfactory on the market.

Our new catalogue is just off the press, and you will find it one of the most practical and helpful books on artificial incubation. Tells how we overcome the heavy loss both from "dead-in-the-shell" and "white diarrhoea." Write for book today.

PRairie State Incubator Co.,
468 Main St., Homer City, Pa.

A GREAT OFFER

Two Leading Publications a Whole Year and a Beautiful Colored Picture all for the Price of One

WE have perfected arrangements whereby we can send the best and most practical farm and family paper published, FARM AND HOME, in connection with our own publication, on the remarkable terms as given below.

Semi-Monthly
National

FARM AND HOME

24 Numbers
Over 600 Pages

We are unable to give but a brief description of Farm and Home, which is unequalled for variety and excellence. It is pure, bright and practical all the way through, teeming with all the latest and most reliable information that experience and science can supply. For village, suburban and rural residents it will be found well-nigh indispensable, meeting the requirements of the entire family. No better proof of its popularity can be offered than its enormous circulation, which extends into every state and territory, each number reaching over two million readers. Sample copy sent free on request.

"Washing Day"

FREE THIS COLORED PICTURE FREE

An extremely attractive picture, appealing forcibly to every lover of child life—and who does not enjoy watching such a scene of complete innocence and happiness as the artist has so carefully depicted in the painting? From an artistic standpoint as well, this picture makes a most favorable impression, with its dainty and beautiful colorings, its accuracy of detail and lifelike arrangement.

The above illustration, although greatly reduced in size, gives a fair idea of its appearance. This picture is made in the very popular panel shape, so desirable for narrow wall spaces and measures 12 x 20 inches in size. It is mounted on heavy lithographic paper with narrow white margin all around for framing, if desired.

OUR OFFER

American Poultry Journal, One Year 50c } Both For 60c
Farm and Home, One Year 50c } Only

As a special inducement for prompt replies to all who accept the above offer within thirty days, we will also send the picture above described without further charge. Address all orders to

American Poultry Journal Pub. Co., 113 So. Clinton St., Chicago, Ill.

If You Breed Kellerstrass Strain of WHITE ORPINGTONS

The Dickinson Brands of Feed Are Graded to Meet the Requirements of All Ages

Sun Chick Starter

A primary grain feed for chicks during the first 20 days

In addition to the regular assortment of grains and seeds, this mixture contains steel cut oat meal, granulated bone and fine charcoal—a combination that insures proper development and healthy condition. To feed "Sun" Chick Starter to young broods means more money to poultrymen.

Crescent Chick Feed

This is a complete grain feed for chicks from three to eight weeks

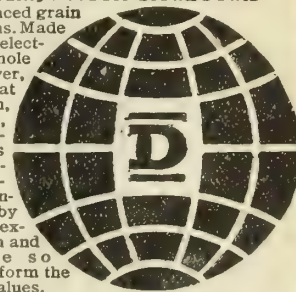

It is made of re-cleaned, cracked grains and seeds, hulled oats, fine granulated bone and fine charcoal. Just coarse enough to meet the requirements of growing chicks. It takes them through the critical period of chick life in prime condition, producing a healthy, rapid growth. Crescent Chick Feed is intended for feeding until the chickens are large enough to be fed the coarse Scratch Feed. Experienced poultrymen know the value of right feeding at this time. It means better and quicker results.

Globe Scratch Feed

A Standard Poultry Feed for Grown Fowls

A perfectly balanced grain ration for all seasons. Made of most carefully selected cracked and whole grains with sunflower, oil cake, buckwheat and charcoal, which, as combined by us, prove most effective in keeping fowls healthy and in increasing egg production. It is scientifically prepared by practical poultry experts. The protein and carbohydrates are so maintained as to form the greatest feeding values.

The Dickinson Feeds Insure Rapid Growth, Health and Good Layers

You take less chances with your poultry when you use Dickinson's feeds. Our trade-mark brands are our guarantee to you of the highest grade of materials and the most successful ingredients, scientifically combined, for the promotion of rapid growth, perfect health and the increase of egg-laying capacity. Take the testimony of the leading poultrymen of the country. Dickinson's feeds have been used on the most famous poultry farms for many years. Our feeds have made the finest fowls and the steadiest layers everywhere. There's a good reason. The manufacture of poultry feeds is a science with us. Our materials are subjected to the most rigid inspection. Only the sweetest, soundest cracked grains and

In addition to "Sun" Chick Starter, "Crescent" Chick Feed and "Globe" Scratch Feed, we make the "Queen" Poultry Mash—a selected ground feed for fowls of all sizes, especially laying hens—and "King" Pigeon Feed, a mixed grain ration especially adapted for squab fattening. Ask your dealer for any or all feeds of the Dickinson line. If he doesn't carry them, write us and we will see that you are supplied.

seeds are accepted—and these are carefully sifted, cleaned and re-cleaned until they are absolutely free from dust and chaff. Naturally such materials contain a larger percentage of nutriment and fattening properties than damaged or musty grains. Not only are our ingredients perfect, but they are combined under the direction and supervision of experts who have made poultry feeding the study of their lives. Look for the trade-marks. They mean results—the largest returns in eggs—the healthiest fowls—the greatest number brought to maturity. Remember, the life of the chicken is in its feed. It is only the finest birds, the steadiest egg layers that pay—the kind of poultry that Dickinson's feeds make.

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREED

I have won more prizes at Madison Square Garden, New York, in the last ten years than all others combined. My winnings at Madison Square Garden this year as follows:

First, Second, Third and Fourth Cock
First, Second, Third and Fourth Hen
First, Second, Third and Fifth Cockerel
First, Second, Third and Fourth Pullet
First Pen
The President's Silver Cup and every special offered.

You cannot win without my strain. Every bird that won at Madison Square this year was directly from my yards, or from my strain, except one pen. They have been the leading winners for thirty years in America's greatest shows from the Atlantic to the Pacific Coast. It is the most prolific laying strain on earth and has been in hundreds of laying contests over the whole world and has not yet been defeated. Mating lists free. Stock and eggs for sale at all times. Crescent Poultry Farm, Frank Foy, Prop., Des Moines, Iowa

Foy's Big Book---Money in Poultry and Squabs

Describes and illustrates all the leading varieties of pure bred fowls and Homer Pigeons for squab raising. Tells you all about how to raise poultry for profit, how to feed and mate, all about diseases and remedies, and a great mass of useful information. Gives plans for building poultry houses, describes and illustrates the best incubators and brooders and the famous Crescent Poultry Farm, which is the largest poultry farm in this country devoted exclusively to the rearing of pure bred poultry and pigeons. Important Advice—Tells you how to start the business in a small way and grow big. My specialties are thoroughbred fowls of a high quality, and Homer Pigeons for raising squabs. I can supply eggs for hatching from all leading varieties by the single setting or in large lots for incubators. My prices are low. The quality is high. All who want to keep posted in the poultry business, or contemplate purchasing anything in the above line, should send for this book. Mailed to any address for 4c in stamps. Write your wants and mention A. P. J.

SELECTION OF BREEDING STOCK.

Sexual Characters of Paramount Influence—Nature's Laws Cannot be Lightly Trifled With—Immature Males Should Not be Used in the Breeding Pen—Importance of the Proper Type of Female in the Pen.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Me.

In the selection of breeding stock the individuals that have developed most strongly the primary characters of their own sex should always be given the preference, but as this matter of strong sex individuality is not always taken into consideration by the average breeder he, in many cases, works against his own success because success in full measure can never be attained except this matter is fully understood and bred for, as well as any other characteristics of the breed.

There are effeminate males and masculine females—those in which the characters of the opposite sex are unusually developed and it is needless to say that such does not make the best parents from which to breed.

In the selection of the male bird, none but a fully mature bird should be used to perpetuate his kind, and by a fully mature bird we are to understand a bird which has developed all his secondary sexual characters as near to full perfection as it is possible.

Nature has some laws that cannot lightly be trifled with and this is one of them; for, though it is true that an immature bird may be bred from, yet this same bird under more natural conditions would never find enough mates to do much damage to the type of the breed.

The older bird is better furnished with means of defense, and the younger is routed from the breeding preserves, and until by the means of successful battle he can maintain his position as sire of the flock in the natural state, his chances are very slender for propagation.

In fact, this state of things can be observed in almost any farm yard where the poultry is left to themselves, for here it is invariably the male bird with the most vigor and the most fully matured sexual characters that becomes what is customarily called "the cock of the walk."

Where birds are bred for certain desirable characters as to plumage and other standard requirements, things take on an entirely different aspect for natural selection and the survival of the fittest are set aside, supplanted by artificial selection which may, as we all know, work an entire change in a species for better or worse, as the requirements of the fancy may dictate, which is really the guiding and in many instances the ruling principle of the poultry world today, and making breeders do what their better judgment pronounces the final undoing of the breed.

Now, a male bird may be strong and active and in good physical health, and yet be a poor breeder. He is, rather, an eater; he puts on flesh, is a glutton, a hanger-on, that first and foremost attends to his own needs in preference to those of his consorts with which he is mated. He would in case of encroachment of another male not show fight more than a minute, run, hide his head in a corner and utter sounds very much like a hen in distress, wings hanging, tail dragging—a coward and effeminate all through, that never for a moment could sustain his sireship of the pen if it had to be fought for.

On the other hand, a male may be in poor health and yet

be a strong breeder. He knows, or nature knows, that his time is limited and so he gives up reluctantly to the encroachment of other males on his premises and it is only for sheer lack of strength that he is vanquished, but never for lack of courage.

Now, either one of these males should be avoided, it should be the purpose of the breeder to encourage every atom of the sexual instinct in his sires and make it a strong point in his matings never to use, if it can possibly be avoided—and it must be avoided—any male of the above description.

I have seen males at noted shows, fine in feather, much lauded by their owners, but birds that would never fertilize another egg—passe in every sense of the word, and I have also seen birds of the other description that were too weak to keep on their feet, birds that it would take considerable nursing to keep through the winter and that only the summer season would make of use, but only to perpetuate a very undesirable line of breeding.

Now, a good breeding male should be a fully matured male, a male that is well spurred, that spoils for a fight, that will fight to a finish and if defeated crow his spite against his antagonist, dying.

Such stuff as this makes the right kind of a breeder. He is ever on the alert, watching, guarding, calling the females, and would starve first before he would satisfy his own hunger as long as he could get one of the females to eat the last morsel.

A strong crower, which means good, strong lungs, which in turn means less liable to disease, last on the roost at night and first off it in the morning, comb blood-red and eyes bright, full of the spirit of animal life, clapping his wings incessantly, dancing before the females, spreading his wing and displaying his beauty to the ladies of his harem. This is the strong, physical breeding characteristics of a male fit to perpetuate a race of hardy, healthy stock.

The hackles should be long and flowing and an abundance of them; the saddle feathers and furnishing abundant, and nothing so detract from the appearance of a male as a scanty tail furnishing. Let the tail be well furnished, sicles long and flowing, and with the spread of legs that looks so well and bespeaks the confidence of his own powers to maintain the supremacy over his flock.

Scanty furnishing, knock-kneed, and awkward, ungainly looking males should be avoided. There is a natural grace in a male that should in every way be encouraged.

Scanty tail furnishings is the cause of many a high-tailed bird. He only got a few feathers and they stand up straight; not enough of them to maintain them at the proper angle.

The breeding from immature males is largely to blame for the lack of proper furnishings, as it is still true "that like begets like," and when immature males are used generation after generation no better result can be expected.

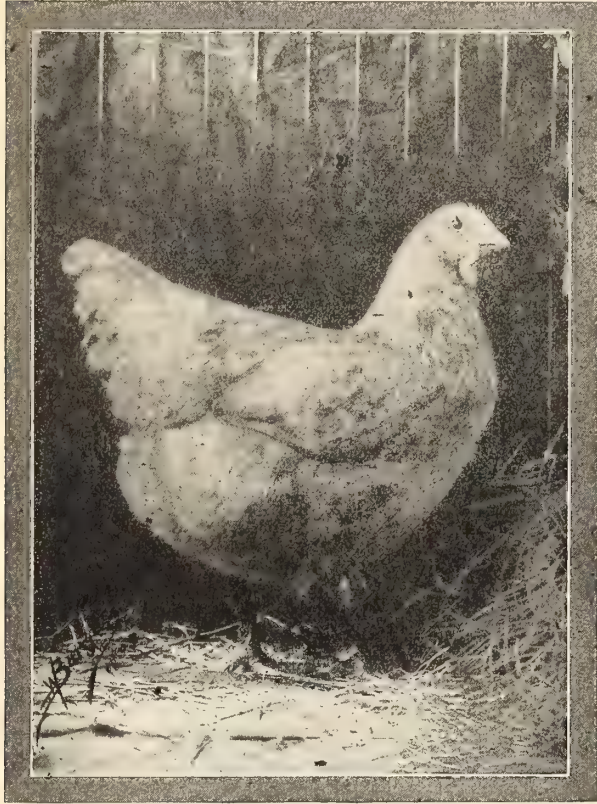

The furnishings of a male is his badge of maturity; they show him to be fitted to breed from and no male bird is as handsome and as fit to breed from as in his second year, and it is about the same with all the different species of the Galinaceous birds.

The females should be selected with the same care regarding their secondary sexual characters, as it is just as bad to use a "cocky" hen in the breeding yard as it is to use a "henny" cock; both of them will be of little use in the perpetuation of their species.

There are many females that show a pronounced tendency in this direction, and as the bird grows older this perverted sexual character grows stronger, until in some rare

cases she will change her plumage into that of the male bird, which has been observed by ourselves as well as by others.

It is, however, not with the rare cases we are dealing now, however interesting the progress of this change from the feminine to the masculine might be, but with the com-

COLDEN ROD.

First prize Buff Plymouth Rock pullet at Kansas City, and winner of color specials. Bred and owned by E. L. Delventhal, Warrenton, Mo.

monly observed masculine tendencies in the inmates of our breeding yards.

Hens that begin as pullets to show signs of developing spurs very rarely make good layers; they will be found slow to come to the laying age, and their eggs will not be very numerous, nor, as a general thing, will they prove very fertile.

She will very often resent any advances made by the male and in her second year, if permitted to live out her existence, this tendency will be still more pronounced.

She is generally the female in the pen that the male takes a dislike to; the one that generally causes a disturbance whenever she has the opportunity, and she very frequently makes the opportunity herself if it is not otherwise to be obtained.

On examination of her internal organs it will be found that her ovaries are small, in many cases rudimentary, and in one sterile hen examined, shrivelled and atrophied.

Now, it can be readily seen from this that it is of the utmost importance to look after the female that in every sense of the word stands out prominently a type of her own sex, and that however good her fancy points may be, a female showing strong tendencies to partake of the male characteristics should be used with a great deal of hesitance, if at all, for it must be admitted that, to encourage the perpetuation of such characters, will in the end prove disastrous to all the hopes of the breeder by becoming their own extinction, which, with one breed, has taken place several times until males with more pronounced male characteristics were introduced to rejuvenate the strain.

In breeding for eggs only, it has a still more important bearing, for the maximum number of eggs can never be obtained by either breeding from females of this type or from males that have been produced by such individuals.

After a great deal of experimenting we have not yet arrived at any conclusion, as far as how much the separation

of the different sexes may or may not induce conditions similar to the ones described.

We have, of course, noticed, as have many other breeders, that when cockerels are separated from the pullets that the cockerels as they grow older will force some of the weaker ones into a state of femininity that sometimes will utterly ruin and demoralize the flock and, if not make them entirely useless, create habits that are very hard to break them of in later life.

It seems an unnatural state of affairs, and though we have again and again advised this separation, of late we are beginning to feel that it may be conducive to the best of results in the breeding of poultry.

With the females in the last stages when the chicken grows into the developed pullet we have seen similar conditions, though not by any means to the same extent as in the males, but it would seem pretty well substantiated that the separating them from the males will induce slow maturity which, if continued in, may lead to late laying.

A comparison of both methods would be necessary to determine accurately what is most desirable for our best good.

ROCK HILL POULTRY FARM.

**They Have Blue Ribbon Poultry and the Ribbons to Show—
One of the Leading Strains That Has Made Good
for Years Under the Watchful Eye
of F. W. Corey.**

Written by H. P. Schwab, Eastern Representative A. P. J., Irondequoit, N. Y.

One of the fiercest storms of years was raging at Ossining, N. Y., as we left the train for an expected visit to Rock Hill Poultry Farm. Mr. Corey was there to meet and guide us, and the storm, as if noting our determination and its inability to quench our interests and desires, gave way long before we reached the farm.

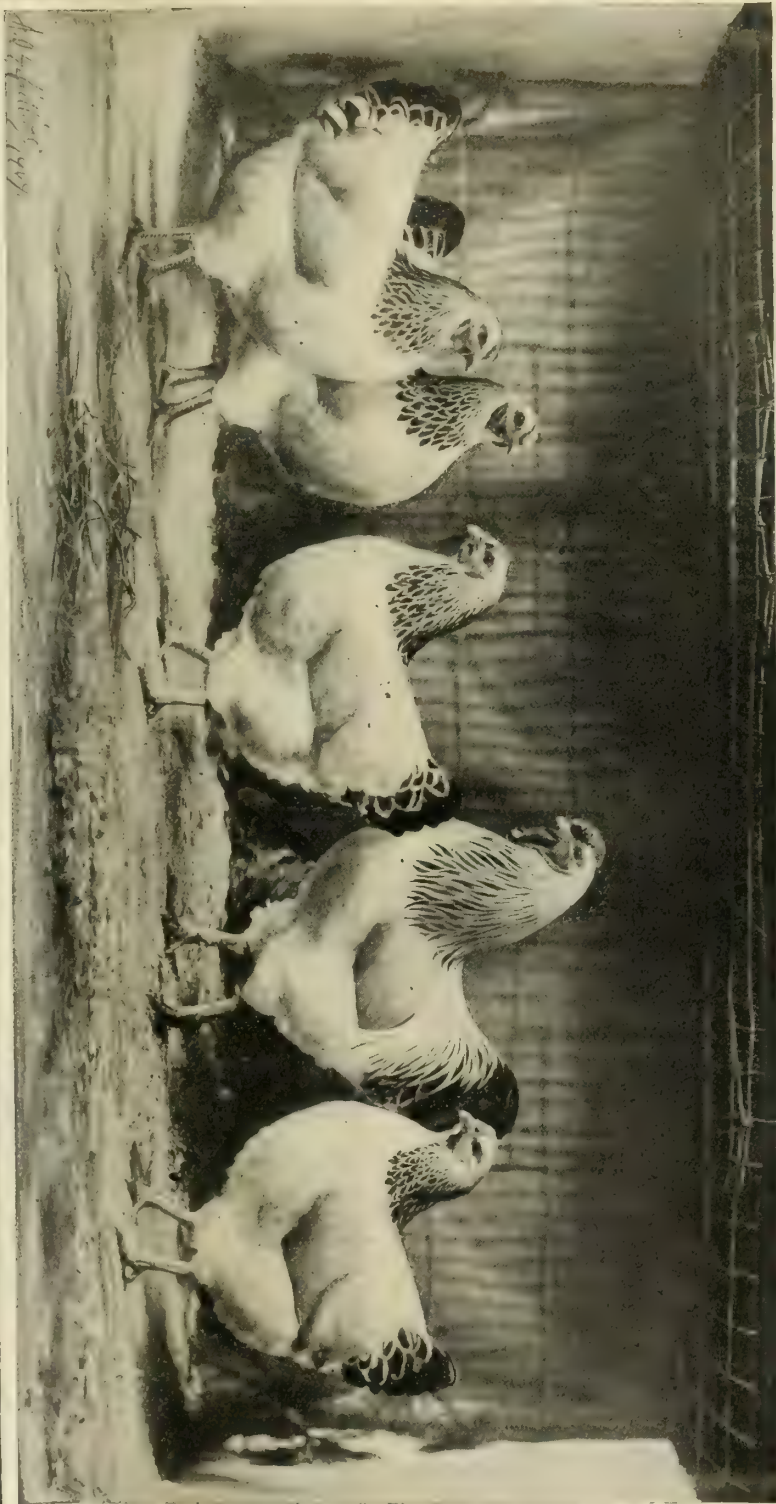

If there ever was a farm properly named, it is this one. A two-mile drive over an ideal country road, up hill and then way down again, only to have to go up and repeat

One of Bennett's famous S. C. Rhode Island Reds. Bred and owned by Quality Hill Poultry Yards, Canton, Ill.

several times again. Here is nature in its ruggedness, serene most beautiful to enjoy. The rocks on the hill and by the roadside are now capped with white, and so are the evergreens that abound on all sides; all is simple, yet most beautiful. All are a part of nature for us to appreciate. From

FIRST PRIZE-PEN COLUMBIAN WYANDOTTES AT MADISON SQ. GARDEN 1908-9.

ROCK HILL POULTRY FARM OSSINING N.Y.
OWNER AND BREEDER

the top of each hill we had splendid views of the majestic Hudson as it calmly went its way to the sea; we could see the city to the left, and below us, to the north, was Croton; over across the river were villages and hamlets that looked so cozy and contented that they seemed as important a

Wouldn't you like to lay your hands on this fine fellow? This is "Ringy," the famous sire of "Prince Ringy," the bird that has produced such a profound sensation. He is a true-blue "Aristocrat," the remarkable strain of Barred Plymouth Rocks that has been originated by W. D. Holterman, Fancier, Fort Wayne, Ind., Box 2. Mr. Holterman has just issued a very fine catalogue, one of the finest on Barred Plymouth Rocks, which is free to our readers. We desire to assure our readers that this catalogue is indeed not only very handsome but highly valuable. Get one today.

part of the nature as they are to the conditions of the day. This is also historic ground here, for in the distance, up the Hudson, we could plainly see the point from which the chain cable was strung across the river in the Revolution to try to prevent the British men-of-war from ascending to attack West Point.

Arriving at the farm, we were ushered into the office and given a copy of their guarantee to their customers to read. In this they tell just what they will do, and they do it. White and Columbia Wyandottes, S. C. White Leghorns and Silver Penciled Plymouth Rocks are bred here.

White Wyandottes.

The Rock Hill White Wyandottes are familiar at the New York show, having won there for some years in succession. If space permitted I would like to fully describe the twenty mated pens seen. There is quality in every one of them worthy of mention. Quality has the call here, and there is no filling in at all. We found from four to eight females to the pen, each carefully selected to properly mate the male. This is the kind of breeding we have advocated for years, and if this style won't bring results none will.

At the late New York show Rock Hill won first cock, third hen, fourth pullet and third and fifth on breeding pens. Considering New York competition, also that White Wyandottes are always either first or second in being the largest as well as strongest class at this show, you will then better understand the value of this record. Type is a feature here to be noticed. Manager Corey is an ideal crank on shape, and well he may be. His efforts in this as well as in other respects merits the success he has attained. We found in pen 58 his first prize 1909 New York cock mated with six select pullets. This grand fellow still shows his best exhibition form, his genuinely beautiful head points. Deep, full, broad breast and just the back we dote on. Note our report of the show in last month's issue, and he is just as splendid today. Pen 49, cock; another New York show winner of

1907; and pen 50, cockerel, a glorious bird just come into his best form. Other pens headed by cocks with a prize record and cockerels bred from his best birds made a strong showing indeed. Each seemed to be in just the right place and the purchaser of eggs can well rest assured of getting honest value here in either \$5, \$10 or \$15 eggs.

Columbian Wyandottes.

Columbian Wyandottes have been bred for four years and results have been highly satisfactory. Starting with but one pen, and knowing their breeding, they have produced a quality that is good to see. Of these we noted six pens mated. Here, also, we found them mated to produce quality; for, as Mr. Corey said, we only want the quality first and quantity later. When we consider this as really being a new variety we have to acknowledge the wonderful progress made. I believe it a rather simple question to breed color or most any combination of colors desired, but know it is different with type. To get the type proper and to come true is just where the Columbian Wyandotte breeders have, with credit, succeeded. Here we found upwards of 200 birds of this variety of exceptional shape, and that is not all. Head points won another feature; the low and well formed combs, equal to any flock of whites we have seen. In both hackle and saddle I thought the males here very good, the markings were prominent, with plenty of contrast and very clean. Tails, also, show up strong and on opening the wings we had to appreciate their worth, also. They are a lot of strong, evenly balanced birds.

At the 1909 New York show they won first cock, third cockerel, first breeding pen and silver cup for best display. Their first cock is not a bit short of a wonder in color and markings, as well as in form. The third cockerel shows up grandly now and promises well both as a breeder and future show bird. While the male, heading their first New York pen, is a neat fellow, his shape and markings are of the kind to create new shape and further possibilities of this bound to be popular variety. The males, heading their other pens, are all birds of character, while the breeding females plainly show they have been selected with the utmost care.

S. C. White Leghorns.

We have here only to refer to Rock Hill's winnings on

One of Bennett's famous Single Comb Rhode Island Reds. Quality Hill Poultry Yards, Canton, Ill.

S. C. White Leghorns at the late Boston show to give the reader a correct idea of the grade bred here—first and second cock; first, second, third and fourth hens; third and fourth cockerel; first, second and fourth pullet, and first and third breeding pens. Specials for best cock and four

hens, best cockerel and four pullets and for best display. This is but a drop in the bucket compared to their winnings of the past few years and we find they won at the Jamestown Exposition second and third cock; first and fifth hen; first, second and fourth cockerel; first, fourth and sixth pullet, and first, second, third and fifth pens. At the New York State Fair every first prize offered; at the Hartford,

respondence and orders. We have known him personally for years as a prominent poultry judge as well as a breeder and have no hesitancy in saying we have every confidence in him. His ability is proven by the success he has made in bringing Rock Hill birds right up among the great winners of the day at America's best and largest shows.

The buildings at Rock Hill are complete and of the practical order. All poultry is well housed, coops are clean, and contentment is plainly seen by the baskets of eggs found in the office. At this time (February 3, 1909) they have 1,200 chicks, from one day to five weeks old, in their brooder house, fertility running over 90 per cent. The chicks are of their several varieties, are strong and looked to be doing extra well. They receive showroom care from the day the shell breaks.

Once more we will refer to their guarantee of all stock and eggs sold. This is a principle here that others should follow, it brings the buyer and seller closer together and bids well for the future of the industry.

PINE TOP POULTRY FARM.

Specialty Breeder of Barred Plymouth Rocks and S. C. White Leghorns—A Line With a Show Record—A Plant Grandly Located and Well Adapted to the Raising of Poultry.

Written by H. P. Schwab, Eastern Representative A. P. J., Irondequoit, N. Y.

If we were to write a nature serial story we would stake our camp at the Pine Top Poultry Farm owned by Mr. John H. Hallock and located at Hartwood, Sullivan county, N. Y. This farm is located about 100 miles east of New York City, in a section that may well be called the Highlands, as it has an elevation of 1,500 feet. There are 130 acres in the farm, mostly in pine and chestnut; it has its rugged peaks,

The above shows the type of White Wyandotte bred by J. W. Andrews, Dighton, Mass.

Conn., show, and at Trenton, N. J., every first prize offered, and so on down the line.

Back of these winnings they have the real goods—type strongly in evidence and size with the best of them. Their matings for this year appear very good to us. Shape and size is sure to be an important factor here, as we were impressed with both these qualities in all their matings. Good, pure white color, with rich, yellow legs, finished them off just as they should be.

Silver Penciled Plymouth Rocks.

We may well call Rock Hill the home of the Silver Penciled Plymouth Rocks. We have seen several flocks of these heretofore, but never such quality or quantity. Winning every first prize offered at the New York show for three consecutive years is a record unapproached and we doubt if it will ever be possible to equal it. This is truly a beauty breed from every viewpoint; they also have a quality that is bound to increase their popularity as time passes and their true worth becomes better known. We found several matings here of the best grade, and white color and markings were a feature; they also have head points that must be considered. To see well set and fine shaped combs the rule is evidence of careful breeding.

Buff Cochon Bantams.

The Bantam building greatly interested us. Here were several pens of Buff Cochon Bantams. Handsome little fellows with grand color and shape of the best. They stand way down low with well feathered legs and toes. These, also, have won their share at the New York and other prominent shows.

Rock Hill issues a handsome catalogue, descriptive of birds, matings, prices, etc.; also special circulars as required. Manager F. W. Corey gives his personal attention to all cor-

Bred and owned by Charles Nixon, Washington, N. J. Pronounced by Theo. Hewes to be the best White Wyandotte ever produced.

its spring lakes and its swift running brooks. The dense forest all around, broken only here and there for a clearing and observation. If you care to hunt, you can go loaded for either squirrel, fox or deer, or you may fish for anything from a lamper-eel to the black bass and wily brook trout. This truly is Paradise found for those who can enjoy

natural scenic beauty, and it was only with the greatest regret we were obliged to refuse an invitation to stay a week or a month. We hope some day to accept this.

Connecting with the Pine Top Farm, the Hartwood Club (of which Mr. Hallock is a member) owns over 12,000 acres of land, kept and devoted to the pleasures of its members. The forest and lakes are both stocked and receive every

One of "Lamon's" northern raised White Plymouth Rock males. Note the low comb, long back, and low-carried, well-spread tail. Here are type and quality combined. One of the best White Rock males in the world today. Owned by Harry M. Lamon, Watertown, N. Y.

care. The members own their own cottages, and deep in the woods also have their own hotel.

The Buildings and the Poultry.

In a clearing of about 30 acres Mr. Hallock has built a poultry plant that is second to none in the country. The buildings, in both style and make, are practical. There are two brooder houses, one 20x40 and the other 15x100 feet. One breeding house 12x252 feet and two other breeding houses each 12x180 feet. Then there is the incubator cellar, the office, the feed house, equipped with a 16-horsepower engine and machinery for cutting and grinding feed and machinery for other purposes. The cockerel house is 20x100 feet, is built and furnished in the best possible manner, and last but not least, the setting house, 20x50 feet. Nothing is lacking here; every detail is well looked to, and while we can well see here the hand of the master, we can also see that in Manager Winchell Mr. Hallock has a caretaker after his own ideas, one who has his interests fully at heart.

Out on the range we found 40 colony houses, each about 6x8 feet, placed 150 feet apart each way. Here the young are brought from the brooders and hens and are safely housed, with unlimited range over partly cleared land; their every desire is fully met here, and we can easily understand where the size and vigor of Pine Top birds is attained. Another line of twenty coops that are about 5x5 feet, each with a 60-foot wired runway that is about 10 feet wide, interested us. Here the breeding males are put after the breeding season. This is one of the best arrangements we have seen, for here the male can readily have every care, and in particular during the moulting season can have the extras due him.

At this time (February 9) they have about 1,000 chicks growing nicely, and some of these will shortly go to the colony houses. Green food is a daily ration, grown in the room of the office building. They have boxes about 4 inches deep by 2 feet wide and 5 feet long. In these oats that have been soaked for twenty-four hours are put 2 inches deep and left to sprout. They start in a few days and a top cover cloth is then put over to rush and green them. This is a grand idea and one more should follow. Then there is the horse and cow barn, with eight fine Jerseys and four horses, the garage with its automobiles, and three living

houses for the men and their families, with every convenience; contentment is supreme.

When we consider that here are bred what are probably the two most popular varieties of standard-bred poultry, also the record Pine Tops have made at the largest and best shows, we must then admit there is something here besides elegant buildings. They have the quality in stock as well. After handling birds in nearly every pen and carefully noting every bird on the place, I wish to go on record as saying that I have never seen a better kept place, nor a more uniformly high-grade class of stock at any place where two breeds are kept than they have right here at Pine Top, with from 600 to 700 breeders on hand; there is not a bird on the place even out of condition.

Their Late Show Record.

You have to have the goods nowadays to win at the shows with any of the leading varieties, and in particular on Barred Plymouth Rocks. Pine Top has been showing for years and at the 1909 Philadelphia show won grandly with an extra quality line of birds. On Barred Rocks, second cock, first hen, third and fifth cockerel, second and fifth pullet, first breeding pen, special for best male in the show, two silver cups and nine other specials. On S. C. White Leghorns, first cock, first and second hen, first and fifth cockerel, first pullet and first pen, and every special offer, including two silver cups—one was for best Leghorn, all varieties competing. These awards speak for themselves and further remarks are unnecessary at this time, as my report of the Philadelphia show was in the March number. At Chicago, Ill., January, 1908, they won on Barred Rocks, fifth cock, second hen, first pullet and second pen, in what was one of the strongest classes of birds I have ever seen in the west. At the same show on S. C. White Leghorns, first and third cock, first and second hen, third and fourth cockerel, first and second pullet and first pen, which proved to be as near a sweep as has ever been made at this, the great show of the west. At the 1909 New York show they were awarded fifth cock, fifth pullet and fifth pen; at the 1908 show, second and fourth cock, second, fourth and fifth

hen (on three entries), fourth pullet, fourth cockerel and sixth pen.

At the Jamestown Exposition they won first and fourth prizes on Barred Plymouth Rock breeding pens, and on Leghorns, fifth cock, fifth cockerel, third hen, second pullet and fourth pen. Besides these they have a strong record at

The above Single Comb Rhode Island Red males have been very prominent in the leading shows of the East, winning, among others, the coveted prizes as listed above. Being actual photographs, they show the desired type in winners. These birds, together with about twenty-five others of similar type and color, heading Judge De Graff's breeding yards for 1909, are pronounced by Judge A. C. Chapin, of Springfield, Mass., the finest class of Red males he has ever seen together, even surpassing New York or Boston shows.

former Madison Square Garden shows, at the New York state fair, at the Auburn, N. Y., A. P. A. show and others, giving to them a place that deserves consideration.

The Barred Plymouth Rocks.

For 1909 they will have fifteen pens mated, about half each for cockerel and pullet breeding. Their cockerel line this year is very strong. One pen headed by the first pen

male at Philadelphia greatly pleased us; this fellow is of a beautiful type and shade of color that is just right; his mates have been carefully selected, and I know of no reason why some extra fine exhibition birds should not be expected here. The third Philadelphia cockerel heads another choice pen of females. He is better today than when at the show, being very narrow barred, with an exceptionally fine head, qualifying him for due consideration. The second Philadelphia cock is now in prime show condition and is lording it over a pen of females well mated, with producing record to back them up. Other pens are headed by males with a show record, and some have never been shown. These are all birds of merit; they have the quality that is bound to tell, coming, as they do, from superior breeders and show birds. All the females average up very well. Type has been carefully considered here in every one of them, and in particular I was pleased to note that the shape and proper length of back here is worked for. In the cockerel bred females the combs are closely looked to, and the ones with clean cut and strong serrations are given preference. We noted the results attained in the males as well as in the females. It pays to look after all details.

Their pullet breeding line is equally strong. We found here eight pens mated and one or two more will probably be added. Several of these males, while very strong in type, combined with it a color and style of bar not always found in this kind of breeder. For years they have had their females well placed, and for years more you will hear from them. They hold the right principles here and closely follow them in both the males and females. We again here handled several of their winners, including the first hen and the pen and single class winning pullets at Philadelphia, also the Chicago winners of 1908. They all have a sound quality that carries them along;

S. C. White Leghorns.

There are eight mated pens of these here at this time, each headed by a winning male. Every one of these deserves a special description that at this time space prevents us from giving as we would like to. While we noted several

valuable characteristics in these Leghorns, none impressed us as greatly as did their size. This quality so eagerly sought for and of so great value deserves this special mention. This line with their grand size, carries the true Leghorn type; combine these, they leave no room for doubt as to their value as show birds and their ability to give practical and profitable results.

Condition again was evident here. We handled all the males and several females, and found them white. Head points on both males and females were a feature, as was the shape of backs and the carriage of tail. With good size in the Leghorn we get those beautiful and moderate long backs so much desired by all. It is the Leghorn of today and of the future. For it is the one that will further endear them to the breeders for fancy as well as for a leading practical fowl.

With their chalk-white plumage I may well mention their rich red eyes. I did not see a poor-eyed Leghorn on the place. The pure yellow legs were also conspicuous. In fact, I was greatly pleased with the quality seen here in both varieties, as well as in the way they are kept.

Mr. Hallock fully satisfies his desires by also breeding a few buff, black, and white Cochins Bantams, Silkies, and some varieties of pheasants. I presume these are just for his own and the children's amusement. Be that as it may, they are nice and very attractive. Fox Terrier dogs and English setters are also bred here. We made friends with one of the setters and chummed with him; he is a noble dog and knows his value is way up in the three figures or more.

Mr. Hallock has been a fancier all his life and a breeder for a great many years. Our personal long acquaintance with him has only brought the desire to interest more like him. He is a fancier by nature, and I have long known that his greatest desires are to aid the fancy. He has freely given his money and advice, when they would benefit, and I am pleased to report here that his poultry interests, which he himself has placed on so high a plane, have met with a success that warrants us in again saying that there is money in both fair dealing and in poultry.

Mr. E. E. Winchell, the manager, we have also known for some years. We have seen his success and must at least

Hen shown in pen at Madison Square Garden. Considered by many the best White Rock hen ever bred. Greystone Poultry Farm. F. H. Davey, Mgr., Yonkers, N. Y.

take personal pride in his work. He is a very precise and careful breeder, with a cranium chuck full of poultry knowledge gained by long experience. A neat mating list describing their matings and giving particulars of their utility stock and matings, with other information, is to be had for the asking.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Frederick W. Babcock, New Haven, Conn., and the second prize to Lida Martin, Ripley, Ohio.

PROFITABLE DUCK CULTURE.

In no branch of the poultry industry has the advance been more rapid, or the results more satisfactory and remunerative, than in that portion devoted to duck breeding. The writer well remembers, in the arrangement of the different

feeding has been worth all it has cost, and the fancier who will thoroughly learn and practice the many marked and varied points of difference between the necessary treatment, housing and feeding of our gallinaceous and aquatic friends cannot fail to ever find his yearly balance on the right side of the ledger; but there is a great deal to learn, and the fancier who has made, in other branches, a record in glory and ducats may sink it all in duck culture unless he pursues an entirely different system as to feeding, housing and management in general. During the past forty years the writer has bred with pleasure and profit the various varieties of ducks, and has of course learned by experience a few points which may prove of value to the amateur.

Many otherwise favorably situated are deterred from engaging in duck raising, either in a large or small way, from the mistaken and hitherto widely prevalent idea that a large body of water is an absolute essential to success, when nothing is so erroneous. While grown waterfowl all enjoy a pond or stream to swim or bathe in, yet they do just as well without it, and a thorough wetting of young ducks, until their pin feathers are well grown will kill the majority, and leave the balance a poor, stunted, humped-up lot of birds. A sudden shower or thunder storm may undo the work of an entire season. A rigid regard to this rule is a prime essential to success.

Duck houses should be built largely with a view to dry-

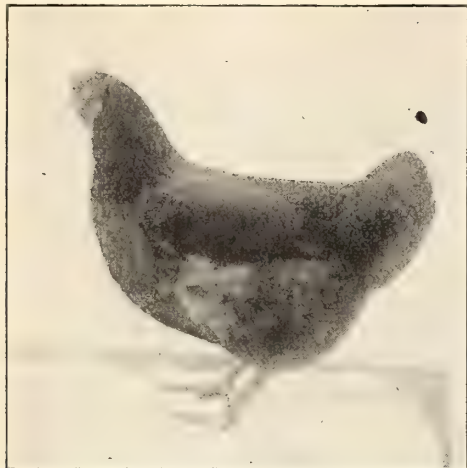

Partial view of the Mapleside Poultry Yards, looking north. Charles Nixon, proprietor, Washington, N. J.

classes in the old time poultry shows, how the prospective exhibition of ducks, or other water fowl, being assured in advance, by past experience of the scant courtesy that would be assured his favorites in the exhibition hall, shipped them in some cramped, heavy, not to say dark, dry goods box, and upon reaching the show they were promptly shoved by the management under a convenient table, near the door, or in some storeroom, and well nigh forgotten in the judging, and only seen when some duck enthusiast drew their box into view. In those days the fancier or farmer exhibitor kept only a few ducks, either Rouens, "Top Knots" or "Scovies," as he termed the last two varieties, not with any idea of profit, but merely "to have a few of them around." They were allowed to run with the other poultry and roost in the hen house, in violation of all sanitary laws, and the receipt of a few eggs in February, and occasionally a roast, was all that was expected of them. That a duck, of any of the standard varieties, can be made to lay any time in the year and to produce 140 to 150 eggs per annum was something not "even dreamed of in your philosophy, Horatio," at that time. Now all is changed, and the waterfowl classes vie in popularity and position at our modern poultry shows with the best in the hall, and large and exclusive duck plants are springing up on every hand, a market for ducks in all stages of growth has been assured, and a market never yet overstocked. This change for the better has been gradual, and the painstaking results of the patient labors of the breeders of our webfooted friends, but the experience thus gained as to their management and

ness and warmth, as these points constitute the main essentials for success. My own pens are built to face the south, are 14 feet long, stand 42 inches high in front, 40 inches in the rear, and are 36 inches deep. Each pen is divided in two halves of 7x3 feet, with sliding door in the center, the east part being provided with a movable floor, which is always kept clean, and well littered with cut straw, or fine shavings. In feeding ducks, young or old, variety should be aimed at, as they soon tire of the same diet, and their appetites must constantly be catered to or they will rapidly run down in flesh. In feeding young ducks the first week I mix equal parts of the yolk of a hard boiled egg, rolled oats, bread crumbs and a small portion of sharp sand. I feed this mixture four times daily. After the first week I omit the egg, substituting wheat bran and corn meal, a very little beef scrap, soaked, giving lettuce or cabbage for green food, which must be supplied in some shape from the start. This diet continued for from ten to thirteen weeks will make ducklings ready for market, but at all stages of growth they must be fed all they will eat. For old or laying ducks, my favorite morning feed is meal and bran, beef scraps and steamed cut clover, thoroughly mixed with boiled vegetables of any kind, and fed warm. At night a ration of grain, but at no other time, as soft feed is an essential as a rule, if eggs are desired. Always keep them supplied with oyster shell and grit, and green food of some kind winter and summer.

A duck can be raised to a marketable size at a cost not to exceed ten cents per pound, and my own prices for full

dressed ducks, at any time, ranges from 30 to 35 cents per pound, and has done so for the past forty years that I have bred them. Ducks' eggs find a ready sale at from 5 to 10 cents per dozen higher than hen eggs. At these figures it is plain to see that ducks are certainly to be classed among

SINGLE COMB RHODE ISLAND RED PULLET.

First pullet at Detroit, 1909, in competition with S. C. R. I. Red Club. This is undoubtedly one of the best pullets in this part of the country. Bred and owned by William H. Klug, 895 Seyburn Ave., Detroit, Mich.

our most profitable poultry, at least that has been my experience. Frederick W. Babcock.
New Haven, Conn.

FEEDING THE CHICKS.

The time of year is at hand when the poultry business is most fascinating and well it is that there are some fascinations about it, else with the extra amount of work required it would become drudgery indeed. Who can fail to be interested in the soft, downy little creatures that put in their appearance in the springtime and take so much of our time and attention? A neighbor girl said to me last summer: "Mamma loses so many of her little chickens; they die with bowel trouble; they always do." I said:

SINGLE COMB WHITE LEGHORN.

First cock Illinois State Show, Springfield, January, 1909. Owned by Robert D. Farmer, Knoxville, Ill.

"Does she feed them as soon as they are hatched?" She replied: "Yes, indeed, we never let them get hungry." It seems strange with so much written on this subject nowadays in the various farm papers and poultry journals that

anyone should fail to wait at least twenty-four hours. But they had never heard of waiting, and thought of course the baby chicks must be hungry. The yolk of the egg is taken in during the last stage of incubation and serves as food for at least twenty-four hours. A good many consider it advisable to wait forty-eight hours. They should be given sand or fine grit to pick at from the start. In other words, let them swallow their teeth first, that they may be ready to grind the food when it comes. Bread soaked in milk and squeezed dry makes a good first food. Most people use hard boiled egg, chopped fine, for a starter. This is as good as can be had, but is most too expensive to continue for any length of time. The fine chick feed which may be bought on the market makes an excellent scratching food and may be used from the first. Fed in chaff or other fine litter, it induces them to work. This helps to keep them warm, and develops the muscles. As with the human family, happiness is necessary to health, and keeping busy is necessary to happiness. Heap your chaff up into a little mountain, throw a handful of feed on top and watch your mountain disappear. Note also how happy they are while at work.

FIRST PRIZE S. C. R. I. RED COCK, MADISON SQ. GARDEN N. Y. 1908-9.
Bred Owned & Exhibited By
ELLENWOOD POULTRY FARM HATBORO PA.
Geo. W. TRACEY Mgr.

This cock also won the proud title of champion Rhode Island Red male in the show, Rose and Single Comb, having won President Seeman's cup, awarded by three exhibitors selected by Secretary Crawford.

After a few days cornbread may be used. It will crumble better if it stands a few hours before using. Don't let it stand long enough to become mouldy. When a couple of weeks old, cracked corn and whole wheat may be used. Ground oats is a good developing food. Give variety. Tempt their appetites by a change. We ourselves may be fond of baked beans, but we don't want baked beans three times every day. Use milk curds for variety. A mash of shorts and corn meal mixed with milk helps the growth. Never feed a sloppy mash. Have it so nearly dry that it is crumbly. Sloppy food causes bowel trouble and there is nothing harder to combat. Keep grit before them all the time; also clean water. Milk is good provided it is kept sweet and clean. Bran helps to prevent bowel trouble. I used to feed it in a dish, until one choked to death. Then I spread it on a clean board so they couldn't take such large mouthfuls. Pulverized charcoal is also good to prevent disease. Never give enough food to have any left over. Better not quite satisfy their appetites. However, don't let them go to bed hungry. Food left lying around becomes sour and should not be used. It may also attract rats to the yards. The crops should be empty in the morning. If not, there is something wrong. Look after the grit supply. Feed often; five times a day isn't too often. One year

I began by feeding five times, and after a few days I fed only three times. Another year I fed four times and kept it up—at five or six, ten, two, and six or seven. With this latter method the chicks reached the two-pound stage two weeks earlier. Of course other things affect the growth, but in my experience I believe it was entirely due to the number of times they were fed.

CHICKEN LIFE AND WHAT PERTAINS TO IT.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Me.

Th' appointed time
With pious toil fulfill'd, the callow young,
Warmed and expanded into perfect life,
Their little bondage break, and come to light,
A helpless family, demanding food
With constant clamor.

—Thompson (Spring, line 666).

Hatching Out.

From the beginning of this world spring was always synonymous with life, and in both prose and poetry it has been heralded as the best of all seasons of the year, and it seems to us that the sky is bluer and the future looks brighter and the whole realm of nature full of promise of things to come, for at such times when the day is soft and mellow dreams come easily, and whatever may be said about "idly dreaming" most of our life is made out of dreams, some of which are and some of which are not realized.

worth keeping when the culling took place in the fall of the year.

A good brood hen "is a joy forever," or at least as long as she lives, and ought to be carefully treasured for this purpose. There are hens and hens, you know that; there is the hen that you can handle and take from the nest and she seems to know that you are her friend and not her enemy, and then there is the other kind—she begins to stand up on the eggs when she sees you coming, and before you get near enough to the nest to get your hands on her she flies into your face with a yell of terror and makes a commotion such as sets the whole plantation screaming from one end to the other, and every other sitting hen is now on the watch for some terrible happenings, while their curmudgeon is yelling out her heart's desire.

Now the first mentioned hen is the kind that makes a desirable brood-hen and will watch over her flock, carefully lead them around, let you handle them and her and clean out the premises and full well knows that you will not hurt either her or her little ones.

The other hen should never be used as a hatcher or brood-hen, as in either capacity she will be very undesirable and more than likely ruin the eggs before they are hatched, and if she should manage to hatch them kill many of the chicks before she is ready to shake them off, or if she does manage to see them through she will make every one of her brood exactly like her own self, wild and unmanageable, which is very much to be depreciated in fancy poultry, as one of the chief pleasures in this occupation is to have your birds tame and easily managed and ready to be handled at all times when this becomes necessary.

A few good docile and motherly brood-hens are an accessory

QUALITY HILL POULTRY YARDS.

Partial view, showing F. A. and William Z. Bennett's residences.

The winter has its beauties and its charms, but it is white and cold and most of us love warmth, and the spring is full of this, even in its worst moods, and this love of warmth makes our heart glad at the return of spring, and how amazing is the change in the face of nature, when the earth from being bound with frost, or covered with snow, begins to put forth her plants and flowers, to be clothed with green, diversified with ten thousand various dyes, and to exhale such fresh and charming odors, as fill every living creature with delight!

It is at this time of the year that the poultry fancier is putting to the test how correct his judgment was in the making up of his breeding pens, and as he gathers the eggs which now come in plenty it seems to him that each one of them contains a future prize-winner and it is with regret he parts with these eggs as he has booked earlier in the season, for he is not sure whether he has not like Esau "sold his birthright for a mess of pottage."

Preparations have been going on for several weeks and everything is ready for coming events, the coops are clean and sanitary and ready to be occupied by the little newcomers, and warm sunny places have been carefully selected in which to place the coops that they may be sheltered from any unfriendly blast of the breath of winter which seems always reluctant to leave us too early, particularly here in New England with our 136 different kinds of weather which furnished Mark Twain with one of his most delightful themes.

And it is well to make preparations for every contingency, for it is too late to make preparations after the chicks are hatched; they should have been carefully made long before.

If a hen is to be used in the hatching out of the eggs, and where only a few chicks are desired it is always best to depend on the hen, she ought to be picked out from the flock as one

to every establishment where fancy poultry is raised that is not to be despised. It is common at this time, when sitters are in demand, to purchase them wherever they can be gotten and of any sort of breed and variety, and except the greatest care is taken this may be fruitful of much future trouble in the rearing of the young and their future excellence.

Roupy birds have at this time of the year been introduced with this dreadful disease lingering in their systems, and though no visible sign of it the germs are still present and ready to do damage to the flock into which they are introduced.

Now in most every case it can be detected by a rather unpleasant performance, namely, open the bill of the bird, and by getting a smell of her breath if any trouble the foul odor will be there to a more or less extent. We firmly believe that this seldom leaves them completely.

Scaly feet is also very common in this class of stock gathered from everywhere, and a scaly-legged hen should never be used as a sitter or a brood-hen, for she will invariably give this foul trouble to the whole brood, for it is easily transmissible, as the scale-mite will leave the feet of the mother hen for those of the growing chickens, and we have seen chickens a few months old infected with this disease and communicated to them by the mother hen.

It is useless to try to cure this disease at this time, for if the commonly used remedies such as ointment of one kind or another is used it will simply ruin the eggs for hatching by the hen smearing them with it, and though I know of a case where a person dipped the legs in common kerosene before sitting her, I should hope that such a specimen of the breed of "know little or nothing" is rather rare.

Refuse absolutely to use a hen for a sitter that shows any sign of scaly feet, for where the scales are even slightly rising

from the leg the parasite is there and she will communicate it to the chickens.

Select a hen for a sitter that is in good flesh, bright, active, red-combed and healthy and with a good strong appetite.

Never use a hen for a sitter that is loose in the bowels. She will foul all the eggs before or later and cause you loss; also

Second prize cock at Detroit State Show, January, 1908. Bred and owned by Lyman H. Hill, Jackson, Mich.

be sure that she is cleanly and comes off the nest regularly to perform her necessary functions, dust and eat.

There are hens that are naturally filthy. They will dirty the eggs without any reason for so doing. Such a hen should be discarded as soon as this bad habit is discovered, for it is no

Second prize White Plymouth Rock pullet, at Toledo, Ohio, January, 1908. Bred and owned by Lyman H. Hill, Jackson, Mich.

use to fuss with her, she will as a general thing continue to soil the nest, which will very much impair if not ruin entirely the whole clutch of eggs as far as their hatching strength is concerned.

A week before placing eggs under the hen dust her well with a good insect powder and do this several times so that as far

as it is possible to make her she is free from lice, which, when plenty, will make her an unsteady sitter and sometimes make her desert her nest entirely.

Place the nest in some secluded place where she will not be molested either by other poultry, rats, or other marauders, and let her finish her hatch.

A word or two about the making of the nest will not be out of place here, and so let me say that the nest should be roomy and made in such a way that she can move the eggs around the nest without breaking them.

Place some moist dirt in the bottom and keep it moist all during the progress of the hatch. When hen is off nest, pour a little warm water down the bottom of nest and this will keep the moisture question from troubling you.

Make the nest shallow as a saucer, then place the eggs in the nest and let the hen attend to the business.

At the time of hatching stay away from the nest; don't go near her and don't trouble her by putting your hand under her.

ROYAL BLUE.

Winner of first prize, color special and grand sweepstakes special prize medal for the best cockerel in the entire exhibition at Madison Square Garden, New York, 1909. Bred and owned by A. C. Hawkins, Lancaster, Mass.

It will take 21 days to hatch the eggs from our ordinary varieties of poultry, and when you see a lot of little heads on the morning of the 22d day then it is time for you to attend to their further comfort, but till then let them severely alone. The hen knows her business; at least I think she does.

If an incubator is to be used, select it with the same care as you would a hen.

Incubators are as freaky as hens, and will cut up all sorts of capers at all sorts of times if you are not careful in your selection.

The best incubator in the market is none too good, and select a machine that is good and healthy same as I have advised about the hen.

See that it don't suffer from bad lungs; its breathing capacity must be all right or it cannot properly care for the chicks inside of the eggs. Ventilation is the lungs of the incubator, and if constructed right will act right. Anyway, try this experiment. Close up all ventilators, and then put a piece of burning paper into the machine, enough to fill it with smoke;

now open all ventilators and notice how quick the smoke is carried out of the machine, and if it is soon dispersed the ventilation is good, though this does not by any means say that it is correct in its working principle. This must be trusted to the makers of it, and for this reason never buy a cheap machine.

If it has been used a past season then more than likely the machine is not really in a good healthy condition, and so to make it so it should be well fumigated with a creolin solution, a ten per cent hot solution that is one part of creolin and nine parts of water. Wash the egg chamber with this solution, trays, regulator, everything inside of the machine, till it stands in floods on the floor of the nursery, and then light the lamp and heat her up and run her till dry and it will be sweet, wholesome and clean, and a better hatcher.

When placing the eggs in it do the same—spray machine and then put eggs in. You will find that eggs will be wet all over in a few minutes, but there will be no harm, and this will fumigate the eggs, kill any germs that might be on the outside of the shell and much increase the chance of raising the chicks hatched.

This process has for the past few seasons almost increased

if reduced to twenty-five in each brooder there will be less loss, if any, and much better chicks.

This is why I have come to believe in the small sized brooder, and if I could get a dozen well made small brooders that would take care of twenty-five chickens each I would order them in a minute, as they would be just what I am in need of.

Fourth prize White Plymouth Rock hen, Boston, 1909. Bred and owned by Lyman H. Hill, Jackson, Mich.

Most brooders are too heavy to handle, and as a general thing too many chicks put into them. A hundred chicks in a flock will crowd and thin themselves out until the half of them is a dead loss, when if in the beginning they had been properly placed the loss would have been reduced to a minimum.

The hen should also be used according to her capacity; a small brood early in the season, not over a dozen, and later in the season it may be increased to fifteen, but never more. I do not say that she might not raise them, but I do say that they will not grow into as fine stock if crowded under the hen, or in the brooder, or finally in the colony coop, where sometimes a number of weaned chickens are placed together for what would seem their own destruction.

Won at the Northern Illinois Show, one of the oldest and best conducted shows in the state. Best cock, cockerel, hen and pullet, in the show, all varieties competing; highest scoring female in the show of any variety; highest scoring male in the show of any variety; 1908, best cock, cockerel, hen and pullet, in the show for three straight years. "This means quality." John C. Plane, Belvidere, Ill.

the livability of the chicks to a 100 per cent after they were well hatched and strong, lively chicks.

Place incubators, if possible, like the hen where it will not be disturbed, and where the outside temperature will not vary too much either during the day or the night. The best place is in a cellar, and the next best place to be chosen is an empty room where the temperature does not rise too much in the day or fall too low at night, but here also the make of the incubator has much to do with keeping the temperature, for though it is true that the best incubator will not do its best except when subjected to the best conditions, it will do a great deal better in poor situations than a poorly made and poorly constructed incubator will, for though this last one may hatch some chicks under proper conditions it will hatch none at all if subjected to conditions that are not exactly favorable.

It is poor economy to save a dollar or two in the purchase of chick machinery and lose a good many more in poor hatches and brooders.

When the chickens are hatched they should not be crowded. We most firmly believe that both under hens and in brooders a few chicks will do the best and grow into finer and stronger and healthier specimens.

No brooder was ever made that would properly care for more chicks than a bunch of fifty and this only for a few days; then

Lack of room is the frequent cause of this, and it would be much better to raise fewer chicks and raise most of them than to raise a great many and lose the half of them and impair the vitality of the other half. "What fools these mortals be," is

still true, and we are sorry to confess that every now and again in spite of all our experience we find ourselves among them.

Another thing that I want to say in connection with the raising of little chickens and young weaned stock that is of the utmost importance is this, they must have dry quarters and

A scene at the home of H. C. Franklin, Townshend, Vt., breeder of Rose Comb Brown Leghorns.

sunny, though well sheltered runs, and on as high, dry ground as possible.

Chicks will not thrive in damp and wet and ill ventilated coops, and it is worse than useless to try to succeed with them under such unfavorable conditions.

Make the brood coop roomy, have the floor perfectly dry and well littered with chaff or barn sweepings from the hay mow, keep the little ones in on rainy days and give them a small run on sunny days, give them fine grain to scratch for, good clean water, fine grit and some fine beef scraps, a little moist food every day, moist, not wet, and they will grow into happy and steady fowls with very little more care.

DISEASES AND THEIR CURE.

When a disease has become firmly established the hatchet is about the only sure cure, but if taken in time most of them may be cured.

It is always best to remove the well from the affected birds and thoroughly disinfect the premises in case of infectious diseases.

Style of poultry house used by H. C. Franklin, Townshend, Vt., breeder of Rose Comb Brown Leghorns.

Apoplexy.—This is a disease of the brain caused by the rupture of one of the blood vessels. The bird is attacked suddenly and falls down dead or nearly so. It is usually caused by too high feeding, but it may also be due

to some other cause, such as sudden fright, violent exercise or straining when laying.

There is usually no previous warning and so, in many cases, treatment is impossible, as the bird usually dies immediately. When, however, the bird is still alive, pierce a vein under side of the wing and bleed freely. This will reduce the pressure on the brain and often result in a cure. The bird should then be kept on a limited diet for some time, in order to reduce the surplus fat. As a preventive, regulate the diet and give plenty of exercise.

Bronchitis.—Bronchitis is a cold accompanied by a rattle in the throat and a cough, and may be caused by exposure to dampness, cold temperature, or by drafts of air. In a majority of cases removal of the cause will result in cure if given good care afterwards. Inhalation of steam or vapor from boiling water has proved beneficial. Give a teaspoonful of equal parts of cider, vinegar and water.

Catarrh.—Catarrh is a form of cold that is quite common among fowls and may be caused by dampness, drafts of air or exposure to cold. It is indicated by a watery discharge from the nostrils, which later becomes more viscid.

To remove the cause keep the fowls fairly warm and give them plenty of easily digested food. Inject kerosene in the nostrils. This may be done with a small syringe, a medi-

"TRILBY."

First R. C. R. I. Red pullet and color special at Indianapolis. Bred and owned by C. L. Buschmann, Indianapolis, Ind.

cine dropper or a small oil can. If catarrh has become confirmed, cleanse the throat and nostrils with hydrogen peroxide and water, equal parts, several times a day and the nostrils greased with vaseline.

Diphtheria.—The symptoms are the appearance of a diseased growth in the throat and inside of the mouth resembling raised patches of whitish or pale-yellowish skin, which may cover the entire throat and mouth and often, also, appearing like ulcers or sores on the face, comb and about the eyes. Make a swab of cotton tied on the end of a stick and swab out the mouth with hydrogen peroxide. Remove any of the growths that come away easily. This disease is very contagious and birds suffering from it should be removed and the premises disinfected.

Bumble Foot.—This is caused by bruises on the bottom of the foot and is often produced by birds being compelled to fly from high perches and alighting on hard and uneven floors. Remove the cause by lowering the perches. If the foot is swollen and filled with pus it should be lanced and the pus allowed to escape. The wound should be washed

out with 2 per cent carbolic acid solution, greased with vaseline and wrapped in a piece of cloth to keep out dirt.

Roup.—The first symptoms are the same as in simple catarrh, but as the disease advances there is often a swelling of the sides of the head, and the nostrils become closed with thick mucus, causing the bird to breathe through the mouth. If the swelling contains pus the swelling should be opened, the pus removed and the wound treated with a mild antiseptic such as a 2 per cent solution of carbolic acid.

Remove the bird to warm, sunny quarters and once each day bathe the swelling with sweet oil and kerosene and give one-half teaspoon camphorated oil.

Cholera.—This is a contagious disease caused by bacteria, and is usually brought on by the introduction of infected birds or by water or feed contaminated by the excrement of sick birds.

The symptoms include great thirst and the voiding of feces of which the part normally white is yellow. Diarrhea is generally a prominent symptom, the droppings being thin and voided frequently and in the later stages the yellow may turn to green. The fowls become depressed, the feathers become ruffled, the comb becomes very dark and the bird

Here is a recipe said to be a sure cure for cholera: Isolate those affected and give each a pellet about the size of a grain of corn or a pea three times a day, made from the following powder (use a little flour and water to make the pellets):

First prize Light Brahma pullet at the late Kansas City show. Bred and owned by Kiney I. Miller, Lancaster, Mo.

- 2 ounces capsicum.
- 2 ounces pulverized asafetida.
- 4 ounces carbonate of iron.
- 1 ounce pulverized rhubarb.
- 6 ounces Spanish brown.
- 2 ounces sulphur.

As a preventive add a tablespoon of the above powder to the soft feed for every ten or twelve fowls once each week.

AMERICAN BEAUTY.

Second White Plymouth Rock Hen, Indianapolis, February, 1909. Bred and owned by P. B. Condit, Indianapolis, Ind.

has a poor appetite. Sometimes the disease runs rapidly through a flock, destroying the greater part of the birds in a week or it may assume a more chronic form, extending slowly and remaining on the premises for several weeks or months. Fowls affected usually die within thirty-six hours. In most cases of cholera medical treatment has proven unsatisfactory. The best methods of combating this disease is to carry out strict sanitary precautions as regards cleanliness and disinfection and to totally destroy the carcasses of dead birds. Droppings should be burned or thoroughly disinfected by mixing with 10 per cent solution carbolic acid. Disinfect the building by spraying with 5 per cent carbolic acid and then whitewash.

Scaly Leg.—This is generally caused by fowls sleeping in filthy quarters. It is also a small parasite which works underneath the scales of the leg. If the legs of each fowl were annointed once each month with equal parts of sweet oil, kerosene and alcohol they would never have scaly leg.

A good remedy is lard and kerosene, equal parts; add enough pulverized sulphur to make a paste, then apply it to the legs and bandage them, leaving it on one week, and if at the time the scales are not off, repeat the application, as it is a sure cure.

MOTTLED ANCONA.

Typical Egg Machine as bred by Willard J. Thorniley, R. D. 1, Marietta, Ohio.

I have not named all of the diseases to which poultry are subject, but I have told of the principal ones.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

American Poultry Association Annual Election, 1909— Nominations

Statement showing the five candidates for each office receiving the highest number of votes, and the number of votes cast for each nominee for all offices of the association:

For President: C. M. Bryant received 384 votes; W. Ellison, 6; Grant M. Curtis, 5; Thomas F. Rigg, 5; H. B. Donovan, 4.

For First Vice-President: H. B. Donovan received 177 votes; L. A. Baldwin, 63; George E. Conkey, 22; Miller Purvis, 20; C. K. Graham, 14.

For Second Vice-President: C. K. Graham received 215 votes; Miller Purvis, 65; J. W. Murkin, 18; O. H. McCord, 16; H. B. Donovan, 8; Wm. Biel, 6.

For Secretary-Treasurer W. S. Russell received 137 votes; S. T. Campbell, 117; Charles H. Ring, 84; George O. Brown, 13; George B. Wiemer, 11.

For Executive Board: David A. Nichols received 272 votes; George D. Holden, 256; S. T. Campbell, 116; Eugene Sites, 55; C. K. Graham, 27; Russell Palmer, 26; E. E. Richards, 18; C. W. Fowler, 15; H. H. Collier, 14; L. E. Roberts, 14; Horace Atwood, 11; A. K. Graham, 10; M. Buck, 9; C. McClave, 9; J. E. Rice, 9.

Who's Who in Hendom

I. Nestors of the Fancy.

Just what this name Nestor means I have never been able to find out. Once a chicken fellow told me it came from the Greek and when I asked him what that had to do with hens he said that Nestor was a Greek general who was very heroic in the defense of Troy and after he had become so old that he was mox nix as they gave him a berth in the public service, making the hens' nests in the yards of the old Greek senators, from which name we get the term nest, meaning something that the hen lays in, although not the grave.

It is commonly understood that the nestors of the poultry fancy live in the effete East, land of the rising sun and Rock Island Reds. Just why the nestors of the fancy never came from nor seemed to inhabit the Pacific Coast is more than I can tell. They coming from the East and deigning to dwell there indefinitely causes half of Hendom to say its prayers with its face turned that way. I know nothing about which way the other half turns, for it is not of man to know the whole of things in general or the dark ways of chickenists in particular.

But, nevertheless, there they rest—Felch, Babcock, Uncle Phi Williams, et al. You ask what these men have done to be entitled to the title of nestors? Well, principally, picking the golden eggs from the nests, so they say, though I had a hunch that Babcock has not picked a great many of them.

You see, it's this way.

Uncle Ike Felch, he who made famous the recent "Tell it to Paul and Mary for Isaac don't believe it," began his work among the hens as soon as the cornerstone of the fancy was laid, and from some who quote themselves as authorities I get it that he was in on the cornerstone business.—Uncle Ike, I say, began picking plums as soon as there were any trees in sight for he was one of the first to offer to the trade or what then might be "trade," the good old Brahma Pootras, Chittagongs, Shanghais, Cochins, and American Dunghills, alias Plymouth Rocks.

Uncle Ike got a wireless that some grand fowls were to be unloaded from the famous airship Zephyr of the Killing and Quick line, the Zephyr at that moment lying off Sandy Hook in quarantine or a trance, I forget which. So he caught the last train to Little Old New York the evening of the seventeenth of May, 1849, and arrived just as the Zephyr had dropped the precious cargo to her dock in Madison Square Garden, under the personal supervision of H. V. Crawford.

To say that Uncle Ike was crazy over these old timers puts it mildly, but he bought them and hustled home with them so Babcock would not see that he had been stung. They scarcely had any

feathers on their legs at all, at all! And they do say that Uncle Ike has never since been as joyous over anything, which accounts for his present somewhat cynical attitude.

But he has stayed with the fancy from that time and will be with us now and forever henceforth, nestoring as occasion demands and saying his say when he thinks it should be said. This has always been one of the bright things toward which we point in mentioning the fancy to those who from the outside are prone to look in: The fancy scarcely speaks its mind, leaving this for Uncle Ike to do.

Not long since Uncle Ike got into some sort of a pen melee with a man from the sunny clime of Utah. Generally, in a case of this kind, he came out with victory perching on his shoulder but in this particular instance he seems to have let his adversary put one over that stayed put, as Robinson says. I'll just quote you the last of what the Mormon handed him and you can judge for yourself:

"Anyone who accepts the law that individual development is a recapitulation of the evolution of the species will find it simply natural that the microcosm of the ontogenetic cell-tree should be diminutive, and in part distorted, reflection of the macrocosm of the phylogenetic genealogical tree of the species. (Gesam-melte Populare Vortrage, II., p. 68.)"

About the best thing that Uncle Ike ever gave to the fancy was the information he gave to Billy Russell and I while on the train years ago as we were leaving a little show out there in Iowa.

"Would you like to know how to score a bird twice the same, never making a mistake?" Uncle Ike asked us.

"Great heavens, yes," we both exclaimed, the pangs of learning the scoring business already beginning to leave us as we seemed so near the secret that was to make us both famous as perfect judges, and our personal estimates of self leaping to a hundred in the shade. We snuggled up close to him.

"Well, then, I'll tell it to you but never give it away," as we sat fixed and breathless, "always cut a bird one point in all sections!"

Our estimates of self or whatever they were dropped to eighteen below.

But, now, that we reach Babcock we lay all jokes aside and tread softly. Why and how he entered the fancy we have never heard but will give to you as soon as his autobiography gets off the press. Here is a man who has been wielding the pen lo, these many moons, and breeding Aztecs, Argonauts, Juggernauts and whatever he happened to get as a result of his many matings.

He has enlightened the people who read the Century, Harper's, Atlantic Monthly and Burr McIntosh Quarterly, with a wealth of hen wisdom and theories, lifting the literary end of the chicken business from the level it once occupied, till now it rests on the plane of fiction.

H. S. Babcock has ever put himself on the other side of the fence when it came to breeding something that the public demanded. A few adherents he has secured, but hardly enough to successfully make a cane rush on class day at the Rhode Island College of Agriculture. You see the name of a chicken is all there is to it. If you select something euphonious and sweet, something that sets itself easy in the mind at the first tackle, you have won the battle already, but Babcock has laid hold of nomens and cognomens that sound a great deal like the honk of a

Fiat, Darraq, Great Arrow, etc., coming at the rate of ninety miles an hour and consequently folks got out of the road, later only to find that it was some mechanic giving the distress signal.

In all truth he is one of the nestors of the fancy but has not taken a great many golden eggs from the nests, as he galloped to and fro in his work or play of nesting. He says but little on the questions that come up in the papers for discussion. Mark you, we say little, for, during the past year, we have hardly taken up a journal without something from his little nestoring pen. He gets around to Mechanics' Hall on old timers' day every year and usually says a little something during American Poultry Association campaigns.

Just what he is going to offer next to the breeders is hard to now determine but it will be safe to say in advance that it will have a pea comb.

Uncle Phi Williams has been steadily holding down his job as one of the nestors since the mind of man runneth not to the contrary and succeeding at it, too. When anyone tells you or tries to tell you that there are men who have helped the fancy more than has Uncle Phi, you can put it down that his carbureter has an obstruction in it or else his batteries are getting weak. Mayhap his spark plug needs the soot removed.

Taunton and Uncle Phi have been inseparable. Of course, Dr. Fox has always shingled in the town. Uncle Phi was one of the framers of the first Standard and organizers of the American Poultry Association, not incorporated. He has always been a light in the fancy and always will be. When he was injured a few years ago in some kind of an accident on the way to a show, all you could hear in the show room, after the news was spread, was, "How is Uncle Phi Williams getting on?"

And when it comes to judging, there never was a time when he could not be found in the duster, hauling the muts out to the light where they might be tabooed, the best birds winning.

As a breeder Uncle Phi has been getting some of the eggs while he was nestoring. He has sent birds to all parts of the world and they say to some countries not on my map. And no one ever heard a kick about the stock he sent them, either, all of which he blushes about, being that modest.

True, the varieties he has bred have not always been on the top rung of the ladder of popularity but you'll find him breeding Brahmas when they are even more under the bushel than they are today. That's the way he sticks to a friend.

The Spot-Light

Mr. Fisher, of the Poultry Tribune, is an ardent disciple of Ike Walton, and loves to linger near the pools where sluggish trout lie under the overhanging bank. He also "casts" for bass, fishes for pickerel and pike, and worships at the shrine of King Muskellunge.

* * *

Mr. Percy Cook and the Mr. Hallock of Long Island duck growing fame, are both motorists of no mean abilities. They can talk of carbureters, magnetos, spark plugs, "fat" and "lean" charges, "fours" and "sixes," and transmission, like perfected "showfers."

* * *

A Mrs. Ringling, wife of one of the brothers who have made this name fa-

mous, is an enthusiastic fancier of pure-bred fowls.

* * *

U. R. Fishel loves a bird dog as no other poultryman and he owns and breeds some of the best Pointers in the world.

* * *

They say A. C. Hawkins would rather hold the reins over a 2:06 pacer or trotter than judge Barred Plymouth Rocks.

Letter Writing

All business relying on correspondence to sustain it demands an apt letter writer for its best success. The poultry business is no exception, letter writing constituting a large part of it.

The most superior letter writing is a gift, good letter writing is accomplished by education and practice, business correspondence is the most simple, yet exacting. It is either a plain proposition, or an answer to one or more questions, is always substantially a contract, and in contracts the least said the better. Therefore the writer considers it comparatively easy to assist a large per cent who might fail and keep the poultry business from dying a natural death with so many beginners, and even some older breeders may profit on some points offered.

For years I have seen and heard the question asked, "How should I write my customer?" and always the answer from every source, "Simply write them in your own way." Very diplomatic, indeed. Question answered sufficiently and did not say anything.

To beginners not experienced in correspondence: Do not write long letters. You will say something of little or no bearing to the matter that will discourage your customer from dealing with you. Wait until you learn what to say, or what not to say. Answer all questions courteously and possibly add any valuable points of your fowls not asked, then stop. Those three page letters you received when you bought your fowls or eggs were fine, very interesting; read them over many times, didn't you? Did it occur to you that this party could possibly write a book on poultry and people might fall over one another to get it?

Your case is different at the commencement. However, you hold firm to the respect for your own business or no one else will respect it. Now you have fowls as fine as the originator of your strain, perfect beauties, worth the same price, but you can't sell them at the same price. Why? Is it because other beginners sell cheaper? No. Do people prefer to buy of the originator? No. Customers lack confidence in you. The originator has it established by years of business. The originator can say the birds are fine and that settles it, but you have got to prove it of your birds. Prove it and you are on a level with the originator. Have them scored by a competent judge. Get winnings at a good show. Know at all times how many eggs you get. They are very healthy. If possible get the opinion of a well known poultryman. These are some proofs, but be sure to keep your own opinion of them to yourself. That's what people refuse to take when you can't sell.

Remember the public has no confidence in your judgment until you are well established; then it becomes good or you could not have stayed in business, and it is accepted. Of course, you give your opinion of your fowls by stating facts

and proofs of their good qualities, but the customer sees only the proofs, the backing and grants you all the credit on finding them first class. Suspicion is your enemy, and when you have defeated it, you are safe and established in the poultry business.

Let us test an ordinary letter of the beginner. I anticipate the purchase of a pen of first class utility fowls and you answer, viz.:

"Your letter of ——— received. I think I can suit you on a pen, as I want to sell about half my flock. I have the John Doe strain direct, all even size and nice plumage. Everyone admires them and say they must have some eggs to set. They are the best layers I ever saw and I will give you pullets at two fifty each, and one of my best cockerels for five. Let me ship you this pen right away please. You can't miss it. Yours, etc., etc."

This is an everyday sample, "simply written in their own way." I do not order this pen and these are the reasons why: You think you can suit me with a pen. I felt sure of that when I wrote you, therefore quite unnecessary to remind me of it, so leave that out. You want to sell half your flock? Many would conclude your birds were not selling; that will kill your order. All even size and nice plumage, you say. What decision can I make on that information? What size? Bantam or standard weight? Scored? Who scored them? And everyone admires them and want eggs. Everyone is not a judge of poultry, so I don't like that. They are the best layers you ever saw. Don't give your opinion of your fowls. I don't know you and have no confidence in it; give proofs. How many eggs do they lay? The last paragraph of your letter is begging. Never do it, it is beneath all business or professions.

Your next reply to inquiry for fowls might be changed like the following, and you may get an order:

"Your valued letter of ——— at hand, for which please accept thanks. I am offering some of my fowls to avoid crowding, am pleased to quote you the price of fifteen dollars for what you demand. They are the John Doe strain direct and pure, scored by Judge ———, who paid them much additional compliment. My hens have an average record of 176 eggs last year. I will guarantee them to please you or refund your money. Again thanking you for the favor, I await your pleasure. Yours, etc., etc."

Beginners will observe each letter expresses the same intent. The last letter leaves out what should not be said and adds proofs, fact and courtesy—prime factors for success.

One more very vital point I must mention is never to misrepresent anything in your business, or you will quit the business. If customers do not put you out, the poultrymen will.

Union, Mo.

R. H. Hyde.

Question.—(1) Are Partridge Wyandottes considered as good layers as the Barred and White Rocks? (2) Are Partridge Wyandottes considered as good layers as the Silver, Golden and White Wyandottes? (3) Is it a good plan to keep green bone in front of your chickens at all times? H. M. B.

Traverse City, Mich.

Answer.—(1) Yes. (2) Yes. (3) No. This should be fed about three times a week; about two ounces to each fowl.

"RINGLET" BARRED PLYMOUTH ROCKS.

A Visit to Ameniam, N. Y., and Its Chief Industry—the Home of the "Ringlets"—One That Will Always Be Pleasantly Remembered. Mr. E. B. Thompson, the Originator of the "Ringlets." The Man, His Birds and His Work.

On the Harlem branch of the New York Central railroad, about four hours' ride north of New York City and two hours south of Albany, the state capital, lay Ameniam, N. Y., the home of the "Ringlet" Barred Plymouth Rocks, the one place above all others made famous by a poultryman. I doubt if there is a poultryman in the world today that has not heard of Ameniam, and but few that have not desired to visit there. From personal observation we learned that Mr. Thompson was not only one of its leading and most progressive citizens, but also that his was the leading industry of the place.

Ameniam is prettily located. This section is grand in natural beauty. To the east and west, and as far north and south as the eye can reach, are the hills and mountains, thickly wooded and only broken here and there by a mammoth boulder or the mountain home of a busy New Yorker. Over across the hills to the west is Smithfield, Mr. Thompson's boyhood home, and just beyond is the Hudson river. A few miles south stands Storm King mountain, the highest peak in the state, just as grim and beautiful and just as stern as it did in revolutionary times, when its very breasts defended the patriots and its dizzy heights supplied a haven for the defeated but by no means vanquished Continental heroes. Like a sentinel it viewed just as complacently the wrangle of those days as it now views the strife for business and prosperity. The Harlem valley has most attractive features for its entire length. We hope for the opportunity to again visit here when clothed in green. As the trainman called Ameniam we drew on our coat and stepping from the train found Mr. Thompson awaiting us. A fifteen-minute drive took us to his home, Valley View Farm. With this article we hope to illustrate this home, with the flagstaff and Old Glory at its peak, for all of this is the result of successful chicken breeding. The location is ideal and the surroundings, both in and out, impress one with its grandeur and welcome.

The Home.

Mr. Thompson certainly has a beautiful home, as well as surroundings, and we doubt if, everything considered, it has an equal. Every building, from the home and office to the coops and colony houses out on the range, are in perfect accord one with the other, and when we realize that all this is the result of his own poultry success, we can well add, "Well done."

Mr. Thompson started in the poultry business over thirty years ago, and, as he well put it, like a turtle on the ground. His health and determination were his only capital. His future depended entirely on his own ability to breed and produce the best, or at least the equal, of any man. In those days the knowledge of poultry culture was not to be learned or aided by the present day conditions, but the entire demand had to be

studied by experience and the ways of nature unraveled personally. Here were barriers that to one less strong would seem unsurmountable; obstacles as huge as Storm King itself had to be overcome, ere the hoped-for success could be attained. Today, as we find him serenely sitting in his cozy office, going over the past as if reviewing his labors, without a regret, and in particular in the mention of the past twenty-two years, during which he was a constant exhibitor at the Madison Square Garden Show, making a record with his "Ringlets" that has withstood all competition and is as clean-cut for all these years as his fondest hopes could desire. From this Mr. Thompson should derive a satisfaction as great as is accorded to any man to enjoy.

Near the home is the office building, where all business is transacted. Here we find Mr. Thompson, his secretary and stenographer. I may as well say here that Mr. Thompson is his own manager, while he has surrounded himself with three expert poultrymen. The boss is on the job every minute. His capacity for work is wonderful. Every detail of

E. B. THOMPSON

his immense business receives his personal attention. He dictates all his letters, selects all birds and eggs for shipping, oversees the feeding and care of every bird, and daily inspects his entire plant. After twelve to fourteen hours' work of this kind daily we can well imagine he rests content, for he personally knows all is well.

The Poultry Plant.

There are five long breeding houses here, all set on stone foundations, with roomy pens. Then there is the cockerel house, with pens 4x6 feet, a most desirable building. Out on the range are forty colony houses and nearly 200 brood coops, as they are called. This plant comprises twenty acres of land, slightly sloping to the south, and every inch is properly used by this mammoth one-breed plant. The breeding houses all have extra wide and long runways, with a strong sod. Here also they have their own water plant connected with every building. Each also has its own feed room, as well as smaller pens for extra males. Last year over \$3,000 was paid for chicken feed, this giving the reader a better idea of the size of this plant.

The "Ringlets" as Seen.

The reader, and in particular those

breeders who have visited here, can well imagine the difficult job ahead of me in describing the birds to be seen here. The Ringlets have characteristics of their own. Their quality, as seen here under the personal supervision of Mr. Thompson, can be fully appreciated, but to write and describe them for others to see through these lines is no sinecure. While we appreciate Mr. Thompson, we also appreciate our readers and fully understand our duty to all, and in all our work, both here and at other places, only state that which is evident and that which can be borne out fully by inspection.

The New York Champion of 1908.

In one of the first pens we reached we recognized the world's champion male of 1908. He is just the same ideal shaped fellow and shows the same characteristics that placed him above all at that great show. He now is some stronger in color, a quality of gain from a breeding standpoint. He has well proven his value in the breeding pen and now knowing his value, Mr. Thompson has him mated that to us looked right. Greater success is assured here. There are ten pullets in this pen, every one a gem in shape and color and style of barring. The evenness of this quality is evident, showing to best advantage. We believe his every expectation will be met in results here.

Next in line was another great pen, headed by a cock that never was shown, the one we thought, as a cockerel last winter, was the equal of any Mr. Thompson had. He has come to make a wonderful cock. His very clean and narrow barring, with shape and head points of the choicest, stamp him a leader of the best. This season he has for mates eight selected pullets from the New York champion, an excellent pen, with every assurance of results that can be given on any line. Another cock very similar to this one headed the next pen. Here again type, with sound color, was most evident, surely a strong breeder and a most valuable male. The females here were of the clean though strong color, a very unusual combination—still just the one mostly to be desired in this kind of breeders.

Strong colored eyes are a feature here in both males and females. The real value of a good eye in the Barred Plymouth Rock can't be overestimated for appearance as well as value in breeding. Here were several other cockerel mating pens, mated with the greatest care and bound to give results. Three of these were headed by brothers of the New York champion. In style and shape they are his exact counterpart. Each shows the same breeding lines and the pose and vigor so admired in this line. We handled all these males and also had the opportunity of handling several sons of each. There is class to all of them, the strength of undercolor being very evident. The shape and formation of tails was excellent and to our mind extra. A fair length tail that is plentiful without being spread too much and one that is finely finished, meets our approval. These champion brother cocks are a show in themselves. Mated to each are from eight to ten females of character in barring, and while of strong color, were free from sheen or brown. After handling several in each pen we can say the strong though clean wings were a revelation to us in this kind of birds.

Then there were other pens mated, all of which deserve special mention for their quality. One in particular that is headed by the second New York cockerel, 1909.

MILLWORK ☐ ROOFING ☐ LUMBER ☐

This fellow looks grand to us at this time. He has all the desirable qualities and mated as he is, should go down in history as one of the great producers of the day.

The Pullet Matings.

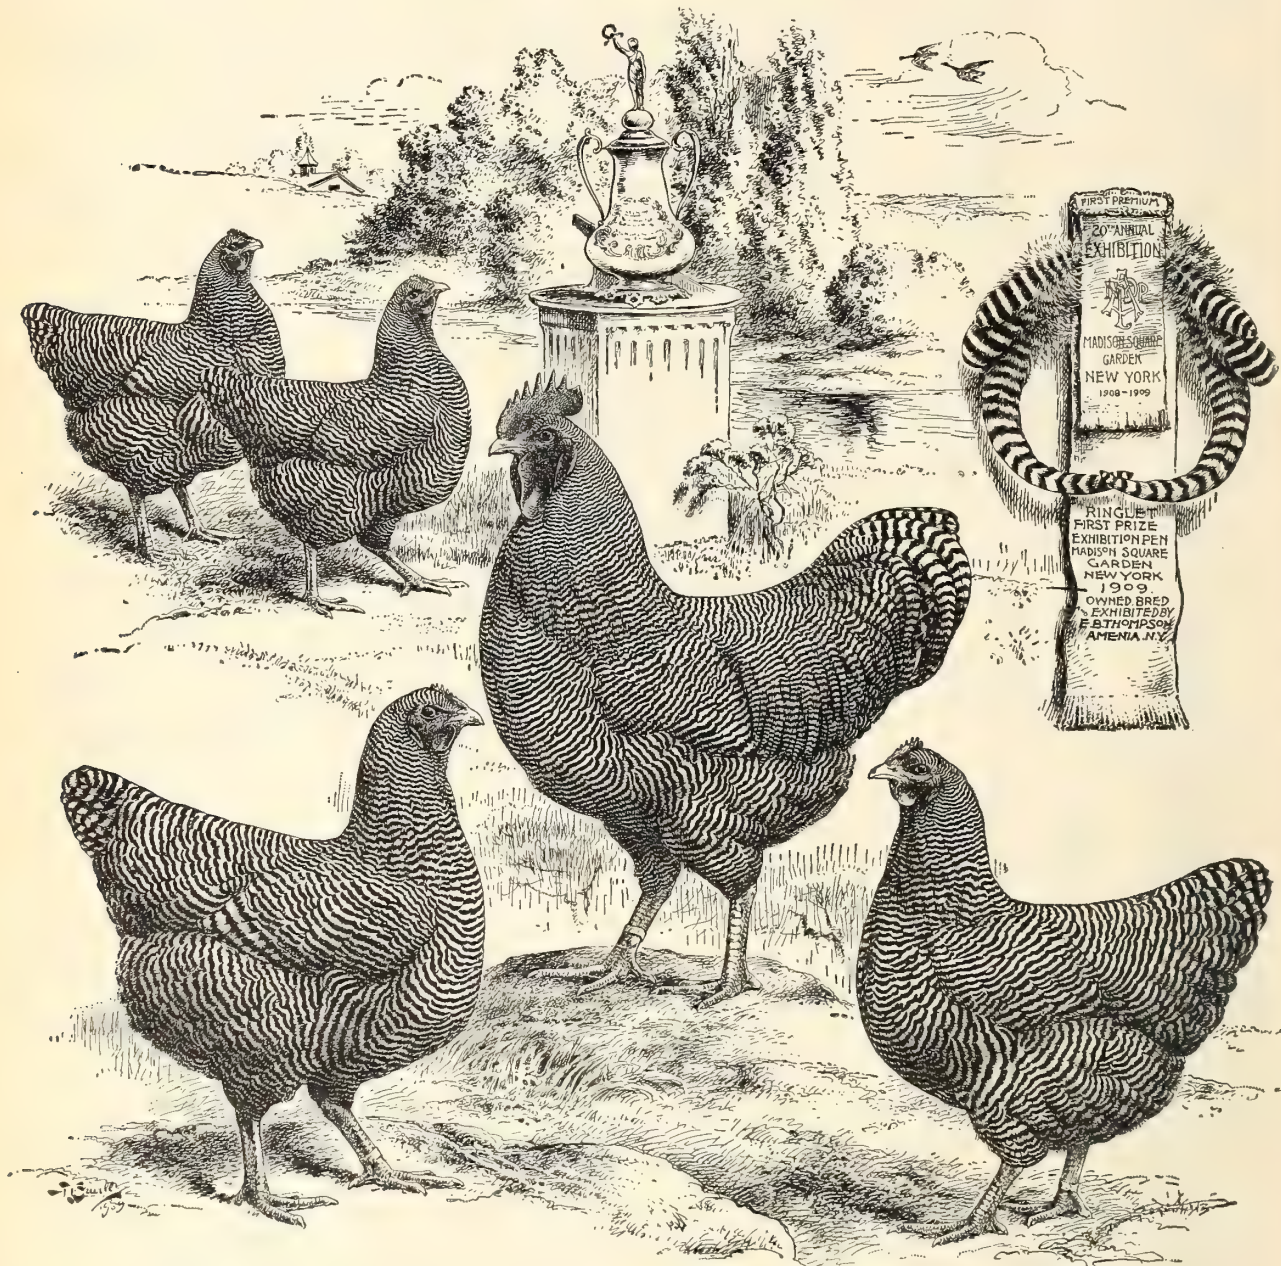

Away from home and without records at hand we cannot at this time give the important winnings Mr. Thompson has made with his female line. It is another long story and in full justice to him we wish we could give it here. While we all

son Square Garden takes four females that not only possess the highest quality, but they also have to match one another in every detail. The style of barring and the shade of color must be perfection itself.

Here we inspected several pullet mating pens and here also we found the hand of the master in strong evidence. Eyes and combs were a feature, while the males excelled in bright color and clean-cut barring. Mr. Thompson has Barred

1909, and, as we understood, two of the females of the second pen of 1907. And so on down the line were others. Each seemed better than the other and every one of them a rare collection of merit. We here well realize this difficult problem to describe further these birds. In all of them Mr. Thompson has used his best judgment in mating and I can fully agree with him in expecting results from each pen.

Mr. Thompson reports having had the

"Ringlet," first prize and silver cup exhibition pen at Madison Square Garden, New York, January, 1909. Owned, bred and exhibited by E. B. Thompson, Amenia, N. Y., originator of the "Ringlet" strain of Barred Plymouth Rocks.

know that he still holds the New York show record for winning every prize offered on pullets in one year, he has also made other records that plainly prove his quality in females. At the 1907 New York Show he won 1st and 2d on breeding pen, while at the 1909 New York Show he won 1st and 3d on breeding pen in what was the largest class ever shown. If memory serves me rightly, there were thirty-two pens at this exhibition. To win a pen prize at Madi-

Rock shape down to a nicety. The fair length backs, broad and full, still free from cushions, and the rich, yellow legs are to be admired. In one pen we noted the four pullets that were in his first New York pen, 1909, along with three others of the same line of breeding that were very close up. Heading this pen was a sharp, clean-barred cockerel of extra type and with undercolor even in all sections.

Another pen close by contained the four females of the third New York pen,

past year the best business of his long career. At this time his egg orders nearly double those of any other season, while the demand made on him for breeding and exhibition birds has also been greatly increased. The character as well as the amount of business done here was very evident at the time of our visit (February 14) for we saw thirty-nine baskets of eggs for hatching and several coops of chickens shipped on that day, and while one man was keeping right on with

packing more eggs. Mr. Thompson enjoys a very large foreign trade. He has shipped birds to every clime, and, as he says, the "Ringlets" encircle the globe and play their part in the commerce of the world. Mr. Thompson strongly believes in the mother hen and does most of his hatching in this way. The hen and chicks are taken to the brood coops out on the range to sport and grow. These coops are the best style we have ever seen and later we will attempt to describe and illustrate them for the reader.

If Mr. Thompson has desires beyond his poultry, they are fully met in his handsome Collie that follows his every step, and in the pony, "Bobo-Link," bought for his girls. The pony is a beauty and a thoroughbred, and I believe he enjoys him as fully as do his children, who drive and ride him.

As before stated, Mr. Thompson has exhibited at nearly every New York Show for the past twenty-two years, having the record for number of shows as well as number of prizes won. With all this in

mind we asked him what he really considered the best record he had ever made. He promptly replied, "My winnings at the two last New York shows." We can agree with him in this, as these records are fresh in mind. Never before was there such competition and never before were all the big breeders in line battling for the honors.

The first time Mr. Thompson exhibited at the New York Show he did not attend for lack of funds. Since then things have changed. I have here given a description of his home and place, have told you of his birds, and have pictured all as I found it. All this is the result of his own labors. His mode of advertising as well as his "Ringlets" has attracted attention and in all his years of business he has earned and received the patronage of the breeders. To Mr. Thompson the entire poultry fraternity owes much. While he has boomed the Barred Plymouth Rocks only, his methods as well as his success has brought many into the fold. With this as well as with other varieties

his example has been followed, and it is our candid opinion that this kind of breeders are the backbone of the poultry industry that today is second to none in our country.

H. P. Schwab.

BUFF LEGHORN CLUB CATALOGUE.

This club has just issued a neat, well printed and illustrated 64-page catalogue, telling all about their favorite breed, and nothing but the good and bad points about the Buff Leghorn can be found in this book. It is worth 25 cents to any person who is just beginning in the poultry business, but will be mailed free to any person addressing Geo. S. Barnes, Secretary, Battle Creek, Mich. If you are looking for some good fowl to add to your yards the studying of this catalogue will help you wonderfully. Buff Leghorns hatched in July will lay in December, and win prizes. What more is wanted of a breed of chickens.

The Peerless "Ringlets"

True to Their Tradition,

Are Again Great Winners at New York

At the Imperial Madison Square Garden Show,
December 29, 1908, to January 2, 1909,

E. B. Thompson's Barred Plymouth Rocks

win First and Third and Special Prizes on Exhibition Pens; second and special prize Cock; second and special prize Cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Silver Cup offered for best exhibition pen.

The race at this 1909 New York Show was a Marathon for speed and quality, and my First Prize Silver Cup Exhibition Pen was declared by expert opinion to be the finest ever exhibited---a paragon of perfection---and created a sensation as the finished achievement in modern Barred Rock breeding---unequalled in the annals of poultry shows. The sun never before shown on such a masterful exhibit.

The "Ringlets" are always imitated---but never equalled

They are first in record, first in quality, and

first in popularity

Their record at New York for 22 years is GOLD LINED

---it is a calendar of successive victories demonstrating step by step their irresistible advance towards the world's absolute leadership

"Ringlets" First Prize Cock at Madison Square Garden, New York, Winter of 1907-8

"RINGLET" EGGS ARE THE BEST THAT MONEY CAN BUY; THEY PRODUCE PRIZE WINNERS AND WILL MAKE YOU MONEY

Mr. E. B. Thompson,

Dear Sir:--Our poultry show has just closed and I am now ready to report the success I had with the chicks hatched from your "Ringlets" eggs. I hatched 17 chicks and succeeded in raising all of them. I entered nine birds in the show, five cockerels and four pullets, and won eleven ribbons, winning 1st, 2d, 3d and 4th prizes on pullets, 2d, 3d and 4th on cockerels, special prize for best colored male, special for best shaped female, special for highest scoring female, and first prize on exhibition pen. I am greatly pleased with the results and want to be entered as one of your regular customers.

Yours very truly,

H. L. Radebaugh.

Walworth, Wis., Dec. 12, 1908.

Elegant breeding and exhibition birds for sale in any number, and you may have the product of my skill gained by 30 years' experience at reasonable prices. THE GROVE HILL POULTRY YARDS

Devoted to Barred Plymouth Rocks and
S. C. Brown Leghorns—The
Strain and the Record
Behind Them.

The Grove Hill Poultry Yards are situated at Waltham, Mass., a half-hour's ride east of Boston. Here we found a plant devoted to Barred Plymouth Rocks and S. C. Brown Leghorns. There is much to interest one here, in the plant, its size and conditions, as well as in the birds bred here. Space and time now being limited, we shall in the near future describe this plant and its features fully, when we hope to also illustrate same. For the present we will content ourselves by picturing the birds and matings as they appealed to us, along with a short

Go where you will, Arthur Smith is favorably known. He has now been with the Grove Hill Poultry Yards for fifteen years. What he has accomplished in this time is well known history. His success has been phenomenal and has only been attained by the hardest kind of work and a thorough study of all conditions.

New York Show Record.

Grove Hill Barred Plymouth Rocks have been shown at the Madison Square Garden (New York) Show every year but one (1904) since 1902. During this time they have won as many first prizes on males as all others combined. While their effort for some years past has been mainly made on the male line, as above record so plainly shows, they have also been very successful with their pullet line, improving them and increasing their winnings each year.

Barred Plymouth Rocks.

At the 1909 New York Show they won

sador III, a male that in both winning and breeding has made a reputation unapproached by any male we know of. For the eighteen months following this show the pen headed by this male produced stock and eggs that were sold for over \$3,000, and this after retaining several of the best males produced.

At the 1906 New York Show, 1st cock, 4th cockerel and color special on male was won, and we also believe 3d pullet and some others. This is but a sample of what this line has done at this greatest of all great shows. Others should receive mention here and in particular Boston, but we are shy on records at the 1909 Boston show. Grove Hill entered but one pen of old and one pen of young Barred Rocks and won 1st prize on each, a clean sweep of all competed for.

The Jamestown Exposition.

The world's fairs have had an attraction for Messrs. Bright and Smith, and

Here are a few Poultry Houses from the big 212-page Catalogue of Cyphers Incubator Co., Buffalo, N. Y. This book contains many other styles of houses—open and closed, colony plan, continuous, scratch sheds and curtain fronts—built by fanciers, duck growers, practical poultrymen, experiment stations, and millionaires for city, town, village or farm; but that's only a little of what this book contains. It covers every branch of the poultry industry. It will be sent Free to you if you mention this paper.

review of the record they have made at the Madison Square Garden (New York) Show and some others of particular note.

Mr. Bright, the owner, is an intrusive fancier, having bred poultry for thirty or more years. Its attractiveness supplied features for recreation to this busy man. Being a close student, we were pleased to note that no detail has escaped him, and his wonderful success has been justly earned. For several years now he has made a specialty of the two breeds named and if any reader has any doubts of either Grove Hill quality or quantity, we would invite him to visit this plant and draw his own conclusions.

Mr. A. C. Smith, the superintendent, really needs no introduction here, his reputation as a poultry judge is only equaled by the reputation he has won as a breeder.

on cocks, 1st, 4th, 6th and 7th; special for four best cockerels; 2d and 3d pullets; first special for best pen mated to produce exhibition cockerels; first special for best pen mated to produce exhibition females, along with several other specials of note, including champion male on their 1st cock.

At the 1908 New York Show they won 2d and 5th cock, 2d and 4th cockerel, 2d pullet and 1st prize breeding pen. With this they also won male color special, and, if we remember correctly, first special for best cockerel mating pen.

At the 1907 New York Show they won cocks, 1st, 3d and 4th on four entries; cockerels, 1st, 4th and 5th; two places on breeding pens and several specials. Foremost among these was again the special for champion male, won by Cru-

we find they won at Jamestown 1st, 2d, 3d and 5th cock, 1st, 2d and 3d cockerel and 1st, 3d, 4th and 5th pullet. At the Pan-American, 1st, 3d, 5th and 7th cockerel and 1st and 6th on cocks.

St. Louis World's Fair.

Here again they sustained their previous records of note by winning in what was claimed to be the greatest poultry show ever held, 419 birds competing, 1st, 2d, 5th and 9th cock, 1st and 3d cockerel, 2d pullet, 3d hen and first prize breeding pen, with nearly all specials included.

With this record the reader can well imagine the quality of Grove Hill Barred Rocks. We just find that this is not complete and will here mention that they have won the male color special at both

the New York and Boston shows for three successive years.

S. C. Brown Leghorns.

If there is an attractive variety besides the Barred Plymouth Rocks that combine value and practical quality, then it is the S. C. Brown Leghorn. Grove Hill excel in these, as the following records will plainly show.

At the 1909 New York Show they won more prizes by far and double the number of firsts of any competitor, also most specials.

Same show, 1908, they won three first prizes, also including three of the five prizes on cockerels and three of the five prizes on pullets.

At the 1907 New York Show they won four out of a possible five first prizes, and others, including 1st, 2d, 3d and 4th on cocks, and all specials.

At Boston, 1909, they won every first prize but one, and won 2d on that class. Here another sweep was made by winning 1st, 2d and 3d hen and 1st, 2d, 4th and 5th on cockerels and all specials.

At St. Louis World's Fair, in the largest class of Leghorns ever shown, Grove Hill won four out of the five first prizes, 1st, 2d and 3d cocks and 1st, 2d and 3d on hens.

Here are records of note. Still they only tell what this line has done shown by Grove Hill. The winnings of this line in the hands of their customers is another story, one pretty well known, but not claimed as an advertising privilege by them.

Grove Hill Barred Rocks.

It was our privilege to handle and inspect these birds as we wished to, which we gladly accepted. One of the first pens to attract our attention was headed

by the first (N. Y.) 1909 cock. He also won the champion male prize at this show. As seen here and at this time we can well say he is improved over his New York Show condition. He has every desired quality and a vigor so evident;

these were shown at New York, not being finished then. Both are rare quality birds of the finest type and a color and style of barring all their own. Rich red eyes and grand, well-set combs finished them off to our taste. The females in these

A well-mated pair of Rhode Island Reds. Bred and owned by Walter Sherman, Newport, R. I.

grand and snappy in barring and excellent head points. His nine mates are a strong lot and I can well agree with Mr. Smith in expecting choice results here. Close by followed two pens headed by Crusador III cockerels. Neither of

pens (five in each) were a grand lot. One hen, a sister of the 1909 (New York) champion cock, was a revelation as well as a dream.

Pen 27, headed by Crusador III, the New York champion male and first prize

Second Prize Black Orpington Cockerel, Chicago, 1908

Single Comb Buff and Black Orpingtons

Madison Square, Chicago, Cleveland, Indianapolis Prize Winners

10 Grand Matings

All headed by large, vigorous broad low down males. These pens will produce the winners for the large shows another season. Are you looking for eggs from such birds? If so, try me for a setting or more this season. I replace all infertile eggs and I guarantee every one a square deal. : : : : :

cockerel of 1907, was our mecca, as well as for those of other visiting poultrymen. This noble old fellow has produced more actual value than any bird of any and all kinds. The rare selection of females seen here promises well for another season's record in sales and prices.

Pen 25, headed by the sixth New York cock, 1909, a son of the above and one that has proven a good breeder. He is greatly improved over his New York condition. His barring is extremely regular and he is also well mated.

Pen 33 is also headed by a 1909 winner, fourth cock. This is one of the brightest and cleanest birds we have seen; very sharp color and clean-cut bar.

Pen 39. Here we found the cockerel that won fourth at New York in a very unfinished condition. It was a satisfaction to see him and to note him in full feather and at his best form. He has come into all we expected of him. His grand, even, bright color was to our liking. He also has a grand comb and extra eyes. His mates include some of the best hens we have seen.

This is the story in a rather crude way

F. Gage Cutler, Carthage, Ill., who has one of the finest poultry and seed corn farms in the state. He breeds all varieties. Send for his fine catalogue.

of the birds seen here. Pen after pen attracted our attention. Each has its features and each shows evidence of best quality and greatest care in its matings. One fact we were pleased to note here, and that was the care exercised in mating. We found in each pen, with but one or two exceptions, from four to seven females. There are no fillers-in here. Quality is the aim, and under these conditions quality is bound to be had.

Pullet Matings.

Rapidly Grove Hill females have come to the front. As Mr. Smith put it to us a year ago in saying, "I now have our male line where we can easily handle them and can now give more attention to the pullet breeders." This has come true, as their records show. In this line we found seven mated pens. The birds handled grandly and we thought the males in quality just the ones to warrant all claims made for them. Among the females we noted several of their winners at the late New York Show and the pen females, both pullets and hens, that won at Boston, 1909. Type is prominent, with size next, and if we were to select another feature it would be the

GROVE HILL POULTRY YARDS

Wm. Ellery Bright, Prop.
A. C. Smith, Supt.

Box 410, Waltham, Massachusetts

SUPREMACY MAINTAINED

BRIGHT'S : : : : : BARRED PLYMOUTH ROCKS

Clearly showed their superiority at the last Madison Square Garden, New York, Show, 1908-9. At this peerless show, in what is by general consent conceded to be the supreme test of quality in all realms of Barred Plymouth Rocks, Grove Hill won:

**MORE REGULAR PRIZES
MORE SPECIAL PRIZES**

**MORE PRIZES ON MALES
MORE POINTS ON MALES**

MORE POINTS

and by so doing practically repeated not only their record of last season, but also of the season before.

WE ARE SO QUIET that perhaps these facts are not fully appreciated. **WE ASK** those who doubt to look up the records. We challenge contradiction.

OTHER INTERESTING FEATURES were our winnings of four out of eight prizes on cock birds, including **FIRST** and that much sought for prize in the whole poultry universe.

The Barred Plymouth Rock Male Championship

AT MADISON SQUARE GARDEN, NEW YORK—Which was awarded to the first prize cock bird. This is the second time in three years that **Grove Hill** has so been honored. A win on cock birds speaks more strongly than volumes of eloquence for the "staying" and "breeding" qualities of a line. But four wins out of eight, and one a first and **still better a championship** is certainly **conclusive** proof that our males retain color and barring after moult. All this points to the fact that they must be strong breeders.

Special Prizes

from a breeder's standpoint are oftentimes more significant than regular awards and that Grove Hill got

**Special for Best Pen Mated to Produce Exhibition Males and
Special for Best Pen Mated to Produce Exhibition Females**

in such competition as this is particularly significant and very pointed in lines. The significance of this award on the pen to produce exhibition is considerably emphasized by our **special for best four cockerels**; to say nothing of the cock prizes and **special for best shaped male on the first prize cock**. While the award on best pen to produce exhibition females gets further weight from our win on pullets of **second and third**, easily the best win in the class.

We Bred and Raised All These Birds

OUR SUPREMACY rests not only with our champion line of males, but our females for the past two seasons have made the best records of any. For proof, consider their winnings at Jamestown of first, third, fourth and fifth and at Indianapolis of first, third, fifth and seventh as well as first pen; at New York 1907-8, second pullet and **first pen** and 1908-9, already chronicled here.

THE BEST EGGS FOR HATCHING that the breed ever produced will be laid in these ample yards this season. Eggs from the same yards, we must hatch our winners from unreserved, \$5 per 13, \$15 per 50. Special selected settings to meet the needs of any flock at special prices.

SOME SURE-ENOUGH breeders of winning specimens for sale in both lines at right prices. Get one of our males—one that is sure to set you right—\$5, \$7 and \$10 each.

H. D. Brinser, Manchester, Va.

color and barring of wings. These stood out strongly and deserve praise. The value of a good wing can't be overestimated.

S. C. Brown Leghorns.

In these we found nine matings made. The first Boston cockerel heads a grand pen of hens. In our report of that show we claimed this male to be the best we had ever seen. We still make this same claim. His round, rich color and ideal markings, combined with his shape and size and a head with as near a perfect comb (five point) as we ever expect to see, finish him in detail and place him, in our estimation, the peer of all.

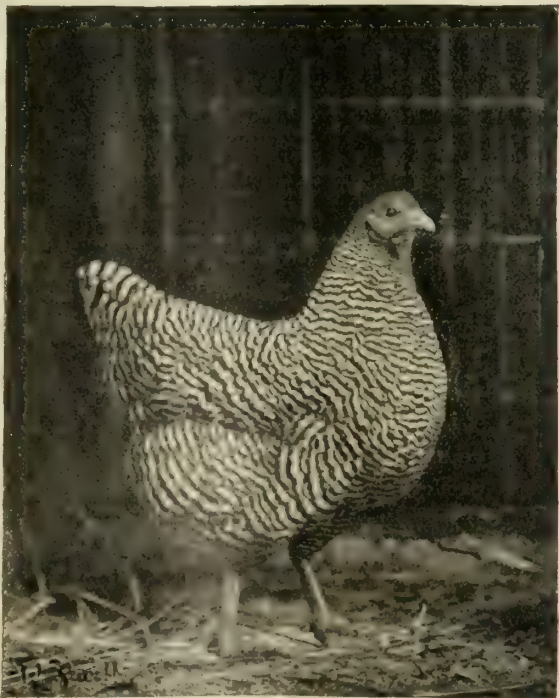

In pen 6 we recognized another wonder in the first New York cock, 1909. He also has every quality, with type, markings and color, and to top all a handsome comb and head. Several others need attention here, but time and space forbid. We hope to make other trips in the future and may then find time to refer to this line again.

In coming here we had great expectations. All these have been more than met. It is a real pleasure to visit a plant of this kind. Grove Hill has made good its every claim, as I can see it. We have known Mr. Bright and Mr. Smith for years. Both have and are daily doing their share to the advancement of the industry. Mr. Bright has been most liberal in aid extended to the Barred Rock Club and Mr. Smith is now its national secretary. The writer well knows what that means and hopes every breeder interested in Barred Rocks will write Mr. Smith for club circular, etc.

H. P. Schwab.

AN OPEN LETTER TO THE COMMITTEE ON REVIEW OF THE STANDARD.

Dear Sirs: This letter has to do with the Barred Plymouth Rock. So much controversy has arisen over the system of "double mating" devised to meet the requirements of the Barred Plymouth Rock at as present described that I have determined to promulgate a plan which I think should be adopted and forever set at rest the preponents and opponents of the double mating system. In the first place let us see what started this system. The Standard calls for the same variety in shade and color of the female as exists in the male. Now it is known to old breeders of Plymouth Rocks that the product of any mating of the barred variety is a lighter colored male than female. This being true breeders soon determined that to get the same shade of color in the male and female offspring from one pair was impossible. This was the beginning of experimentation. As a final result of a great many experiments by all kinds of Plymouth Rock breeders it was pretty well determined how to get standard colored males and standard colored females corresponding alike in shade. To do this it is now an established fact that standard colored males are produced by mating a standard colored male to females darker than himself; that standard colored females are produced by mating to a standard colored female a male lighter in color than herself. The first mentioned mating is technically known as "cockerel mating," whence prizes are awarded in some shows for best pen mated to produce standard colored males. The second kind of mating is known as "pullet mating," and we see prizes given for best mated pen to produce standard colored females. As

WYANDOTTES**

100 head of fine birds in each variety yet for sale. MY TOLEDO WINNINGS on Orpingtons are first cockerel; first and third hens; second, third and fourth pullets and first pen. In Buff Wyandottes I won first, second and third cocks; second and third cockerels; third, fourth and fifth hens; third pullet and first pen. These winners mated for best results will be found in my pens. Eggs \$2.50, \$3.00 and \$5.00. Send for free catalogue and order early. KORDEE POULTRY FARM, Box 33, Prairie Depot, Ohio.

COREY'S GLODENGLOW STRAIN OF BUFF PLYMOUTH ROCKS

The Champion of New England

As a breeder and exhibitor of Buff Rocks for twelve years, my past and present winnings make the above statement an acknowledged fact. At the great Boston Show, January 12-16, 1909, on eleven entries my Buffs won fourteen ribbons and all association cash specials for best display, best cock and four hens; best cockerel and four pullets; also winning the State Cup for best cock, hen, cockerel and pullet; also the District Cup, comprising all the New England states, for best cock, hen, cockerel, pullet and pen. This is acknowledged to be the grandest victory ever won at Boston on Buff Rocks.

I have bred and sold winners all over the Union. They have been sold and shipped to Japan for government breeding purposes. I bred and sold the second pen at the World's Fair, St. Louis, and many New York winners, and "best of all, I breed all my winners."

Shall have a few settings from these winners for sale at \$5.00. A limited number for sale. Would advise placing your orders early. Circular free. Address

M. J. COREY, 900 Summer Avenue, Springfield, Massachusetts

**FIRST LESSONS IN
POULTRY KEEPING**

We may safely claim that never before in the history of poultry literature has any publication so thoroughly and systematically handled the subject of proper poultry keeping. Beginning with the elementaries—the very first principles—the student has been taken along step by step, each lesson followed by the next in its logical order. This policy of "begin at the beginning" enables the laying of a solid foundation of useful knowledge, the necessity and value of which for future success, cannot be overestimated. The following list, a complete "lesson" being devoted to each subject, will help you to form some idea of its great value.

- Winter Rations for Laying Stock.
- The "How's" and "Whys" of Feeding Laying Stock in Winter.
- General Principles and Rules for Poultry Breeders.
- Putting Principles of Breeding into Practice.
- Hatching Chicks With Hens.
- Rearing Chicks With Hens.
- The Care of Chicks from Weaning to Maturity.
- Points to be Considered in Poultry House Construction.
- Two Plain Cheap Poultry Houses of Simple Construction.
- Five Good Small Poultry Houses.
- Summer Management of Fowls.
- Continuous Poultry Houses.
- Incubator Rooms and Brooder Houses.
- Simple or So-Called Scientific Poultry Feeding.
- Poultry House Fixtures.
- Poultry Fences and Yards.
- Getting Ready for Winter.
- Selecting and Fitting Exhibition Birds.
- Fattening Fowls.
- Selling Market Poultry and Eggs.
- Selling Thoroughbred Poultry and Eggs.

The price of the book alone is 50c, postage prepaid, but note our great **SPECIAL OFFER** of a yearly subscription to Farm-Poultry, the great National poultry paper, and a copy of "First Lessons in Poultry Keeping" for only 75 cents. (Price to Canada, 90 cents)

This offer is made you strictly on approval. If for any reason you are dissatisfied return the book in good condition and your money will immediately be refunded without any comment whatsoever. We know that you would not part with this book for ten times its cost if another copy was not procurable. We can hardly conceive of anyone overlooking this opportunity who desires practical, thorough, systematic and dependable instruction on poultry keeping. To obtain the benefit of this splendid combination you must send orders and remittance to

FARM-POULTRY PUB. CO. :: Room A, BOSTON, MASS.

a result of these two matings what do we have for results? From the "cockerel mating," males that meet the requirements of the Standard and females that are too dark to be classed among Plymouth Rocks, "cockerel mating females" so called. For exhibition purposes none of these females can ever hope to successfully compete for a prize (except when given for a cockerel mating pen).

From the pullet mating the result is females that meet the requirements of the Standard and males that are too light in color to ever compete successfully for a prize (except when given for a pullet mating pen).

Thus in the cockerel mating offspring one-half the progeny, the females, are debarred from ever passing as standard Plymouth Rocks, and in the pullet mating offspring one-half their progeny, the males, are debarred from ever competing in the show room or passing as standard Plymouth Rocks. Here then we have one-half of all the Barred Plymouth Rocks at one full swoop cut off from a

BRED & OWNED BY H. C. SHEPPARD,
BEREA, OHIO.

ANCONA COCKEREL, WILLIAM I.

King of America. First at Madison Square Garden, New York city, 1908-1909. Bred and exhibited by H. Cecil Sheppard, Berea, Ohio.

right to their own name, and we have to describe them, not as Barred Plymouth Rocks, but as "cockerel mating," "Barred Plymouth Rock females," or "pullet mating Barred Plymouth Rock males." These facts are not generally known, be it said, but only to the initiated. To get these results what must the breeder do? He must keep at least a pen of each color, and if he maintains his strain two pens of each. Here then we have the undisputed fact that a breeder of Barred Plymouth Rocks under present conditions must keep at least four pens of birds in order to keep his strain and have exhibition birds. Think of that for a breeder on a city lot or a farmer.

Of late years some few recognize this fact, and where they have acquired a reputation are specializing into either "pullet mating" wholly or "cockerel mating" Plymouth Rocks.

Now under such conditions how is the small breeder who wants to keep only a small flock of one pen or at most two going to maintain his flock and get standard birds? The simple answer is he can't do it. And what is more he doesn't do it. In the first place not one in a hundred unless he has made a special study for years knows the "sys-

Goshen Poultry Yards, Goshen, Indiana

tem." The fancier who is induced to get "pure bred" stock and buys an expensive sitting of eggs from some noted breeder gets perhaps a cockerel mating sitting or a pullet mating sitting or perhaps a mixture of both. Then when he mates up the result of his hatchlings in the winter he gets as a result a general mix-up of cockerel mating with the pullet mating. As a result the next year he has a mixed up mess, some light and some dark of both males and females, some neither light nor dark. Going to a poultry show he sees a pen of first prize birds all of a uniform color, males and females. Taking a fancy perhaps to them and expecting to get the same, he buys, mates them together, gets something entirely different again and is fooled a second time. And so it goes.

The truth is that no first prize male mated to a first prize female in Barred Plymouth Rocks will produce anything like a winner. The result is simply a mongrel. And why? Because, and here is the whole meat in the coconut, the double mating system has been practiced so long and universally among Barred Plymouth Rock breeders of note that by following the system laid down for double mating they have produced two different varieties of Barred Plymouth Rocks. The cockerel mating Barred Plymouth Rock is as different from the pullet mating as the Barred Rock is from the White Rock. The system, without meaning to, has evolved two different varieties of the Barred Plymouth Rock, and the sooner the public knows it the better for the Barred Plymouth Rock. Let the "cockerel mating" kind be known as the "Dark Plymouth Rock" and the "pullet mating" kind as the "Light Plymouth Rock," and to avoid confusion call the present White Plymouth Rock "White Rock." Or if these names don't suit invent a name that will. The name is not so essential. But it is essential that the public should know that the present standard Barred Plymouth Rock male is a different variety from the present standard female.

The writer deprecates the multiplicity of breeds and varieties, but where the variety already exists as it does here it should be recognized. If this were done and it was made plain in the Standard that the female of the "Dark Plymouth Rock" was a shade darker than the male, and that the male of the "Light Plymouth Rock" was a shade lighter than the female, then the two varieties could be recognized and the person raising only "cockerel bred" or "pullet bred" could exhibit specimens of both male and female from one flock and stand a show to win. And what is more to the point, the buying public would not be fooled all the time.

The writer has bred Barred Plymouth Rocks for years, but at present keeps only a pen of the "cockerel mating" kind, preferring the Rose Comb Black Minorca because single mating. I like the Plymouth Rock and probably always will, but the present "system," as Lawson would term it, were he a breeder, ought to be abolished and a sensible one inaugurated in its place. I'm for the two varieties of the Barred Plymouth Rock in our next Standard, "Dark" and "Light" Plymouth Rocks. They certainly exist. What are you going to do about it?

Ben L. McFadden.

FIRST PRIZE PEN S. C. BUFF ORPINGTONS CHICAGO DEC. 1908.
 BREED OWNED AND EXHIBITED BY
 C. S. BYERS HAZELRIGG IND.

ORPINGTONS

BLACK : WHITE : BUFF

IT HAS BEEN an open secret for several years that we were furnishing the winners at Madison Square, Boston, Jamestown and Chicago to the exhibitors of Black Orpingtons, but it is not so generally known that our Buffs and Whites are now as good as our Blacks.

The above Buff cockerel is not yet a year old, yet his type is as pronounced an Orpington as any Black produced by any breeders but ourselves. We are keeping the ideal type in mind in the Buffs and Whites, and we are not breeding the Rock type, just to get the good color and under-color in the Buffs.

Our supremacy in Blacks is pretty generally acknowledged. If you ask any poultry judge who has the best Black Orpingtons in America nine times out of ten, he will reply "Brown & Coleman." The tenth time he will tell you he does not know. When you stop to think that we were strong enough to sell six birds that won five firsts and four seconds at Madison Square, Boston, Jamestown and Chicago in one season, and that we sold scores of other birds as good or better the same year that were not shown at these shows—and further when you consider that we did not sell the best of our year's crop you will realize that our supremacy is in Blacks absolute and unquestionable.

Remember that we won eighteen prizes at Cincinnati in Buffs and Whites, and we since bought the cream of several foreign and domestic flocks of Whites. This is our second year in Whites and Buffs, but we have right now both type and color and size. Free catalog.

Remember that we won eighteen prizes at Cincinnati in Buffs and Whites, and we since bought the cream of several foreign and domestic flocks of Whites. This is our second year in Whites and Buffs, but we have right now both type and color and size. Free catalog.

Brown & Coleman
Station L : Cincinnati, Ohio

ANENT THE REVISED STANDARD FOR BARRED PLYMOUTH ROCKS.

Taking it for granted that all judges of exhibition poultry, and all interested in making a new Standard, recognize the fact that there has to be two distinct varieties of radically different color in Barred Plymouth Rocks in order to breed exhibition specimens; the males in one class and the females in the other falling into the category of show bred stock. They also recognize that there is an intermediate class wherein a sound colored male is bred to sound colored females and the progeny comes fairly like sire and dam but lacking in under-barring. Why not make three standards, whereby male and female in each class could be judged on its breeding merits?

This may look complicated to the novice and to those not particularly interested in Barred Plymouth Rocks, but it isn't complicated to the judge or to the breeder. Any judge would go into any flock of Barred Plymouth Rocks and make a very fair estimate of the breeding qualities of the various birds handed to him for his verdict or opinion, but in order to do so he would have to overlook all pertaining to the ideal as we term it. Certainly the exhibition specimen would be judged on its merits in its relation to the ideal as the judge understands the ideal, or rather the judge will pass on the bird according to his knowledge of high-class specimens, for he has never seen the ideal and never will and never expects to; neither would he recognize the ideal should he see it, for there is no ideal; but we must recognize the established fact that fanciers are breeding two distinct varieties of Barred Plymouth Rocks, and that farmers and commercial poulterers are breeding between the fancy lines. Now I must insist that these usages are established facts, not vague probabilities, and I also insist that any competent judge can render a score card on each well bred specimen in any of the lines when judged from the breeding probabilities, and I also insist that a standard is possible for each class, but it would be another matter to merge the three classes in one exhibit. Therefore would suggest that Barred Plymouth Rocks should have three entry classes and should be judged on breeding characteristics rather than the worn out ideal.

I would also suggest that the only change in weight needed is on pullet. We who breed this class know that any pullet will be laying at six and one-half pounds and is therefore past her best show form, and I know that any pullet that has not commenced laying at six pounds will have no trouble in reaching seven and one-half pounds as a hen. Therefore I would vote for the pullet to show at six pounds and leave the other weights where they now stand, for the Plymouth Rock is not a bit too heavy for commercial purposes, neither is it difficult to breed to standard weight, as at present.

Why not cut out section judging as it now stands and judge the class on surface color effect; on color in its relation to any other color but black and white in its modifications; on barring as one section, and on under-barring as another?

I wish breeders, judges and makers of standards would think this over. What value might be put on a score card which passed on the various sections as I have suggested? Surely that card would de-

It isn't so hard to hatch the chicks—any good incubator will do that. The trouble lies in getting the little downy fellows through the chick period to the money making time. Those who learn only from their own experience pay dearly in time, in loss of chicks, in money. The new book,

"Chick Culture"

By A. A. Brigham, Ph. D., embodies the experience of the successful poultry raisers of the world. Dr. Brigham is a recognized authority. His whole life has been devoted to the study, practice and teaching of agriculture and poultry culture. He is a graduate of the Massachusetts Agricultural College; completed his education in the world-renowned Goettingen University, Germany; was called by the Japanese government to the Imperial Agricultural College at Sapporo, where for five years he was professor of agriculture; returning to America, he was appointed professor of agriculture at the Rhode Island State College. The results of this experience and his studies are embodied in "Chick Culture."

"Chick Culture"

Starts with the mating of the stock birds and the setting of the eggs and carries the reader clear through to the mature fowl. There are 80 pages, fully illustrated.

L. C. BONFOEY, Box H, Vernon, Connecticut

note something tangible to the probable purchaser. Just at present a color cut in the various sections can mean anything, and the oldest and wisest breeder in the land cannot fathom the judge's mind when analyzing the current score card, excepting when he finds b. f. in the margin.

And we are now to have a new ideal. Why not cut that out and give us true half-tone illustrations of the highest honored specimens? Surely that would convey the truth. There's nothing better than the best. The last ideal issued showed several shape faults that would be severely dealt with in the show room and a vast amount of impossible barring.

This is a practical country, a practical people. Please give us a practical Standard. Matt Baldwin.

Sioux City, Ia.

THE AMERICAN QUEEN BIDDY THE LAYING HEN.

The American eagle is a noble bird, but Queen Biddy ought to be stamped on the American dollar, for Biddy by her steady laying brings the jingle of more gold and silver in the pockets of the poultry keeper and farmer than all the gold mines in the land, and she does a great deal of the digging herself. It's a fact, according to the statistics, all of the gold and silver mined in all of the world hardly more than equals the annual production of the eggs alone, and does not come within a measurable distance of the value of poultry and eggs combined.

We used to call cotton King, but poultry, in 1908, outdid the cotton and the cottonseed by \$50,000,000. The cotton and seed \$650,000,000, and the poultry and eggs were the enormous sum of \$700,000,000. This is more than the gold, silver, potatoes and oats combined.

It is wonderful how the poultry industry has advanced, at such a rapid rate that no mathematician can keep up with it.

The number of eggs laid during 1907, taking the statistics, was 25,000,000,000, which would equal 2,083,330,000 dozen. They are marketed mostly in 30-dozen packages. It takes from 350 to 375 crates of 30 dozen each to the car. This would take about 198,195 freight cars. If placed end to end they would make about 1,450 miles of track.

One would be quite apt to think from that vast increase in the amount of eggs and poultry that prices would go down, but this is not the case, for prices of eggs and poultry have rapidly advanced within the last few years. It is very interesting to the poultry keeper that the market is never overstocked with strictly fresh eggs or with the first quality of poultry, at prices that pay a good profit to the poultry keeper.

It is no longer a question as to whether there is a profit in poultry keeping. The question is, have they the ability to make a success of it? The man behind the gun, on him depends the success or failure. If they breed and feed on the right system, I know of no more profitable line of farming than poultry keeping. There are hundreds making a grand success in keeping poultry, and there are also hundreds that are making a sad failure of it. A great many start in poultry keeping on a large scale without knowing anything about poultry and without any system of breeding or feeding. Without some

good system failure is certain. You must have a good system for success. I am often asked, What is the best breed? I don't believe there is any one best breed. There are good and bad hens in all breeds. No one breed has all the good qualities. It depends on what you want of them. It is not so much in the breed as it is in the strain, what they have been bred for. If you want fancy show birds, then start with the best strain of show birds you can find, and stick to a line of breeding and you will succeed along that line, but it is not the show birds that have made the \$700,000,000; it is the laying hen and the market poultry, that are filling the farmer's and the poultry keeper's pocket with gold and silver. My advice to all that want to make money out of poultry is not to start with fancy poultry, but start with the best laying strain that you can get and have some system, for there is no business success without system. I want to impress upon your mind the importance of getting the hen that has been bred to lay, for it is the egg forming that gives the most profit and it takes as much time and labor and nearly as much feed for the hen that lays 100 eggs as one that lays 200 eggs in a year, and your extra 100 is clear profit. The hen to be a great layer must be a fowl of strong constitutional vigor, with frame of good size, a hen of good digestion, for wasted food is wasted money. This is why the Jersey cow is one of the most profitable. She has a very strong power of digestion. At the St. Louis Exposition the Jersey cow won a very substantial and decided victory. She once more proved her ability, not only to produce large quantities of milk, rich and butter fat, but what is more important, her ability to produce more economically than other breeds, to give a better return in product for the food consumed. I know this to be true of Jerseys. I have bred and developed. Masorita, No. 159774, is one of them with a butter record of 26½ in 7 days, 61 pounds of milk in one day, 412 pounds in 7 days, 1,705 pounds in 30 days, 7,200 pounds in 4 months, 12,950 pounds in 10½ months, testing 775 pounds of butter. Why are they such great butter cows? They have been bred for years for butter and milk.

Believing there was a great field open for a strain of hens that were bred to lay, I was inspired to try what I could do. I first studied out a system, for without some system there can be no great success. It has required years of breeding and experimenting and a whole lot of patience and money to establish my system, and it has proven a great success. It is a new system brought out by hard thinking. Man does his thinking by means of his reflective faculty. Some men think. Others do not. Thinking is hard work. Some men prefer to drift along with the tide or ride along in the same old rut. In every vocation in life men become distinguished because of their excelling greatness. I have learned by actual tests and experimenting that many theories advanced by many poultry writers are without any foundation whatever. Many writers are gifted to write an entertaining article, have advanced many false theories. Knowing that dairy-bred cows transmit the function of yielding large quantities of milk to their offspring, but a cow may be a great milker and a hen may be a great layer, but if they haven't the

The Fire-Fly Egg Tester

An electric egg tester that is practical and durable. Dark shelled eggs tested as easily with the Fire-Fly as white eggs are with a lamp tester. Omi Canker Cure. Guaranteed. 25c by mail prepaid. Write for circular.

Eggs for Hatching and Breeding Birds for Delivery any time

Pittsfield, Me., Season 1909.

TO PROSPECTIVE BUYERS OF

BREEDING BIRDS, HATCHING EGGS or DAY-OLD CHICKS.

GREETINGS:-

We beg to advise you that we are prepared to handle orders for breeding birds; hatching eggs or day-old chicks in BARRED ROCKS in the most prompt and efficient manner and WE SOLICIT YOUR VALUED PATRONAGE.

We believe we are fully justified in saying that NO ONE IN THIS COUNTRY IS BETTER EQUIPPED to give you GOOD SERVICE and GOOD VALUES. Our stock is strictly STANDARD BRED, thoroughly healthy and vigorous, reared on UNLIMITED FREE RANGE; IT EXCELS IN EGG PRODUCTION, being bred for EARLY WINTER EGGS; it matures early and is profitable from a UTILITY STANDPOINT. It also EXCELS in SHOW ROOM COMPETITION, birds of OUR OWN BREEDING winning this season 24 REGULAR and SPECIAL PRIZES at the A.P.A. STATE SHOW at PORTLAND, including first and second cocks, first and second cockerels and A.P.A. SWEEPSTAKES GOLD MEDAL on COCKERELS against birds from the best known yards in the country. In BOSTON against the HOTTEST COMPETITION IN THE WORLD we won EIGHT REGULAR and SPECIAL RIBBONS. Our birds are BRED both for SHOW and for UTILITY and we can furnish EXCELLENT BREEDERS at REASONABLE PRICES. We are offering now UTILITY COCKERELS at \$3. and \$5. and A-1 EXHIBITION BREEDERS for \$10. and \$15. UTILITY PENS four pullets and a cockerel, \$16. EXHIBITION BREEDING PENS \$30. to \$60. We are glad to ship birds on approval to be returned and MONEY REFUNDED if not satisfactory.

We make a SPECIALTY OF EGGS FOR HATCHING, price of same being, FROM UTILITY STOCK \$1.50 per 13, \$4.50 per 50 or \$7. per 100; FROM SPECIAL EXHIBITION MATNGS \$4. per 13, \$12. per 50 or \$24. per 100. All eggs are SHIPPED ON THE DAY THEY ARE LAID and are carefully packed thus insuring their being delivered in any part of the country IN A FRESH AND HATCHABLE CONDITION and WITHOUT LOSS OF VITALITY. We stand behind our eggs and GUARANTEE GOOD HATCHES under ordinary conditions.

WE ARE PREPARED TO FURNISH DAY-OLD CHICKS from our MAMMOTH INCUBATORS in any quantity and GUARANTEE SAFE DELIVERY at your nearest express depot. PRICE 25 CENTS EACH or \$15. PER 100.

OUR STOCK PAYS. WE WINTER 4100 birds and raise 15000 to 20000 chicks each season. If it did not pay we would soon have to assign to the grain man. IF IT WILL PAY US IT WILL PAY YOU; WHY NOT TRY IT? You can depend on us to use you honorably and give you FULL VALUE FOR YOUR MONEY. We refer you to the A.P.J. WE WILL MAIL YOU OUR 24 PAGE ILLUSTRATED CATALOGUE FREE ON REQUEST.

Yours very truly,

PITTSFIELD POULTRY FARM CO.,
L.B. 5651, PITTSFIELD, MAINE.

Small and Large Orders Given Equally Careful Attention

We Ship what You Pay For

power to transmit the greatness to their offspring, they are worthless as a breeder. My greatest of all hens, Golden Princess, laid 291 eggs in a year, or 24¼ dozen. The eggs were very large, weighing 2 pounds to the dozen, which is ½ pound more per dozen than the average weight of eggs. The 24¼ dozen weighed 48½ pounds, which is nearly 7 times her own weight. Of the

ordinary eggs, it would have taken 32½ dozen to weigh 48½ pounds. At 27 cents per dozen they would bring \$6.55, allowing \$1.50 for feed leaves \$5.05 gain. She is not only a great layer, but a great breeder. She has a great power of prepotency to stamp her offspring with her own characteristics. She and her chicks are exceptionally strong and vigorous, always on the go,

always the first off the roost in the morning, looking for a worm or grub. I have a pen of her pullets which have averaged 271 eggs in a year. This is a most remarkable egg record; showing her great power to transmit her own characteristics to her offspring. I consider my system for producing eggs at a small cost of feed the greatest of all systems. My system of feed costs but 95 cents per hen for a year, only about 4 cents per dozen for the eggs that Golden Princess laid. In her second year of laying she has produced 280 eggs, coming within eleven of her first year's great record; showing without a doubt that my system of feed does physically degenerate. The 50 R. C. Rhode Island hens that averaged 240 eggs have just finished another great record-breaker of 225 eggs.

It is true that I am enthusiastic over my system of breeding and feeding. Enthusiasm is proof that I really believe that I have something of great value to me and to others.

Emerson says that "nothing great was ever achieved without enthusiasm." My motto is better still—"hustle and ambition." For satisfied I am not; I shall strive for something better, to improve the utility fowl. My system has worked wonders in great egg yields and the size, vigor and stamina have been increased. You have got to apply the right principles or you will ruin the vigor and stamina of your hens. Everything possible must be done to increase the environment of the hen, such as to insure her comfort and invite her largest production under my method. No doubt arises as to the eagerness of buyers, to secure whatever I may have to offer, for last year I could not supply 50 per cent of the great demand for the hen that is bred to lay. When breeding for eggs, the male is the greatest factor, because a large number of the female's offspring are likely to possess the qualities of both. It needs the heavy laying hen to produce the sire. I am very fortunate. For the coming year I have cockerels enough from my great hen Golden Princess to head nearly all my pens. You must know the law of hereditary organism before you can intelligently breed for a large egg production. It takes a great deal of labor and experimenting. Simply breeding and selecting from the best layers is of little avail unless other conditions are considered. It is the thing to force feed with stimulants for a large egg yield. This is all right if you don't want to use your hens for breeders, but it is entirely wrong if you are trying to build up a great laying strain. The 50 Rhode Island hens that averaged 240 eggs, the average price the eggs sold for was 27 cents per dozen, which is \$5.40 per hen, allowing \$1.50 for feed leaves \$3.90 profit per hen, but my system of feeding costs only 95 cents per hen, leaving a clear profit of \$4.35 per hen or \$217.50 for the 50 hens. This is producing eggs at less than 5 cents per dozen for feed. Some men in giving the profits of their flock figure the chickens hatched and raised. This, I think, is not fair. If I figured the chickens raised from the flock it would bring the profit up to a very high price, as I reared over 300 that I would not sell for \$1,000. I have given only what the eggs sold for at the market price.

Ira P. Watson.

Fredonia, N. Y.

Welch's Partridge Wyandottes

Bred to lay and to win, the two in one. We offer a limited number of settings of eggs from our special mating headed by the first prize cock at Edon, Ohio, January, 1909, scoring 93, mated with females his equal, scoring from 92 to 92¾. (have official score card to show.) Eggs from this pen \$3.00 for 15, \$5.00 for 30. I breed for quality, not quantity. Unsatisfactory hatches replaced at half price. A fair deal for your money back. Fertility guaranteed. A fine cockerel for sale.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer

Question.—I have had two very bad cases of blindness develop in my Brown Leghorn pens, one about January 15—a hen totally blind, and now I have a cock under treatment that was totally blind on the 5th of this month. The cases were identical; eyes looked perfectly all right; no swelling of the head or signs of roup, and as far as I can see no signs of conjunctivitis. I have treated the two cases with a strong solution of "creoline" or J-eyes. The first case did not respond to the treatment, but second is doing nicely. Will you kindly tell me in your next issue what this disease is and a remedy for it?
A. J. S.

Kingston, Jamaica.
Answer.—We are unable to state cause or remedy. Will some of our readers please answer above?

Question.—(1) What is the cause of the wings of chicks growing faster than the rest of their bodies? Does it do them any harm? (2) What is your opinion of using planer shavings for scratching material in houses for laying hens? (3) Do you think sprouted oats are good green food for winter?
West Hauley, Mass. H. D. P.

Answer.—(1) We are unable to say why this is, but seems to be natural, as

all chicks feather out this way. (2) We do not approve of the use of shavings for scratching material. In a short time fowls will have them thrashed into a fine powder and the dust arising from this will affect the birds. (3) Yes.

Question.—(1) Can you tell me if the Black Minorca hens will set (in some cases)? (2) Are they as good in egg production as the R. I. Reds? (3) Are there many breeders of Blue Andalusians?
Steubenville, O. F. A. G.

Answer.—(1) Yes. (2) Yes. (3) No.

Question.—(1) Have been feeding some calves' lungs to our hens. We drive a nail through the wind pipe into a post and let them pick at them. They are very fond of them. We would like to have you tell us through the American Poultry Journal whether they are good for them or not. And also whether pork scraps that the lard has been fried out of are of any benefit or not. (2) What do you consider best to do for fowls with a common cold?
Mukwonago, Wis. C. G.

Answer.—(1) If the calves' lungs are fresh they are considered good for fowls. Small quantities of pork cracklings can

be used with profit. (2) Lard and kerosene oil. Melt a lump of lard the size of an egg, to which add a tablespoonful of kerosene oil. Give a teaspoonful to each fowl twice a day for three or four days.

Question.—Where can I buy the White Faced White Spanish, as I am a breeder of the Black Spanish?
E. R.

Freistatt, Mo.
Answer.—Will some breeder of this variety please answer?

Question.—(1) Should Buff Leghorns be a chocolate color, orange or lemon? Should it be very dark or light? (2) What is the Standard weight, shape? (3) Please give seeds to be used in the scratching shed. (4) About how many Buff Leghorns can be kept in a poultry house 10x16? (5) Could you give me any plans for making trap-nests?
Royersford, Pa. E. P. B.

Answer.—(1) This should be a rich golden buff. (2) There is no Standard weight for Leghorns. Shape is described in the Standard of Perfection. (3) Any of the small grains, such as wheat, millet, buckwheat, etc. (4) Twenty-five. (5) See ads in this issue.

Question.—Is a pen 24x27 large enough for 12 chickens. (2) One of my hens seemed to be mopey; would eat all right; in two days she was dead; her crop was hard; when I opened it found it full of grass and whole corn and no grit.
Gratiot, O. S. H. L.

Answer.—(1) Yes, large enough for 50. (2) Crop bound. This can be easily remedied if taken in time.

Question.—Having a hen apparently in the best of health and laying until two

ROYAL BLUE BARRED ROCKS OCCUPY THE STAGE AT MADISON SQUARE GARDEN NEW YORK, 1909

In the strongest class of Barred Rock Cockerels ever seen at NEW YORK, and with all the noted breeders in line, I entered 4 birds and won FIRST PRIZE, COLOR SPECIAL and Grand Sweepstakes Prize Medal for the best cockerel in the entire show. Rex Beauty Specialists

Dept. 220 290 E. 43rd St., Chicago, Ill.

days before she died, take very suddenly sick and die, what would be the matter with her? When sick her droppings were thin and yellow as the yolk of an egg; she also bled a little from her nostrils and comb, which was very red and nice, turned dark. I fed wheat and oats in litter morning, gave a mash of bran and shorts at noon and wheat, oats and whole corn at night. What would you name the disease? Is it contagious? What would be a remedy in such cases?

Mont Alto, Pa. Mrs. G. W. S.

Answer.—Congestion of the liver. A disease that is not noticeable until in a very advanced stage. Dr. Salmon's book, "Diseases of Poultry," will give you full information. Price of this book is only 50 cents. For sale by us.

Question.—I have a small piece of ground I plant in early potatoes. Is there anything I could plant the last time I plow them or when I raise them to furnish green food for my poultry—something I could feed after running through a root cutter? If so, please advise the best for winter feed.

T. E. L.

Greencastle, Pa.

Answer.—Turnips may be sown in July and make a very good winter food when cooked.

Question.—Will you kindly tell me what I can do to cure diarrhea among my hens? They have plenty of grit and the right kind of food. Have tried many remedies without help; also a high-priced one and warranted to cure, but received no permanent benefit. Would like something that is a real cure if possible.

L. D. M.

Walton, Kan.

Answer.—(1) Tannic acid and charcoal will do the work. A teaspoonful of tannic acid, 1 pint of powdered charcoal, mixed with 6 quarts of mash feed and fed once a day. As soon as diarrhea is checked discontinue the acid; but the charcoal can be used indefinitely, as it is good for fowls at all times. It absorbs the gases in the intestines and helps very materially in keeping the fowls in a healthy condition.

Question.—I have some late July and August hatched Brown Leghorn pullets that began laying when about five months old; their eggs were very, very small, about one-fourth or one-fifth the size of an ordinary egg, but here is what I am confused about: They almost invariably have two yolks in them and one of the smallest had three yolks. They were as perfect as you ever saw. Can you give me any reason for such things?

J. C. M.

Answer.—This is no uncommon occurrence and is caused by two or more ovarian capsules becoming ruptured at about the same time, and the yolks descending the oviduct so near together that two or more are included in the same shell. The size of the eggs will no doubt increase as the fowls get older.

Question.—Is one drake enough for five ducks?

Wakeman, O.

Answer.—Yes.

Question.—(1) Would small gravel sieved out of sand about the size of radish seeds do for grit for little chicks? Would it be all right to have it in front of them all the time? (2) I have forty-eight hens, laying from thirty to thirty-five eggs a day. What per cent would you call that? I have

RHODE ISLAND REDS YIELD BIG PROFITS

Many a farmer has made a big dent in his mortgage by the help of Rhode Island Reds.

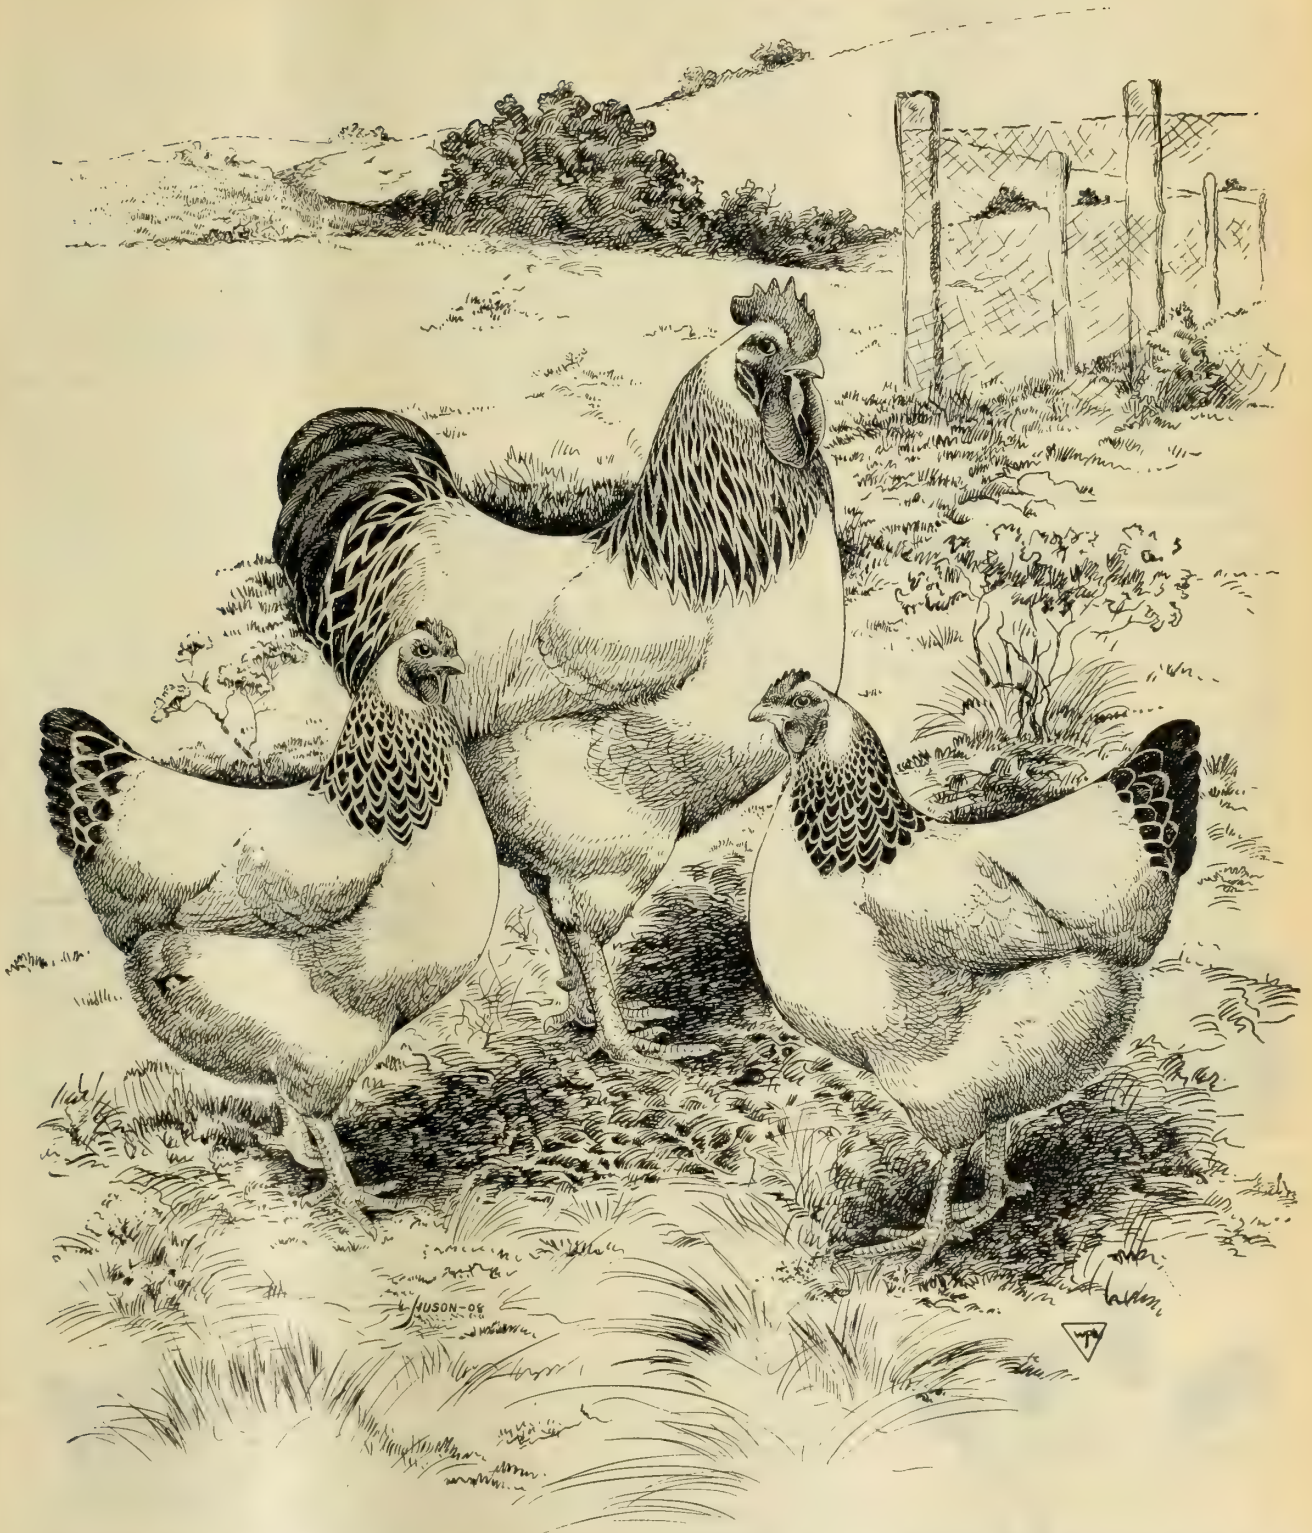

Walter Sherman's new book tells you all about these wonderful fowls—how easy they are to take care of, how fine they are for table use, what prolific layers they are—even tells you how to take care of them when sick. Every poultryman should have it.

The pictures in the book are true to life—each from a photograph made at Mr. Sherman's place. Two of them, by the new French color photography, show the birds in their natural plumage—so real that you almost expect them to move.

How to Get this Valuable Book Free

Send me 20 cents—to help pay the cost of the book. Fifty cents would be a low price for it. With each book is given a rebate coupon worth 20 cents on your first order for two settings of eggs. Send for the book today.

WALTER SHERMAN, Citizen's Farm, Newport, R. I.

The best layers and the most beautiful fowl in the world. Send 2-cent stamp for circular, describing stock and giving list of winnings. Eggs and stock for sale. **RALPH C. GREENE, Sayville, L. I., N. Y.**

the S. C. White Minorcas. (3) Do you think the fireless brooders are as good as the ones that heat? (4) Do White Minorcas have Standard weight; if so, what is the Standard for cockerels and pullets? How high had the cockerels' combs ought to stand? (5) By what breeds were the White Minorcas originated? Do you know the man who first bred them? I remain yours truly,
B. S. B.
Panther, Pa.

Answer.—(1) Small gravel can be used for grit, but it is not considered nearly as good as the prepared chick grit. (2) 67½ per cent. (3) We have never used the fireless brooder, but they are highly recommended by those who have used them. (4) Cockerels 6½ lbs.; pullets 5½ lbs. Standard says comb should be quite large, straight and upright, and should have six regular and distinct points. See Standard for further information. (5) Our new book, "Origin and History of All Breeds of Poultry," will give you full information on this subject. Price only \$1.

Question.—Please tell me what caused my hen to die. (1) Her eyes were glassy, she staggered when she walked but she always managed to get on the roost at night. She lived a very long time and finally died. She was very light in weight. I did not open to look at her insides. (2) I have a turkey that walks in a very queer way. She lifts her feet up rather high when she walks. She is in very good health. Is this rheumatism?
E. G.
Plains, Kan.

Answer.—(1) This is what is known as "going light," for which there is no remedy. (2) This is not rheumatism. Soak the feet and legs in warm water and apply carbolio ointment.

Question.—What was the trouble with this pullet? I went down to the coop in the morning when it was on the ground with its head twisted half-way around and was trying to twist it farther. It was all right otherwise. It could not eat anything. I let it live five days and used the hatchet. Please inform me if there is a cure for this disease.
R. E. C.
Kewanee, Ill.

Answer.—This was evidently caused by the fowl being injured.

Question.—Is it advisable to take the rooster out of the pen and leave him out any length of time if you want to save the eggs for hatching?
J. H. K.
Washington, D. C.

Answer.—No.

Question.—(1) What size house would be required for 100 Leghorn laying hens and how divided off? (2) In order to have strong and fertile eggs how many ducks should be with one drake? (3) Should more than one drake be with any one pen at the same time?
Philadelphia, Pa. G. T. D. B.

Answer.—(1) Six square feet of floor space should be allowed for each fowl. A house 18x35, divided into four pens, will accommodate 100 hens. (2) From four to six. (3) No.

Question.—(1) What is the cause of soft shelled and thin shelled eggs? What is the remedy? (2) Some of my hens are laying very small eggs. How can they be fed to produce larger sized eggs? I feed a commercial scratch

food in litter in the morning, table scraps at noon and corn at night. A hopper of bran and shorts and oyster shells are before them all the time. (3) Would it be advisable to keep a hopper of wheat screenings before them all the time?
C. W. H.

Dassel, Minn.

Answer.—(1) This is caused by either a lack of shell-making material or by inflammation of the shell-forming chamber of the oviduct which no longer secretes calcareous matter. Give the fowls plenty of wheat bran, cut bone, crushed oyster shells, etc. Also give plenty of green food and avoid the use of condiments and cayenne pepper. (2) We are unable to tell any way to increase the size of the egg. (3) We do not advise the use of wheat screenings as feed for laying hens. For best results they should be fed a good quality of whole wheat. This may be kept before them at all times, in hoppers if you so desire.

Question.—We intend trying as a mixture in our poultry soft morning feed of "dried animal blood." Could you tell us what quantity should be used and how often for 100 birds?

New Westminster, B. C. **J. C.**

Answer.—Two ounces to each fowl three times a week.

Question.—(1) Does it hurt to take the roosters away from the hens during the seasons you do not care for the eggs to be fertile. (2) What do you think

\$50 CASH and \$10 Per Month buys a \$500 25-acre poultry farm. New 3-room cottage like cut. Best climate, water and markets in Sunny Virginia. Other lands \$10 acre up. Send for beautiful pamphlet, maps and rates.

MANVILLE, ILLINOIS

The Plain Mark.

Note the secure snap fastening and large raised numbers of the aluminum

Convenient Leg Band.

The one really convenient marker. Bent ready for use. Sizes for any breed. Prices: 12 bands 20c; 30 bands 45c; 60 bands 75c; 100 bands \$1.00. Write for sample—cheerfully sent free.

H. O. SHAW, Box 103, GRINNELL, IA.

would be a reasonable price to ask for settings of eggs from a pen of five hens and a rooster for which I paid \$100? (3) Could a person save up the eggs from five hens till they had fifty and then put them in an incubator, or would the first ones be too old. A. S.

Kansas City, Mo.
Answer.—(1) No. (2) Five dollars. (3) This would all depend on the length of time it took for the five hens to produce fifty eggs. For best results eggs should not be kept longer than two weeks.

Question.—What is the right heat to keep or have a brooder when you put in little chickens? W. H. M.
Webster, Ia.

Answer.—Heat under the brooder should be about 95 degrees when chicks are put in and this degree of temperature should be retained for the first week, after that time the heat may be gradually reduced each week.

Question.—(1) I have a S. C. Buff Orpington hen that nearly drags the ground and seems to carry a hard lump, oval shaped. Will she likely lay and would her eggs likely be fertile? (2) Would it be all right to mate a Buff Orpington cockerel with four hens and six pullets? (3) How should chicks be fed from the time they are hatched until a year old to get the most growth? (4) Would it be a good idea to buy eggs to raise cockerels for next season's breeding? (5) After eggs have been shipped, how long should they be kept before setting? A. C.
Glenford, Ohio.

Answer.—(1) This hen has gotten into this condition by being too fat. She may lay, but the chances are that not many of her eggs will be fertile. (2) Yes. (3) By using some one of the various chick feeds now on the market. Space will not permit us to go into detail in this department. (4) Yes. (5) Twenty-four to thirty-six hours.

Editor American Poultry Journal.

Dear Sir: In your March edition of American Poultry Journal I notice F. Weskins, Jr., answers A. W. Fowler of Hudson, Mass., noting among other absurdities his statement that hens fed ham laid eggs having ham flavor. I do not know that to be a positive fact, but do not think that statement of Mr. Fowler lacks common sense for the following reason. I know of a number of hens that were given coal oil for cold, and for some time after the eggs could not be eaten, having a decided coal oil flavor. I suppose Mr. Werkins will consider this statement absurd, but I know it to be a fact. T. K. Waidley.

Boiling Springs, Pa.

Question.—I have twenty R. I. Red hens and two cocks that were hatched in June last year. They began to lay in January. (1) Can those hens be expected to lay by October again under good care? (2) How many chickens can be wintered in a shed 12x24 feet? (3) How can I rear young chicks hatched in latter part of March and beginning of April in order to get them to lay during winter months? (4) What feed should be fed to laying hens in summer that can roam over plenty of soil? (5) How can hens be made to molt early? J. R. B.
New Holland No. 2, Pa.

Answer.—(1) Yes. (2) About 50. (3) By giving them the proper feed, care and attention and in no other way. Cannot give you full details as to just how this

should be done in this department. (4) A good quality of wheat and oats. (5) The feeding of sunflower seeds will assist in making the fowls molt early.

Editor American Poultry Journal.

Dear Sir: In reading over questions and answers I see F. M. G. of Short Creek, Ohio, desires to know how to break S. C. W. Leghorns from flying over a 78-inch fence. I am a breeder of the same, have bred them for 20 years; had the same trouble, so I built two yards 33 feet long, 8 feet wide, wires sides and top for experiment. Kept my young chickens in those runs and the following spring turned them into my main yard, which has only 6-foot wire fence and

never had any trouble since. That is four years now. It is in the early period of their lives that they learn to fly and in having overhead wire they will try a few times, and being frustrated in their attempts to fly up, they will not try when one year old.

My main building is 29 feet long, divided into three equal parts 9 by 12. I never keep over 36 hens and cockerels in the same. Last year I only kept 20 pullets and the results were better than when I had 36. From the 20 pullets for the year I got 265 dozen eggs. Seldom have a sick chicken and always have them tame enough that they will eat out of my hand. A. L. Dougherty.

Mansfield, Ohio.

Sibley's R. C. Rhode Island Reds

Won at Detroit, Jan. 9-14, '09, 23 prizes, 12 firsts and 11 others. At Chicago, Dec. 16-19, '08, 17 prizes, 10 firsts and 7 others. At Indianapolis, Sept. 7-11, '08, 11 prizes, 5 firsts and 6 others. 51 prizes, 27 firsts and 24 others in three of the largest shows tells its own story. Send for mating circular.

Irving A. & Frank Churchill Sibley : 1032 E. Jefferson St., : South Bend, Indiana

MURDER

Now is the time of year when your poultry houses are alive with the mites or jiggers that prey upon your chickens at night and which drop off, full of blood sucked from the chickens' bodies in the mornings. This occurs nightly and it is plain to be seen that such sapping of the blood of your chickens weakens them, retards their growth and prevents them from laying as many eggs as they otherwise will do. Schild's Lightning Lice Murder is the only known remedy that will positively and completely kill these mites or jiggers and all other poultry lice, and leave them dead in piles for you to see. It is simply scattered over the poultry houses by the hand. Not a mite can possibly escape. Our Murder is very powerful and may be used successfully to disinfect all foul smelling places. We guarantee results or money refunded.

Shows, Associations and Clubs

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News

BEREA, O., SHOW.

The fourth annual show of the West Cuyahoga County Poultry Association at Berea, O., February 3 to 5, was a great success in every way. The quality of the poultry was quite remarkable and called forth many comments from visitors. One thing noticeably absent was the "kicker." If he put in an appearance at all no one knew it, and he certainly found no roost to light upon.

Many home exhibitors were surprised to find themselves up against winners from Madison Square Garden, Cleveland, Boston and Cincinnati, but there were others surprised. The winner at the big show was surprised in many instances to find himself taking second or even third place under birds raised at home. In every class the competition was sharp and no inferior birds went away with a blue ribbon.

The association has good reason to be proud of the exhibition and surely feel that no one was robbed of his gate fee. The association will spare no effort to make the next show larger and better, and invites the hearty cooperation of all fanciers in this neck of the woods.

MARIETTA, O.

The Ohio Valley Poultry Association held its annual meeting Thursday evening, February 11, in the assembly room of the court house with a large attendance.

The following officers were elected for the coming year: President, Prof. F. P. Wheeler; vice-president, H. G. Chamberlain; secretary and treasurer, F. C. Snodgrass; assistant secretary, W. H. Smith. Board of directors: A. M. Farlow, W. T. Buell, J. H. Oliver, P. C. Treadway, O. R. Ballard.

S. T. Campbell, of Mansfield, O., was selected to judge the next show, which will be held January 10 to 15, 1910.

This year's show was a record-breaker, and it is anticipated that the one next year will be the largest in this part of the state.

THE NATIONAL BLACK LANGSHAN CLUB OF AMERICA ANNUAL REPORT.

To Members and Friends Everywhere of the National Black Langshan Club:

Our Annual Meeting was held at Indianapolis, February 4th, 1909. The attendance was good and a lively interest in all the affairs of the organization was very manifest. Viewed from an angle the future looks good. All reports from all sources show the club to be on a sound basis, financially and otherwise. It has grown rapidly and is doing a good work. We have awarded a large number of cups and club ribbons in a number of states and expect to increase this very largely another year. These awards have in all cases been well received and the in-

terest and enthusiasm which these prizes are putting into our shows is already very marked and promises a great deal for the future of the Langshan as a show bird—the most lordly and attractive of them all.

From all sources breeders are showing their good will and interest in the club's affairs. This we very much appreciate and it is as it should be. Your interests are our interests. We are amply able to take care of deserving breeders everywhere. The thing we want you to do is to give us a chance.

BRONZE TURKEY TOM.

One of the big fellows. A prize-winner. Sire of many 30-lb. toms at nine months old. Heads flock of J. Bert McConnell, Ligonier, Ind.

If you are not a member we want you to join, not that we want your dollar so much (although we have to have funds to pay expenses) as we want your influence. And it will help you to join. It gives you good standing and reputation. A good member in every community makes another claim to our help and another pull upon our club prizes; and every prize you win adds a value to your flock, and our business as a club is to help your business. And the more business you do and the more attention you attract to your flock the more the breed is advertised and "popularized," and this is the thing we are trying to do; and it well deserves it. So send along your application for membership to the new sec-

retary and he will issue you membership certificate and instructions entitling you to all the rights and benefits of club members. Send in your membership as soon as you can so that your name may appear in the list of members which will be published in our annual year book when issued.

While the club at its organization was of necessity local, it is rapidly becoming national in fact as well as in name, and during the next year we expect to make it absolutely so; and to breeders in other states we want to suggest that to this end you interest yourself as much as possible in the club's affairs.

At this meeting the following officers were elected: President, J. W. Moore, Cambridge City, Ind.; vice-president, Oscar W. Payne, Scranton, Pa.; secretary-treasurer, M. S. Barker, Thronton, Ind. Board of directors: G. W. Wilkins, Atlanta, Ind.; Napoleon J. Barnes, Pine Grove, Ky.; Nelson Rice,

New Market, Ind.; E. B. McCormick, Letts, Iowa; Philip Anthes, Columbia City, Ind.

I shall be glad to hear from you at any time concerning the Black Langshan Club and its interests.

Respectfully,
M. S. Barker, Sec'y-Treas.,
Thronton, Ind.

February 20, 1909.

AMERICAN POLISH CLUB.

The annual meeting of the American Polish Club was held in Mechanics' Hall, Boston, Mass., January 13, 1909, at 2 p. m., and the following officers were elected for the ensuing year: President,

Charles L. Seeley, Afton, N. Y.; general vice president, Albert J. Braun, Syracuse, N. Y.; secretary and treasurer, M. V. Caldwell, Lisbon, O.; assistant secretary, George W. Trent, Wilmette, Ill.

Executive Committee—Charles L. Seeley, Afton, N. Y.; Albert J. Braun, Syracuse, N. Y.; M. V. Caldwell, Lisbon, O.; John A. Gough, Meriden, Conn.; George E. Winters, Westhampton Beach, N. Y.; D. M. Anderson, Randall, Ia.; Richard Oke, London, Can.; E. L. Andrews, Fall River, Mass.; T. G. Miller, Quincy, Mass. Chairman of Executive Committee, John A. Gough.

Advisory Board—Miss Isadore Eugenia Ives, Branford, Conn.; Dr. N. P. Whitmore, Gardner, Ill.; F. L. Holcomb, Meriden, Conn.; Leontine Lincoln, Jr., Fall River, Mass.; Charles H. Brown, Meriden, Conn.; George R. Conner, Auburn, N. Y.; Seth Borden, Fall River, Mass.; Will J. Kelly, Cambridge Springs, Pa.; Mrs. Bertha M. Story, Oregon City, Ore.; Geo. W. Reviere, South Braintree, Mass.; J. W. Johnson, Bradford, Pa.

We have just issued for 1909 one of the finest club catalogues ever put out by any specialty club, a copy of which should be in the hands of every breeder or lover of the Polish fowl.

Our club is growing at a rapid rate, and if not a member you should send a dollar and become one at once. We received fifty-four new members the past year. If interested you should send at once for club catalogue (enclosing stamp), which can be obtained by addressing M. V. Caldwell, Lisbon, O., secretary and treasurer, or George W. Trent, Wilmette, Ill., assistant secretary.

THE BUFF ROCK CLUB.

The annual meeting of the American Buff Plymouth Rock Club was held at Greenville, S. C., January 14, 1909. The following officers were elected for the ensuing year:

Executive Committee—C. W. Fowler, president, Smyrna, Ga.; Dr. C. W. Coddige, Bristol, N. H.; H. P. Mason, Fayette, Mo.; John W. Poley, Royersford, Pa.; Wm. A. Stolls, secretary-treasurer, Indianapolis, Ind.

District Vice Presidents—Central, John L. Waddell, Decatur, Ill.; Southwestern, Thos. B. Elliott, St. Louis, Mo.; Eastern, F. G. Bean, Collegeville, Pa.; New England, E. A. Willis, Brockton, Mass.; Southern, C. T. Fallin, Greenville, S. C.; Northwestern, Peter Hove, Stanhope, Ia.; Pacific Coast, D. J. Beinhart, Kennewick, Wash.

The club will continue publishing the Quarterly for the purpose of disseminating special information concerning Buff Rocks.

PARTRIDGE WYANDOTTE CLUB OF AMERICA.

Partridge Wyandotte Club at annual meetings held at Providence, R. I., and Boston, Mass., reelected for year of 1909 the officers of 1908. The club voted to hold its next annual club show at Boston, Mass. A large number of prizes will be open for competition and a good sum in money divided for cash prizes.

The following have been named as state directors: R. T. Hack, Gorham, Me.; O. H. Leavitt, Route 6, Box 181, Manchester, N. H.; J. J. Kraft, Burlington, Vt.; C. H. Brundage, Danbury, Conn.; J. F. Tallinger, Barnard, N. Y.; Thomas W. Schofield, Bell street, Bellville, N. J.; Bird Bros., Meyersdale, Pa.;

Dare You Throw Burning Coals On Your Roof?

Burning coals thrown on a roof of Ruberoid harmlessly sputter away—and die out.

They do not set fire to the Ruberoid. They do not set fire to the timbers underneath.

Yet a roof of Ruberoid is more than mere protection against fire.

It is protection against the cold of winter. Being a perfect non-conductor of heat, it keeps the warmth of the house in.

It is protection against the heat of summer. It keeps the building cool by keeping the sun's heat out.

Seventeen Years of Test

And it is more. It is wind proof, rain proof, snow proof. It resists acids, gases and fumes. Because of its great flexibility, it is proof against contraction, expansion and the twisting strains which every roof must bear.

A roof of Ruberoid is practically a one-piece roof.

For with every roll comes the Ruberine cement with which you seal the seams and edges—seal them against the weather and against leaks. You will find many roofings which look like Ruberoid—but none which wear like Ruberoid.

For the first buildings ever roofed with Ruberoid—more than seventeen years ago—are still waterproof and weathertight.

RUBEROID

(TRADEMARK REGISTERED)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

These buildings are the oldest roofed with any ready roofing. Ruberoid was by several years the first.

And of more than 300 substitute roofings on sale today, not one can employ the vital element which makes Ruberoid roofing what it is.

This vital element is Ruberoid gum—made by our own exclusive process.

It is this wonderful Ruberoid gum which gives Ruberoid roofing the life and flexibility to withstand seventeen years of wear where other roofings fray out in a few summers.

These substitute roofings are made to resemble only the uncolored Ruberoid.

Ruberoid can also be had in colors. It comes in attractive Red, Brown and Green—suitable for the finest home.

The color is not painted on. It is a part of the roofing. It does not wear off or fade.

Get This Free Book

Before deciding on any roofing for any purpose, get our free book which tells what we have learned in twenty years of tests about all kinds of roofing. This book is frank, fair and impartial.

It tells all about shingles, tin, tar, iron and ready roofings.

To get this book, address Dept. 77, The Standard Paint Company, 100 William Street, New York.

And all breeders of this variety not now members are earnestly invited to join the club. The club wishes to make this the banner year in its history.

Any information will be gladly furnished on application to undersigned.

H. R. Hildreth,
Secretary-Treasurer.

Worcester, Mass.

NATIONAL SILVER PENCILED WYANDOTTE CLUB.

After the Chicago show a few breeders of Silver Penciled Wyandottes seeing the necessity of a club for our breed organized the National Silver Penciled Wyandotte Club, with E. S. Carver, 1825 W. Main street, Ft. Wayne, Ind., as president, and James S. Wason, 30 Genesee avenue, Grand Rapids, Mich., as secretary and treasurer. We wish to get a state organization in every state with vice-president to look after his state and get as many members as possible. Initiation fee \$1. Annual dues \$1. We propose to have no two officers from the same state and follow the workings of the A. P. A. as far as possible. Every member will have his vote by mail on all questions.

James S. Wason,

Secretary and Treasurer.

Grand Rapids, Mich.

AMERICAN PLYMOUTH ROCK CLUB.

The fact that Illinois has a greater number of Barred Rock breeders than any other state in America appealed to those present at the Illinois State Show, January 7, 1909, that the time was ripe when every breeder in the state should be asked to become one of us so that we may unitedly keep the Barred Rock in the forefront of all Standard varieties, in the future as in the past. This we can with all confidence do, provided we can enroll the name of every breeder, no matter whether he breeds many or few. Join us; we can be of mutual help as well as instill new life into the national club. It takes work, skill and close study to produce quality Barred Rocks; no others are worth spending time on. As members of this organization through an annual catalogue we will give an exchange of views, up-to-date methods on

10 DAYS FREE TRIAL

We ship on approval, without a cash deposit, freight prepaid. **DON'T PAY A CENT** if you are not satisfied after using the bicycle 10 days.

DO NOT BUY a bicycle or a pair of tires from anyone at any price until you receive our latest art catalogs illustrating every kind of bicycle, and have learned our unheard of prices and marvelous new offers.

TIRES, Coaster-Brakes, Bulb-up-Wheels and all sundries at half usual prices.

HEAD CYCLE CO. Dept. T123 CHICAGO

The above are a pair of Single Comb Rhode Island Reds bred, owned and exhibited by Karl T. Brown, M. D., Crawfordsville, Ind. Note the long back and correct shape of the cockerel and pullet. Dr. Brown refused almost \$300.00 for this pair, and values them at \$500.00.

Are You Building ?

If so you will require some kind of roofing. Are you going to buy a roofing of quality or "extravagant claims"? You can find both kinds of roofing.

PAROID is a good old fashioned roofing of quality made by a firm established in 1817. PAROID will meet every requirement that a roofing will have to meet on your buildings. It is not affected by extreme heat or cold, water, snow or ice, and it resists fire.

To get the best results your poultry buildings should be dry and warm. PAROID is used by the most successful poultrymen because it keeps out cold drafts and extreme dampness. PAROID acts like a waterproof blanket on a building.

Paroid Roofing

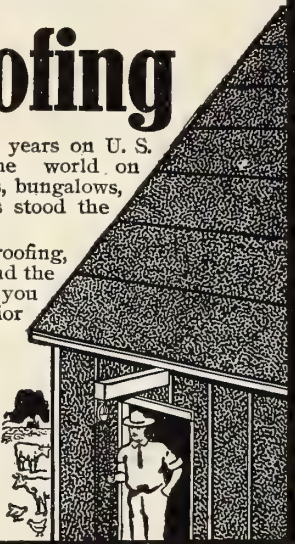

Proofs of PAROID'S Value.—Used for years on U. S. Government buildings, also throughout the world on poultry houses, farm buildings, mills, garages, bungalows, etc. It has always given satisfaction—it has stood the test of time.

PAROID ROOFING is not a low priced roofing, but the slight difference in cost between it and the cheaper roofings is in the quality. Any test you may make will prove that PAROID is a superior roofing.

OUR GUARANTEE: Buy one roll of Paroid, apply it to your roof. If you are not satisfied that you have the best roofing we will send you a check for the amount you paid for the roofing and the cost of applying it.

Write us and we will tell you more about the merits of PAROID ROOFING and send samples. Book of plans, "Practical Farm Buildings" free to poultrymen and farmers who are interested.

F. W. BIRD & SON, Established 1817.
183 MILL STREET, EAST WALPOLE, MASS.

all subjects pertaining to bringing this variety to greater perfection as well as maintaining their popularity.

We organized with twenty-one charter members and are adding others right along. The membership fee is \$1 annually, and this fee entitles you to compete for all premiums up to January 15, 1910.

If you are in the least interested in advertising in our next catalogue, or have a good illustration of your birds which would be of interest to other breeders, write me and I can make you an attractive proposition.

W. F. Black, Secretary-Treasurer.
Walnut, Ill.

WHITE PLYMOUTH ROCK CLUB.

An enthusiastic meeting of the White Plymouth Rock Club was held at the New York Show, Madison Square Garden, Wednesday, December 30, 1908. The election of executive officers resulted as follows:

President, Maurice F. Delano, Vineyard Haven, Mass.; secretary-treasurer, Chas. H. Ward, Bethel, Conn. Members of executive committee (at large), L. C. Bonfoey, Vernon, Conn.; Leslie Jefferis, Bridgeport, Pa.; Lyman H. Hill, Jackson, Mich.

Report of secretary-treasurer accepted subject to report of auditors. (Returned as correct.)

Considerable discussion as to untrue and misleading advertising resulted in the motion that all advertisers in club literature in future be requested to specify dates of their winnings. F. H. Davey, of Yonkers, N. Y., was elected as club representative for White Plymouth Rocks on the A. P. A. Standard revision committee. The club is in a good healthy condition, with a rapidly growing membership of over 400 active members. Not a stick of dead wood.

All breeders of White Rocks are invited to join the club. For further par-

BLACK ORPINGTON CLUB CATALOGUE READY.

The 1909 catalogue of the National S. C. Black Orpington Club is now ready to mail and members whose dues are paid up will get a copy free. A charge of 10 cents will be made to non-members for the catalogue.

The catalogue will contain announcement of the donation of 100 gold medals and many cups and diplomas for winners at the coming year's shows.

The catalogue also contains strong articles on Orpington type, color, etc., and an account of how one man made a living for three people from a single pair of fowls.

All breeders of blacks should at once join the club. Fee \$1 for membership. All interested in the Black Orpington should send 10 cents for the club catalogue. Milton W. Brown, Secretary. Sta. L, Cincinnati, O.

AMERICAN COLUMBIAN PLYMOUTH ROCK CLUB.

A well attended meeting of the American Columbian Plymouth Rock Club was held at Madison Square Garden Thursday afternoon, December 31, 1908, and the following officers re-elected: President, D. M. Green, 122 James street, Syracuse, N. Y.; vice-president, F. M. Clemans, Mechanicsburg, O.; secretary-treasurer, E. B. Andrews, 9 West 17th street, New York City.

Matters of much interest to the club were freely discussed and acted upon and several new names added to our membership. Much enthusiasm was shown and a very bright future predicted for both the variety and the club, based on the rapid strides Columbian Rocks are making in popular favor and the splendid progress of the club since its organization a year ago. Every member present will say it was good to have been there.

The club expects to double its membership during the year and to this end we would like to hear from everyone interested in this variety.

E. B. Andrews, Sec'y-Treas.,
9 West 17th St., New York.

THE AMERICAN PLYMOUTH ROCK CLUB.

I would like just a few lines for the club, which represents the most popular variety of fancy or utility fowls in America, if we can trust, as trust we must, the record of the exhibitors in the United States and British provinces during the season of 1907-8. Possibly this club has the largest list of names on its role of any, and it is desired that every one on this list take measures to see that his name is on the actual list that is in good standing.

I find that the impression has gone abroad that this club is doing little to further the interests of Barred Plymouth Rocks. That there be no misunderstanding let me state two things that has been done the past season. It has offered ribbons at nearly 100 shows and many of them have been delivered. The remainder will be delivered just as soon as the

YOU DON'T PAY A CENT!

If Conkey's Roup Cure fails it costs you nothing, for it is guaranteed to cure even the advanced stages of Roup. If the results are not satisfactory, simply return the empty box and back comes your money!

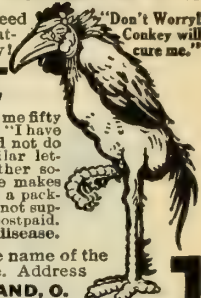

Conkey's ROUP CURE

A powder that is given in the drinking water. It acts as a preventive and is a fine tonic. A germ killer that is absolutely harmless to fowls.

Save your sick fowls! Prevent the ravages of Roup! Protect your profits! It's the original and only successful Roup Cure. Used all over the world. Saves poultry raisers thousands of dollars every year. One man writes: "I believe that

every 50-cent package I buy saves me fifty dollars in birds." Another says: "I have used it for six years and would not do without it." Hundreds of similar letters prove its superiority to other so-called cures. A 50-cent package makes 25 gallons of medicine! Get a package at your dealer's, or if he cannot supply you, we will! Large size \$1, postpaid. We make a remedy for each disease.

THE CONKEY BOOK (Price 25c) Sent FREE if you give us the name of the man from whom you buy your poultry supplies. Enclose 4c postage. Address

Rausch's Barred Rocks

won at the great St. Louis show November 23-28, 1908, first and second cocks, second hen, third cockerel, second cockerel, second pullet, no pens shown. Eggs \$3.00 per 15 straight. All my prize winners in my yards. In writing mention this paper.

Creve Coeur Poultry Farm, Louis Rausch, Proprietor Box 57, Creve Coeur, Missouri

official reports are made to the secretary. It has, also, offered cups in every state where there are ten members paid up in full. These will be delivered in good time.

The members who attended the meeting

at Boston were earnest and businesslike in conducting the proceedings. Active, earnest workers were elected to fill each and every office. The list of officers for 1909 follow:

President, C. H. Welles, Stratford,

Conn.; vice-presidents, M. W. Baldwin, Dr. O. P. Bennett, B. S. Davis, W. F. Potterall, M. S. Gardner, C. H. Latham and J. F. Anderson, Seattle, Wash., superintendent of poultry at the Alaska-Yukon Exposition; secretary-treasurer, A. C. Smith.

It was voted to drop all members two years in arrears from membership after thirty days' notice.

The treasurer's report showed that the club had money enough to pay all its bills and a small balance.

It was voted that, hereafter, a show must have at least three members competing to be allowed the club ribbons, and each state must have at least twenty members to be eligible to one of the club's cups.

The matter of a club catalogue was brought up, and it was the sentiment of the meeting that a club catalogue was needed and that one be issued, provided that enough advertising can be procured to pay the expense of printing and posting. This catalogue if issued will be sent to members free, but will be sold at a price to non-members. A club quarterly may be issued on the same general plan. Those who want advertisements in either are invited to correspond with the secretary.

It was voted to donate a \$25 silver loving cup to the Alaska-Yukon Exposition, to be awarded for the best cock, hen, cockerel and pullet shown by a member of the club in good standing.

All breeders of Barred Plymouth Rocks are invited to join the club. Membership fee and dues \$1 a year.

All members in arrears are particularly invited to "pay up."

A. C. Smith, Secretary-Treasurer.

HARRY MORTON - : - Howell, New York

day evening, March 1. The following officers for the year were elected:

President, F. H. Pardee; vice-president, J. D. Grover; secretary-treasurer, R. F. Talbot. Board of directors: W. E. Decker, F. W. Shaw, David Pugh, C. D. Burch, F. H. Pardee, R. F. Talbot. Judge, John D. Jaquins.

Plans are now being formed for the fourth annual exhibition, which will be held at New Berlin, N. Y. The dates are January 24-28, 1910. The association has always met every obligation and paid all premiums in full. Our fourth exhibition promises to eclipse all previous records and fanciers will do well to plan and be with us January 24-28, 1910. For further information address the secretary, R. F. Talbot, New Berlin, N. Y.

RHODE ISLAND RED CLUB OF AMERICA.

The annual meeting of the Rhode Island Red Club of America was held at Madison Square Garden, New York, December 31, 1908, at 2 p. m., with sixty members present.

The officers elected for the ensuing year were: President, Robt. C. Tuttle, Hartford, Conn.; vice-president, Irving A. Sibley, South Bend, Ind.; secretary-treasurer, George P. Coffin, Freeport, Me. Executive committee: Lester Tompkins, Concord, Mass.; Geo. W. Tracey, Hatboro, Penna.; Reese V. Hicks, Topeka, Kan.; Hon. C. M. Bryant, Boston, Mass.; I. L. Whitmyre, Schenectady, N. Y.; D. W. Rich, Mt. Pleasant, Ia.; W. P. Craig, Pittsburg, Pa.; A. U. Dilley, Wrentham, Mass.; M. M. Offutt, Cleburne, Tex. Election commissioner, Sinclair Smith, New York, N. Y.

It was voted that in the future the election of officers and selection of place of meeting be done by mail ballot under same rules as the A. P. A. elections.

The Standard was discussed and it was voted unanimously that the A. P. A. revision committee be advised that the club desires no change in the present Standard for color or shape as published in Red Hen Tales.

The report of the secretary-treasurer showed the club to be in a healthy condition; 545 new members joined the club during 1908. All members whose dues

for 1908 were not paid were dropped from membership, leaving a total paid membership of 1,328, representing forty-eight states and five foreign countries, so that today the club is the strongest specialty poultry organization in the world with the largest paid membership.

Island Reds on exhibition, indicates the widespread popularity of this famous breed.

The 1909 edition of Red Hen Tales has just come from the press and will be in great demand by all who are interested in Rhode Island Reds. The

The above reproduction is that of my first prize pullet at the National Fanciers and Breeders' Association Show, at Chicago, January, 1908. She is a marvel in shape, neat, small comb, deep bay eye and solid even color. She has moulted in the same as a hen and will be bred in my first pen this season. Bred and owned by S. D. Lapham, Dearborn Poultry Yards, Box A, Dearborn, Mich.

The present show season the club has offered forty-eight state cups in thirty-two states, sixteen states having two cups each and sixteen having one cup. Sets of eight club badges were offered at 250 shows and \$150 in cash specials at New York, Kansas City and Washington.

The reports from the shows, with a large increase in the number of Rhode

price of the book to non-members is 25 cents a copy postpaid. Membership in the club is \$1 per year.

Geo. P. Coffin, Secretary.

BABY CHICKS

How can I do this? Simply because I make chicks a specialty—hatching thousands at a time in the largest exclusive chick hatchery in the world. My stock has won honors where competition is the hottest—at New York, Chicago, Boston, Cincinnati, Springfield, Fort Wayne, Indianapolis, etc.—they will win and make money for you. No specialty farm produces a cleaner, purer strain—no birds get better care than mine. Chicks or breeding stock for sale in either White Rocks, White Wyandottes, Barred Rocks or S. C. White Leghorns—all raised on my own large poultry farm. Do not ask for other varieties.

Why Buy Chicks

Day old chicks are easily shipped almost any distance, as they require no feed for several hours after hatching. They are lighter than eggs, more easily handled when packed in my special shipping cases and are cheaper, safer, surer than the ordinary incubator chick every time. **Shipping them does not affect them in the least.** Read in the next column what customers say who have bought my chicks. I have hundreds of such letters on file. Isn't this pretty good proof of their superiority?

Proofs of Merit

"I now have 48 of the finest chicks anyone could wish for from the shipment of 50 sent me two months ago.

They are excellently marked—far better than I had hoped for." A. S. Dudley, Scranton, Penna.

"The chicks arrived the evening of the 1st of July in fine condition. We thank you for your prompt attention, also for the extra chicks."

Jno. P. Cowher, Philipsburg, Pa.

"The chicks I purchased of you have matured into as fine birds as I have ever seen. Your prices are higher than some others, but your chicks are worth several times more." B. C. P., Ft. Wayne, Ind.

Why My Chicks Pay

My guarantee covers a full count and safe arrival in first class condition at your nearest express office.

Hatched from my own high scoring breeding stock eggs, these little chicks of quality come to you at a price much cheaper than you can hatch them yourself.

Send now for my interesting catalog descriptive of my stock, prices and of high class chicks we are now booking orders on for early spring delivery. A postal will do; but send it today.

L. YARIAN, Box 26A LIMA, O.

THE AMERICAN HOUDAN CLUB.

The annual meeting of the American Houdan Club was held in Mechanic's Hall, Boston, Mass., January 15, 1909, in connection with the Boston Poultry Show. Matters of interest to the members of the club and to all Houdan breeders were discussed. It was decided

Arrangements were made for offering state cups and ribbons to be competed for by the club members.

The following officers were elected: President, John T. Heizer, Columbus, O.; vice-president, James Abernethy, West Pembroke, Me.; secretary-treasurer, Daniel P. Shove, Fall River, Mass. Executive committee: E. L. Smith, Spring-

Further information regarding the club and its objects will gladly be given by the secretary or any of the officers.

NOTICE TO ALL LOVERS OF BUFF WYANDOTTES.

The American Buff Wyandotte Club has published the finest annual catalogue ever issued by any specialty club. It will be sent free to all who ask for it and send 6 cents in stamps for mailing and postage. No breeder of Buff Wyandottes can afford to be without this book. It contains a standard for the breed and standard cuts to show what Buff Wyandottes should be like. The club has spent a lot of money for this book and it is yours for the asking.

We desire to get in touch with every breeder of Buff Wyandottes in the world and ask that lovers of this fine breed join the club and help us push it to the front. As a special inducement for breeders to join the club at this time we will give a fully paid up membership from now to October 1, 1910, for \$1.

The club is growing rapidly and now is the time to join us in our efforts to advance the interests of the breed. No true fancier of Buff Wyandottes will remain outside of the club. Join now, do not delay.

For all information, application blanks, catalogues, etc., apply to Henry R. Ingalls, Secretary, Greenville, N. Y.

PANA POULTRY ASSOCIATION.

The Pana Poultry Association will hold their third annual show at Pana, Ill., December 14-18, 1909. Judge, Ben S. Myers.

At the recent meeting of the association the following officers were elected:

President, J. Edgar Turner, Pana, Ill.; vice-president, M. J. Cavanaugh, Pana, Ill.; secretary, James A. Bickerdike, Milledgeville, Ill.; treasurer, J. J. Pierpoint, Pana, Ill.; superintendent, E. F. Karls, Tower Hill, Ill.

Pana and vicinity is rapidly becoming a poultry center. A very successful show was held last January, with double the business and interest of the first show held a year ago.

The officers are all real fanciers and men of judgment and ability. A great show for next season is already assured. Put Pana on your show list and remember the date, December 14-18, 1909.

J. A. Bickerdike, Secretary.

THE NATIONAL DARK BRAHMA CLUB.

The organization has been completed. Substantial donations by the members make possible good cash prizes and silver cups at the largest shows, while the club will offer handsome ribbons at every show where one or more members exhibit. Work has begun on the club catalogue, which will be issued soon. Every breeder and fancier of Dark Brahmas is urgently requested to join and help in the promotion of this splendid variety.

The officers elected are: President, Philander Williams, Taunton, Mass.; vice-president, Dr. S. Lott, Bellona, N. Y.; secretary-treasurer, J. H. Ladd, Chillicothe, Ill. Executive committee: Arthur H. Leach, Box 112, Middleboro, Mass.; J. A. Zollinger, Goshen, Ind.; Elliot Marshall, 1617 Faraan street, St. Joseph, Mo.; C. Donald Gay, Camp Point, Ill.; C. M. Atwood, Dundee, Minn.

First New York hen, for which one thousand actual dollars were refused, and no doubt the grandest Barred Rock female ever produced.

that a club catalogue should be issued, and all Houdan breeders not already members of the club are urged to join at once and have their names in the list of members to be published in the catalogue.

field, Mass.; C. E. Arnold, Babylon, L. I., N. Y.; John Baber, Lawson, Mo.

The American Houdan Club was organized in 1898 and has no connection with any other organization that bears the name of the Houdan.

**Calico House-dresses**

Charming inexpensive gowns made of Simpson-Eddystone Silver Grey cotton prints are worn by thousands of women to-day. The fast color, beautiful designs and fine fabrics have made these dress-goods the standard for over 65 years.

Some designs with a new silk finish.

Ask your dealer for Simpson-Eddystone Prints. If he hasn't them write us his name. We'll help him supply you. Don't accept substitutes and imitations.

EGGS ONE CENT A DOZEN

EDGAR WARREN,

ATKINSON, N. H.

Eggs may be laid down by methods described in my book, "Preserving Eggs—the Why and How," at a cost not exceeding one cent a dozen. The book is the outcome of the author's experiments and of correspondence with leading authorities in the United States, Canada and Europe. Formulas absolutely reliable. No risk, no trouble, no stale taste. Why not lay down the family supply when eggs are cheap and save one-half the cost next winter? Why sell your eggs at a nominal price when in six months you can get an advance of 100 per cent? Price 50 cents. Circular free.

McClave's Barred Plymouth Rocks

JOHN S. MARTIN

Box 51 : : : Port Dover, Canada

A GREAT POULTRY AND SEED CORN FARM.

I have recently sold my entire flock and good will of Rose Comb R. I. Reds to F. Gage Cutler & Co., of Carthage, Ill., as I will breed S. C. Reds exclusively, and would ask anyone interested in fine poultry and seed corn to send to them for their fine catalogue which they advertise for a stamp or names of a few others interested in better poultry. They are making a specialty of bred-to-lay-and-win White Barred and Buff Rocks, White and Columbian Wyandottes, Black Langshans, Rose and Single Comb R. I. Reds, Orpingtons and Leghorns, but have a few pens of all the leading breeds of chickens. Five breeds of turkeys and several of ducks.

Their White Rocks are something great, their first pen being headed by their \$1,000 cockerel "Prince Wonderful." Not a bird in the pen but what will score up well, and all being from a very heavy laying strain. Their Barred and Buff Rocks and other breeds are not far behind. They claim many egg records from 225 to 293 eggs per year, many of their records being made by the Rocks, Wyandottes, Langshans and Reds. Their bronze turkeys won this year at Madison Square Garden and their ducks at leading shows.

Very respectfully,

Judge C. W. Zimmer.

Fort Wayne, Ind.

SEND FOR THIS BOOK.

All of our readers who are thinking of buying anything in the buggy or harness line should write the Elkhart Carriage & Harness Manufacturing Company at Elkhart, Ind., and ask for one of their 1909 catalogues. It is an interesting book and will certainly be the means of saving you some money on your purchases, because they sell direct to the user at factory prices—which means the actual cost of the material and making plus their small profit. For thirty-six years this company has sold on the direct-to-the-user plan. Their success has been wonderful, but it only goes to show that honest goods and honest prices are always appreciated. Our readers are as safe in doing business with the Elkhart Carriage & Harness Manufacturing Company as with their own bank, for they are absolutely reliable and will positively do just what they say they will. They ship for full examination and approval, and you are nothing out if not satisfied as to style, quality and price. They also have a large line of pony vehicles and harness and one of the best motor buggies on the market. Send for one of their books before you buy elsewhere anyway.

The catalogue of Cole & Gunsett, Van Wert, Ohio, proprietors of Orchard View Poultry Farm, where they breed Buff and Barred Rocks and White Wyandottes. They advertise them "Bred As They Should Be," and we think they have the quality and know how to do this. Their catalogue contains a large illustration of their Buff Rock cock "Buster," an exceptionally fine bird that heads their best pen. They give some valuable remedies for treating different diseases of poultry. This catalogue is free for the asking.

C. W. Zimmer visits J. R. Purkey, Bloomdale, Ohio, breeder of White, Buff and Barred Rocks. Mr. Purkey is an old and successful breeder and is particularly strong in White Rocks, having won nearly every premium competed for in several years. He is prepared to furnish you eggs from good stock at live-and-let, live prices. He now has a fine bunch of early chicks and will have them well matured and ready for the fall fairs. He has incubator eggs from good stock. See his ad in this issue.

Charles Nixon, Washington, N. J., proprietor Mapleside Poultry Yards, has just issued a very neat and attractive catalogue, which gives a great deal of valuable information about his prize-winning White Wyandottes together with a number of illustrations of his New York winners. This book should be in the hands of everyone who is interested in White Wyandottes, and we would advise you to send for one today. Mention American Poultry Journal.

THE MANDY LEE POULTRY FARM.

By Frank B. White.

A few minutes over a good road in Mr. Lee's big touring car brought us to the Mandy Lee Poultry Farm, which is operated by Mr. George H. Lee, president of the George H. Lee Co., Omaha.

This farm is conducted for fun and profit. All his life Mr. Lee has been an enthusiastic poultryman and there is no branch of the business from which he gets more enjoyment than the supervision of his chicken farm.

In addition to being a source of enjoyment, however, the farm is also a source of revenue.

"After removing my business to Omaha

George H. Lee.

ten years ago," said Mr. Lee, "it was necessary for me to abandon temporarily the raising of poultry, but after the lapse of a few years I sort of got disgusted with an impression on the part of some people that Lee's chicken talk was theory and not practice, so I decided to start a poultry farm that would not only be a money-maker but also a show place for those going into the business.

"I have often expressed the opinion that a poultry farm of any size could be successfully and profitably operated if capital, facilities and the attention were in propor-

tion to the magnitude of the business. The person who starts in to handle five thousand chickens without really knowing how to properly care for a hundred is quite as certainly foredoomed to failure as is the one who tries to crowd a thousand chickens into quarters properly fitted for the accommodation of a couple of hundred. Crowding, inexperience and working beyond the capital at hand are the three great causes of failure in poultry work."

Mr. Lee has made a life study of poultry

The Brooder Houses.

raising and is familiar with every detail of the industry and everything on the farm—every method in vogue there—shows clearly the practical, technical knowledge of the "master hand at the helm." Poultry raising on a large scale is something we often read about, but here is an opportunity to see it worked out successfully, and a visit to the farm is an education in every sense of the word.

Here one has an opportunity to study poultry raising in every detail. Their laying houses have a capacity of 2,500 hens, and more in course of construction; a brooder house, an incubator cellar, and any number of outdoor fireless brooders, indi-

A Flock of White Leghorns.

cates great activity on the "farm" during the breeding season. All branches of the business are considered: Eggs and stock are sold in season at fancy figures; day-old chicks are shipped to all parts of the country; surplus and inferior stock are quickly fattened and sent to market, and there is a constant demand for all the eggs for table

use the farm can produce. And Mr. Lee tells us this is the object of the enterprise—to demonstrate that with proper care and management the poultry business is a success, financially and otherwise.

Mr. Lee's poultry farm is located a few miles north of Omaha, convenient to city street car transportation. He breeds principally White Leghorns.

CHARCOAL FOR POULTRY.

It may be that you do not realize how important it is that you should always have charcoal on hand with which to feed your fowls. The great value of charcoal lies in its preventative powers. It is one of the greatest preventatives for the various diseases fowls fall heir to; it is a natural purifier; an absorbent of odors, gases, acids, etc. It keeps poultry in a healthy condition, which means better results and bigger profits.

Numerous poultry keepers feed charcoal constantly to their fowls of all ages. If you are keeping your fowls healthy, you are producing strong, vigorous chicks; a satisfactory supply of eggs,

A View of Mr. Lee's Farm.

and a successful poultry business. The use of charcoal will accomplish all of this and more. The best charcoal is that prepared especially for the use of poultry by one who understands how to do it right.

We call the attention of our readers to the advertisement of Thomas Brothers Company, 1227 Beach street, Philadelphia, in this issue. They will be pleased to send their booklets, "The Value of Charcoal," and "Why Fowls Need Charcoal," also generous samples free of charge to all writing for them. You should take advantage of this offer.

Frank Sissons, Workop, Notts, England, the noted English breeder of Orpingtons, reports that he has just made a shipment of a pen of Buffs to this country and has orders for a great many settings of eggs from this side of the "pond." Better write him for full particulars about his stock. See his ad in this issue.

ORPINGTONS

BUFF, BLACK AND WHITE

I won more prizes on Orpingtons at 1908 Chicago Shows than any other exhibitor. My matings closely approach perfection and finer eggs have never been offered by any Orpington breeder anywhere. There's something novel in my mating list for 1909. Sit down right where you are and order a copy. Prompt attention to all inquiries and orders.

**C. W. ZIMMER, REPRESENTING
AMERICAN POULTRY JOURNAL,
VISITS THE YARIAN POULTRY
COMPANY'S DAY-OLD-CHICK
PLANT AT LIMA, OHIO.**

We were prepared to see a large plant before we visited the Yarian plant, as we had seen cuts of it, but one can not comprehend the immensity of it until he actually sees it. The plant is equipped throughout with every modern appliance that is known to the business. Everything is handled systematically and on a large scale. Mr. Yarian gives every detail his personal attention. We found everything going full blast and orders coming in at a great rate. A carload of large size incubators has just been ordered to take care of increasing business. Many orders being booked ahead for future delivery. They make a specialty of Baby Chicks from the following varieties: S. C. White Leghorns, White Wyandottes, White and Barred Rocks. Their breeding stock is all housed on the colony house plan and every pen has a large grass run. Many prize winners are to be found in their breeding pens, particular attention being given to the quality of their breeders and to mating them to produce good quality. They guarantee safe arrival and full count. They have a very interesting catalogue, giving prices, etc., of their high class chicks. It is free for the asking. Address, Yarian Poultry Company, Box 26A, Lima, Ohio. See ad elsewhere.

**LET THE CHICKS BE THEIR OWN
DOCTOR.**

Among the new equipment put on the market for poultry raisers this year it is doubtful if any other one article will attract so much attention as the automatic greaser, which is being manufactured in Flint, Mich. Those of our readers who have experienced the difficulty and inconvenience of greasing the necks and heads of chicks to kill lice, fleas, mites and red bugs will appreciate this automatic contrivance which accomplishes the work without any disagreeable attention on the part of the poultry raiser.

This automatic greaser is made up of a round feed pan in the center of which is an oil tank with an overhanging top the same size as the feed pan. Around the lower edge of the top runs a wick which is constantly fed with oil from the tank. The chicks when feeding cannot avoid rubbing their heads and necks against this wick, all vermin thus being killed and the chicks kept free from sore head. It is said the cost of oil for this wonderfully effective greaser is not more than five cents a week. For full information about the Automatic Greaser and other automatic supplies, our readers should write to the Automatic Hatching Company, 10 State street, Flint, Mich.

**J. COY ROACH, GIRARD, ILL.,
BREEDER AND IMPORTER OF
CORNISH INDIAN GAMES.**

Mr. Roach has made several importations from England and has paid liberally to get the best Cornish obtainable. That he has them is conclusive when we tell you he won at Chicago 1-2-5 pullet, 2-3-4-5 cockerel, 1-2-5 pullet, 1 pen, and \$25 gold special for best display. Mr. Roach also won every first and second at Illinois State Show. He has males weighing 11 pounds with grand station and color. His females are also large size and fine in shape and color. He has stock and eggs for sale. You will do well to write Mr. Roach before placing your order. His ad. appears in this issue of American Poultry Journal.

Will Welch, Lock Box 68, Montpelier, Ohio, breeder of Partridge Wyandottes, is offering a limited number of settings of eggs, a special mating headed by the first prize cock at Edon, Ohio. This bird is mated to females scoring 92 to 93%. His birds are bred to lay and to win, and it is not a question of quantity but quality with him. He has one extra choice cockerel to spare. Write him for full particulars and mention American Poultry Journal.

MOTHER HEN SCORES A TRIUMPH.

All prospects indicate an active year among poultry raisers. The Mother Hen Brooder continues its record of success and the manufacturers write us they are especially pleased with the heavy sales they are making to poultry raisers who already own one or more Mother Hen Brooders and who are adding more to their equipment this season. These records, coming in every day, are the best evidence of the worth of this brooder. The rapidly growing popularity of the Mother Hen Brooder is not surprising to anyone who has studied its construction and watched its results on poultry farms. It gets its name from the fact that it hovers the chicks just like a real mother hen, with the required warmth on the backs of the chicks. In this brooder, which is an adjustable suspension brooder that can be raised as the chickens grow larger, the heat is derived from a circulating hot water or hot air system and transmitted to the backs of the chickens by folds or curtains of soft flannel. The Mother Hen is used exclusively by many of the largest poultry raisers in the country, from all of whom come reports of the extraordinary efficiency of this brooder. Any of our readers would do well to write to the Automatic Hatching Company, 10 State street, Flint, Mich., for further information about the Mother Hen Brooder.

Mr. Red Man,

Anywhere, in America.

Friend: I give you greeting and would say that I have yet for sale a few Rhode Island Reds whose room I now need more than I do the birds. So, will make some bargains in Rose and Single Comb pairs, trios, pens at \$10, \$15, \$25 and up. This includes some fine big R. C. cock birds and sons and daughters of Chicago King and other good birds, also some S. C. yearling females that were last year in some of my best pens. Fine males at \$5, \$10, \$15 and \$25; females, \$2, \$3, \$5, \$7 and \$10. Don't stop to inquire, as it is getting late. Just ask me to ship whatever you want, a \$10 cockerel, a \$25 trio, etc. If shipment doesn't suit, return it at once and get your money back. That is the Cornish way. See display ad.

Fraternal yours,
Cornish, of Edwardsburg (Michigan).

H. Burkholder, Clyde, Ohio, breeder of Barred Rocks, has been breeding Barred Rocks for the past twelve years and has produced many winners, having won at Toledo and Tiffin shows several times and at many fairs. At Tiffin, Ohio, 1907, he won first and second pullet, third cockerel, first pen. At same show, 1908, he won first cockerel, first pen, "ten best Barred Rocks," second and third pullet, losing two ties by overweight. He has some fine pens mated for the egg trade, one pen, a cockerel mating, being exceptionally fine. Mr. Burkholder also has a free range utility flock which he has been

breeding for large size, and he certainly has the largest Rocks in this flock we ever saw. You will find his ad in this issue.

Lakewood Farm Company, Lakewood, N. J., has just issued one of the most up-to-date and unique books that it has ever been our pleasure to read. The title of this book is "Poultry Profit Pointers." The name is very appropriate, as it is certainly full, from cover to cover, of

ested or not. It will help your digestion. Mention American Poultry Journal.

Phil Farren, Columbia City, Ind., breeds some fine Golden and Partridge Wyandottes. At Indianapolis, 1908, he won first cock, second hen, third pullet on five entries. The judge remarked it was the best class of Golden Wyandottes he ever handled. At Huntington, Ind., this year Mr. Farren won first, third cockerel, first cock, second and third hen, second,

valuable pointers on the poultry industry, and tells just how this great farm has made the wonderful success it has. This book is nothing like the usual catalogues issued, but a book that holds the attention of the reader from the beginning to the end. It is original and gotten up in a manner that all can understand what is being talked about. Send for a copy to-day, no matter whether you are inter-

third and fourth pullet, first and second pen. We saw many fine specimens; one hen that won first at Indianapolis, a pullet being particularly fine. Mr. Farren also has a very fine special pen of Partridge Wyandottes. The cockerel being a typical Wyandotte in shape and fine in color. Mr. Farren is anxious to hear from you. His ad appears in this issue.

WHITE PLYMOUTH ROCKS

First Cockerel at Boston, 1909

IT HAS BEEN no secret to White Rock breeders that it has been my ambition to breed better White Rocks than any other man on earth. I have been working and planning for years to reach this position. I believe that my record proves that I have now reached that goal. To support my title to supremacy, I don't offer an empty husk about my grand blood lines or indefinite claims as to what others have won on my stock, but the strong meat of one hundred recent victories, won in my own name, where the battle was the fiercest and at such shows as Boston, New York, Hagerstown, Hartford, Springfield, etc. For instance:

MY GREAT VICTORY AT BOSTON, 1908

where I won seventeen regular and special prizes, was made entirely on birds that I bred and raised. This probably is the best record ever made by any White Rock breeder on birds exclusively from his own flock. I have tabulated these winnings and other facts about the eggs, records and utility qualities of my flock in a brief catalogue that I want every White Rock breeder to have. Remember, I have no other varieties and no other business. Your inquiry will receive my personal attention and my best efforts. Eggs from regular \$5 per 13.

M. L. CHAPMAN

WETHERSFIELD, CONNECTICUT

Wyandottes : R. I. Reds : Orpingtons

April Time is Fine Chicken Time Says Johnson

Don't wait a day longer. I'll start you right and start you quick to making the money. Send your name and get

my "big letter" telling how. That's what I always call my Big Free Poultry Book and Old Trusty Incubator Catalog. I wrote it myself, as ever, and took many of the new photographs too. Over 200 pages this year, and over 1,200 pictures, most of them new, so you'll be bound to be interested whether you got my last year's book or not. Thousands of users of Old Trusties have written me again, and sent in helpful advice to chicken raisers, and photographs of results of their big hatches and broods of broilers with

Old Trusty— Incubators and Brooders

Old Trusty practically runs itself. Over 100,000 are being used everywhere. But Old Trusty this year is better than ever—more convenient and more handsome. No charge for the improvements. I use the same California Redwood and the finely finished metal encasing too. Old Trusty is certain and sure. Simple and easy to run. "Stands without hitching" and "hatches without watching" like you have to do with some others.

**Sent to You Promptly on
40, 60 or 90 Days Trial**

10 Year Guarantee—75% Better Hatches Guaranteed

Don't pay two prices. Look up the facts about Old Trusty which is way past the "experimental" stage these last six years and you can read why and all about me and my 100,000 customers and friends in my Free Poultry Book—before your order. My price is lower to you this year—below \$10 complete—freight paid east of the Rockies, and no worry about it.

Let me write you personally and tell you my price to you and send you my Big New 1909 Poultry Book Free. Will you? Write me—

M. M. Johnson, Incubator Man
Clay Center, Nebraska

**C. W. ZIMMER, REPRESENTING
THE AMERICAN POULTRY JOURNAL,
VISITS THE CAREY, OHIO,
FARM OF THE FIRM OF BROWN
& COLEMAN.**

It was March 15 that we visited the Orpington breeding plant of Messrs. Brown & Coleman, whose advertisement appears in this issue.

There were several things that impress one as being strikingly characteristic about the Brown & Coleman farms (of which there are now four, two in Ohio, one in Oklahoma and one in Texas), and one of these things was the atmosphere of business. Many orders booked ahead and many being received daily.

The plant is far from being a show place in respect of superlatively fine fit-

Prize-winning Black Orpington Female. Owned by Brown & Coleman, Sta. L. Cincinnati, O.

tings. None of the electric lighting and electric bells and the like that one sees in some of the eastern farms. Everything was of the simplest so far as buildings and fittings are concerned.

Three rules are absolutely insisted upon—the birds must be clean, healthy and happy. Nothing has been spared to accomplish these ends. It is doubtful if a louse could be found on the place. The most minute care is taken to have the place absolutely clean.

The health of the birds is maintained by causing the birds to take much exercise in securing their food—deep litter and other devices to cause the birds to work for their living. Then the variety of the food given was very great.

The birds themselves were a revelation to one who has not seen the best of the imported Buffs and Whites. Some of the best of these latter were quite equal in shape to the Blacks, short of shank and broad of back and of deep keel.

We had always understood that the English Buffs were much darker than the American Buffs, but the birds we saw

Prize-winning Black Orpington Female. Owned by Brown & Coleman, Sta. L. Cincinnati, O.

here were not at all darker than the best American bred birds.

We must call particular attention to one remarkable hen—"Snow Lady"—that will certainly make a great sensation when she is put in the show room. This bird is as good in shape as any Black we have seen, and her color was certainly as pure a white as one could well imagine.

In Buffs one cockerel struck us particularly as being about ideal in shape for he was as cobby and short of shank

as he need be, far in advance of what most American breeders have been able to produce in that direction.

In Buffs and Blacks most of the birds were imported by Messrs. Brown & Coleman, although some were raised by them.

An interesting bit of gossip was told us regarding the history of the Buffs and Whites now in the breeding yards at the Brown & Coleman farms.

Two years ago Mr. Milton Brown entered some seventeen entries of Buffs and Whites at the Cincinnati show. On these entries every entry won a prize and one cock won two specials, including best in show and color special.

Another competitor was Mr. C. E. Littell, who won ten prizes.

The following year Mr. Littell very greatly strengthened his string of birds, scouring the country for the best to be had. Mr. Brown, knowing that he had a proposition on his hands, did the same, searching England and Canada as well for fine specimens to enter at the same show.

Just before the show Mr. Littell's business called him to move to Oregon and he was forced to sell all his birds, both the winners of the previous year and the magnificent birds he had bought to enter at Cincinnati and New York.

They Buy Littell's Buffs.

Mr. Brown bought every one of these birds and added them to the Brown &

Prize-winning Black Orpington Female. Owned by Brown & Coleman, Sta. L, Cincinnati, O.

Coleman flock. Thus the two strings of birds each secured to beat the other are now united. Neither flock was shown at

any show this year, owing to the changes in business relationship.

The Blacks are the birds that have the greatest demand on the Brown & Coleman farms. It is hard to keep on hand a sufficient number of breeders to supply the egg trade and for their own use.

The flock of Blacks was made famous by the remarkable number of winners at the great shows sold from these yards.

More than a score of Blue winners at Madison Square, Boston, Jamestown, Chicago having been sold from these yards in two years!

This record is simply astonishing. One bird (Nabob 1st) sold by these people has made one eastern breeder famous from coast to coast, winning for his purchasers three first prizes and three cups in one year, and four firsts and four specials cups, etc., the second year at Madison Square, Boston, Cleveland.

Indeed, the list of big breeders to whom this firm has sold Black Orpingtons that have won in fierce competition at the four or five leading shows would be like calling the roll of honor in Black Orpingtondom.

It is quite apparent that Brown & Coleman will have some sensational Buffs and Whites to show next year as well as the best Blacks they ever raised.

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale. Eggs for hatching from my regular matings at \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100; from exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over \$1500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2 50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

Cycle Hatcher Co. - 214 Wm. St., Elmira, N. Y.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 30-egg machines. Am practicing in my store with a view to starting my 10-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it; one of 13 chicks and one of 46 chicks. All good ones. Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. I. Red Farm, Witmer, Pa.

PLANE'S S. C. WHITE LEGHORNS

won three silver cups at the Northern Illinois Show. Send for egg circular. Some extra good pens mated up.

JOHN C. PLANE, BELVIDERE, ILLINOIS

Blanchard's Rose Comb Rhode Island Reds

Winners at Chicago, Rockford, Illinois, and elsewhere. Eggs \$3.00 and \$2.00 per 15; utility 8c each, incubator \$5.00 per 100. Five mated pens besides utility yards. A. W. BLANCHARD, Beloit, Wisconsin

GLEN EYER POULTRY FARM

New home of King's famous winning strain of Barred Plymouth Rocks have moved over only some select stock. Mating list now ready, gives description of new plant and the very best matings that I have ever bred from. Don't forget my new address.

O. L. KING Glen Eyer Poultry Farm Rockford, Ill.

MISHLER'S R. C. B. MINORCAS

Have proved that they are the leaders in the west by winning at the last Chicago show 1, 4 cocks; 1, 5 hens; 2, 3, 4 cockerels; 2 pullet, 1, 3 pens and silver challenge trophy cup for best display. In the last display they won more points than the two nearest competitors combined in a class of 53 birds, the largest of this variety ever shown in Chicago. "Greetings from Maple Vista," the finest Minorca catalogue ever issued will be mailed for four cents in stamps. It contains illustrations of 55 of the birds in my breeding pens, descriptions of breeding pens, prices of eggs, etc.

LLOYD C. MISHLER, R. R. 1, NORTH MANCHESTER, IND.

THE BEST FOWL S. C. BUFF ORPINGTONS

The business fowl of the 20th century. Why? Because they begin to lay earlier, lay more eggs in winter, and mature quicker than any fowl in existence. The 1909 catalogue of the National S. C. Buff Orpington Club tells why they are so popular and everyone discards other breeds for them. Contains over 100 pages, fully illustrated; also large size ideal cuts of these money-making fowls that have caused so much comment throughout the entire poultry world. Everyone interested in poultry should have a copy. Price only 10c while they last. WILL H. SCHADT, Sec'y, Goshen, Indiana.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the World's Greatest Laying Strain. Unequaled in standard qualities. Remember that we are the originators, and for over 30 years specialty breeders of the justly celebrated Wyckoff Strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. Eggs for hatching in any quantity from the grandest of matings at \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. Catalogue and testimonials free. Address

WYCKOFF'S FARM - AURORA, Cayuga Co., N. Y.

Rose Comb Reds

Clearance Sale of one hundred choice Reds, Princess strain. Winners at Cincinnati, Hamilton and in the hands of our customers wherever shown. Must have room, hence the price is \$2 each for males and \$1 for females. Eggs from exhibition pens \$2 per 15 straight.

Housed in fresh air quarters and fed carefully for production of strong, germinal, vigorous chicks. Fertility guaranteed. \$3 per setting. Fine Orpington Cockerels for sale. Quality birds bred from Madison Square Garden winners.

H. F. KENNERK R. R. 7 FORT WAYNE, INDIANA

HANLON'S BUFF LEGHORNS

PRODUCE THE WINNERS. They have won the best prizes for years past. Lamon's Old Strain Pure. Eggs \$5.00 per 13, \$9.00 per 26. : :

Phillip Hanlon, Jr. : Watertown, N. Y.

Franklin's R. C. Brown Leghorns

Have won distinction at Springfield, Manchester, Hartford, Boston, New York and other places of note. Stock and eggs at reasonable prices. Bred for utility and show birds.

H. C. FRANKLIN, Townshend, Vt.

On February 1 they had something over 300 chicks hatched and being reared on their farm in Texas. These chicks will be fully matured there and shipped north to supply the early fall trade. It would be well to look up the Brown & Coleman ad elsewhere in this issue and all interested will be sent their catalogue by addressing them at Station L, Cincinnati, Ohio.

CATALOGUES RECEIVED.

We take pleasure in calling the attention of our readers to the following list of catalogues which have come to our desk. We recommend these breeders and suggest you send for their catalogue if interested:

The American Buff Leghorn Club Catalogue, a very large and profusely illustrated booklet, giving much valuable information to the breeders of Buff Leghorns. The president is L. E. Merihew, Marathon, N. Y.; secretary, George S. Barnes, Battle Creek, Mich.

Nate K. Cornwall, Thamesville, Ontario, who has been winning at some of the big shows on Buff Leghorns, tells you where under the heading of "Just a Little Cackle."

E. L. Delventhal, Warrenton, Mo., issues a big catalogue describing his six pens of Buff Rocks, gives his winnings, etc.

The Greystone Poultry Farm, Yonkers, N. Y., issue a profusely illustrated mating list, showing some cuts of their White Rocks that show typical Rock shape. They have an enviable list of winnings in hot classes. Have ten pens of White Rocks, two pens of White Wyandottes and two of Black Minorcas.

The Buff Rock Quarterly gives you the "doings" of the Buff Rock Club, including the advantages of belonging to the club. Correspondence should be addressed to William A. Stoltz, Indianapolis, Ind.

The Jubilee Catalogue of the Page Woven Wire Fence Company, Adrian, Mich., tells you all the good things about the Page Woven Wire Fence. This is the twenty-fifth year you have had the opportunity to buy Page Fence.

Robert D. Parmenter, Knoxville, Ill., issues a mating list for 1909 describing his Single Comb White Leghorns. His winnings include Chicago, Springfield, Peoria and other good shows.

F. Gage Cutler & Co., Carthage, Ill., send their catalogue. They have nearly

Good - Typewriters as-New Typewriters at Sacrifice Prices

We're starting a most unusual clearance sale of slightly-used typewriters, as serviceable as new. You'll Save Two-Thirds by Buying Now. We've an overstock of typewriters sold to us by money-pinched owners during the past year. Among them are several hundred excellent Smith Premier, Remington and Fay-Sholes machines. We've rebuilt them and put them in perfect condition. Send for catalog and list of unprecedented bargains. Machines shipped for approval to any point in the U. S., also rented anywhere. ROCKWELL-BARNES COMPANY, 946 Baldwin Bldg., CHICAGO

all varieties, and make great claims as to the laying quality of some of their breeds. A stamp will be appreciated when sending for their catalogue.

Harmon Bradshaw, Lebanon, Ind., sends his mating list of his noted S. C. White Leghorns. He has some winnings in big shows where the competition was keen, so if you breed S. C. W. Leghorns you had better send for it.

Walter G. Fenton, Mt. Clemens, Mich., who makes a specialty of Columbian Wyandottes, issues a very neat 40-page catalogue. His illustrations show some fine buildings and a nice orchard where his young chicks are raised. It will be remembered Mr. Fenton purchased of H. H. and E. M. Coburn, Memphis, Mich., their entire flock of Columbians, including their Chicago winners. These birds added to Mr. Fenton's flock give him a lot of "good ones."

"The Brooding Problem Solved" is the title of the Bruner line of brooding devices which are manufactured by the Bruner Manufacturing Company, Indianapolis, Ind. This is a neat catalogue, nicely illustrated and has some strong talk on why you should buy the Mother Hover. This hover looks simple and practical and breeders who use brooders should send for their catalogue.

The catalogue of the Old Homestead Farms Golden and Columbian Wyandottes. J. H. McDanell, Prop., Warsaw, Ky. The quality of the catalogue is good, and Mr. McDanell's winnings at Jamestown, Buffalo, Indianapolis and Chicago are convincing that this stock is also good.

S. A. Noftzger, North Manchester, Ind., the originator of the Partridge Rock, has a fine catalogue in which he gives a list of his winnings and a description of his twelve pens. Sam certainly has a fine flock of Partridge Rocks and is sure to meet with the success he deserves.

Greetings from "Maple Vista," the home of Lloyd C. Mishler, North Manchester, Ind., is a fine catalogue, profusely illustrated. The male and some of the females from each of his thirteen pens are shown and a complete description given of the pen. Mr. Mishler's winnings on Rose Comb Black Minorcas include such shows as Chicago and Jamestown expositions.

George B. Ferris, Grand Rapids, Mich., breeder of S. C. White Leghorns, has a neat little booklet describing his matings and giving his winnings.

William Miller, Fairlawn Poultry Yards, Crescent, Mo., breeder of White Rocks, has a nice mating list in which he gives some reasons why you should order White Rocks from him. His birds have won several sweepstake prizes, also

White Wyandottes

GOLD MEDAL—SILVER CUP PRIZE WINNERS

At Youngstown, Ohio, in a HOT class of 142 WHITE WYANDOTTES, I WON GOLD MEDAL for best cockerel and for best hen. Silver cups for five highest scoring birds in the class, average score 94½. Also first pullet, tied first hen, second cockerel, first pen. THREE GRAND PENS containing these winners, sure to breed winners. Eggs \$5 per setting. If you want quality send me your order. Some fine birds yet for sale.

W. T. CARROLL : : : : Youngstown, Ohio

Do You Know Hummel?

If not, you had better get acquainted. I have my breeding pens all mated up and can now fill your egg orders. My breeding birds score from 90 to 96 points. I have been very particular in selecting male birds for breeding purposes this season; every bird is strong and vigorous. By my method of packing eggs I am able to ship them anywhere with good results to purchaser, and guarantee safe arrival of eggs to your nearest express office at the lowest possible rate. You can order your eggs direct from this advertisement.

HAWKINS' CHAMPION Columbian Wyandottes

Won forty-two regular and special prizes at New York and Boston 1907 and 1908. The quality strain. Choice breeding birds and **EGGS** from the best breeding pens in America. 1 setting, \$5; 3 settings, \$10; 5 settings, \$15. Ad on back cover.

A. C. HAWKINS Lock Box 25 LANCASTER, MASS.

American Poultry Association gold and silver medals. Mr. Miller is vice-president of the White Plymouth Rock Club.

The Root Incubator Company, Cleveland, Ohio, fully describes their contact heat incubator and brooder in their catalogue, telling the reasons why contact heat is best.

Carver & Avey, Columbia City, Ind., breeders of Partridge, Silver Penciled and Columbian Wyandottes, have a neat little booklet describing their several matings and giving a table of winnings which include St. Louis World's Fair, Chicago, Cleveland and other large shows.

C. L. Buschmann, Indianapolis, Ind., 4939 North Meridian street, issues a "Red Book" describing his non-fading Rose Comb R. I. Reds.

John C. Plane, Belvidere, Ill., in a neat little booklet describes his five pens of S. C. W. Leghorns.

Edwin R. Cornish, Edwardsburg, Mich., has a mating list of his Cornish Quality Rose Comb R. I. Reds. He claims to have some of the most valuable birds in the world.

E. B. Sprague, Flushing, N. Y., breeder of S. C. Buff Orpingtons, describes five pens and lays considerable stress on the fact that he has Orpington type.

Walter Sherman, Newport, R. I., has a nice catalogue of his Rhode Island Reds, having two full-page three-color plates which show up his birds to good advantage.

W. D. Holterman, fancier, Ft. Wayne, Ind., breeds Barred Rocks and calls his strain "Aristocrats." He has a nice catalogue, the cover being printed in blue and gold. It is easy to see that Mr. Holterman is in love with his birds.

The mating list of F. W. Richardson, Hicksville, Ohio, originator of the Knoxdale strain of Barred Plymouth Rocks, gives his prices, which are very reasonable, also winnings, show records, etc. We advise our readers interested in Barred Rocks to send for it.

Prof. F. W. Kennedy, Tiffin, Ohio, breeder of White Wyandottes, has three good pens of White Wyandottes mated for the egg trade. The professor is an enthusiastic poultryman and takes great interest in his pets. You will find his ad in this issue.

Harness leather becomes hard, brittle, unsafe, when the pores in the leather are open to wind and moisture. An application of

EUREKA Harness Oil

fills the pores, seals them against these hardening, rotting agencies and keeps the harness a beautiful black, soft, elastic, and tough. Eureka Harness Oil does wonders for a harness. Ask your dealer.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, **THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING**, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken No lamp is required. No danger of chilling, overheating or burning up the chickens as with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

Valley Falls, N. Y., Sept. 5, 1907.
It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

(Rev.) W. W. COX.

October 22, 1908.

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

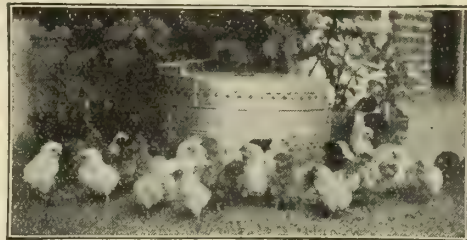

(Rev.) W. W. COX.

Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chicks in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving?

Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.

Yours truly,

ROY MOYER.

Bethlehem, Pa., April 25, 1908.

Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH.

Potomac, Ill., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

Send \$1.00 and a copy of the latest revised edition of the book will be sent you by return mail. Address

Best Brooder Co., 914 Monroe St., Toledo, O.

FROM A PURCHASER OF THE KING BONE CUTTER.

Crookston, Minn., March 17, 1909.
R. H. O'Neill,
951 Washington Blvd.,
Chicago, Ill.

Dear Sir: After a prolonged wait owing to your moving your shop we received our bone cutter, but say, I'd have waited twice as long and cheerful too if I'd have known what was coming when it did come. We have been wanting a bone cutter for some time, but hardly felt able to afford one, but sort of being suckers and biting easy on seeing your ad for the first time we said we liked the principle of it and the price, too, so we'd tackle it. Well, we did, and got it yesterday. I told one of our poultry friends down town we'd ordered a new bone cutter and they said, why didn't you let me know you wanted one, we have one to sell. Yes, I knew they did, it's one of these other kind, geared, you know; well, it's just like all those old ones, takes a little more than muscle power to run them—worn out, so to speak. They said they didn't believe my new one at that price and principle would do, but I said I thought so. Told them yesterday the bone cutter was finally there and they said they'd be out next Sunday and could see then how it works.

When I got home and put it up and tried it I just dropped them a postal for fun and told them it run all O. K., thought it might relieve them, you know, Sunday is a long while to wait "to be showed."

Now, if there is any ground floor in your business I'd like a little of it. What I mean is, do you have any one in other districts handle your machine? We, that's my wife and I, are members of the poultry association here and our show date is early next winter. If we could handle them for you and put one up and "show" the members, I think there would be quite a scrap-iron pile of the other makes on hand. They could not afford to run them if they had to give them away.

You may not have district agents, but the skeptical have got to be "shown," and once shown will do more than all the adv. printing to most people.

We will show our birds (Buff Rocks) at all the leading shows around here next winter and would like to take a bone cutter along and demonstrate for you. If you want my pedigree ask the Crookston State Bank or First National Bank.

Respectfully yours,
J. H. Beebe.

C. W. ZIMMER, REPRESENTING
THE AMERICAN POULTRY JOURNAL, VISITS GEORGE W. BACHMAN, NORTH BALTIMORE, OHIO.

Mr. Bachman is a breeder of exhibition Barred Rocks. For several years past he has been supplying the winners at many of the large shows. His birds have good size, Rock type and that clean, clear cut, brilliant color that catches the judge's eye. Mr. Bachman's winnings at Toledo and Columbus, O., demonstrate this fact. At Columbus, O., 1908, he won more points than any other exhibitor, securing the Barred Rock Loving Cup. We found many birds of extraordinary quality in his yards and they are mated right, the quality of color to be found here is remarkable. Cockerel bred pullets showing clean cut barring down to the skin, as well as clear wing bars, many would do to show. He has been producing better quality every year and says he has by far the best matings this year he has ever put together. Mr. Bachman is thoroughly reliable and his prices are very reasonable. If you need new blood or want to raise some show specimens you will do well to write him. You will find his ad in American Poultry Journal.

M. B. Willis, Auburn, Ind., breeder of S. C. Black Orpingtons, won on 16 entries at La Grange, Ind., 4 firsts, 4 seconds, 3 thirds, 2 fourths, American Poultry Association diploma on best cockerel, and 7 other specials. At Defiance, Ohio, in a class of 55 Black Orpingtons, he won first cockerel, first and second hen, second pullet, third cockerel, three specials. His cock bird has never been defeated. Mr. Willis has been showing and winning for years and breeds some good Orpingtons. His prices are very low. See his ad in this issue.

POULTRY FANCIERS' YARDS.

Mr. Frank Sissons's at the Poultry Farm, Worksoy.

(William Bush, Head Poultryman to the Duke of Portland, K. G., in Poultry, London, England.)

Last October I had the pleasure of inspecting Mr. Frank Sissons's flock of Buff Orpingtons at his Blyth Road Poultry Farm, Worksoy, Notts. Of course, at that time I was only able to deal with the cockerels and pullets; but being desirous of seeing what the breeding pens were like when they were mated up, I gladly embraced the opportunity of doing so on Saturday last. I must say at the outset that each of Mr. Sissons's pens is headed by one or more of his big winners, and several of the hens and pullets likewise have done well at some of the principal shows.

To commence with No. 1 pen: This consists of a grand young cockerel of enormous bone, very short on legs, rather above

Birmingham winner and first winner at Burton-on-Trent, where he beat all the birds in the show, both cocks and hens. He is the tint of a rich-colored sovereign and is a massive bird, absolutely sound, deep set and is mated with eight early hatched, sound, good pullets of a stamp which, in my opinion, it would be difficult to meet in any breeder's yard.

No. 4 pen contains a 1907 cock—a bird of rare type, and one I consider likely to breed the best of exhibition stock. He is absolutely sound in color, tail and flights and has a pair of real good ivory legs, beautifully white and round. He was exhibited for the first time last week at Retford, and took first and special, with a pullet, in the pair class. This bird is mated with eight beautiful pullets of wonderful bone and perfect type. A very striking feature I noticed in these pullets is their small neat combs, which are so pleasing to the real Orpington fancier and student.

The hens in No. 5 pen have as a mate a very nice medium sized cockerel of a deep rich color, and very sturdy and cobby. He is too dark for exhibition, but is calcu-

MR. F. SISSONS' BUFF ORPINGTON HEN AND PULLET.

(Mother and Daughter, Both Bred by the Exhibitor.)

Hen won (as a pullet) in 1907: 1st and sp Newark; 1st, Challenge Cup and sp Retford; 1st and sp Northallerton; 1sts at Ashover and Harthill; 2ds at Bentham, Crewe and Kegworth; hc Crystal Palace, vhc Dairy (in an exceptionally strong class of 75), and many other prizes; and in 1908 (as a hen), 1st Birmingham (only time shown this season); 1st Belfast. Weight: Hen, 12½ pounds; pullet, 11¼ pounds.

Pullet has won this season: 3d Crystal Palace Harthill; 2ds at Barnstaple, March and alace, 1sts at Rotherham, Retford, Peterboro Epworth; 2d Belfast; vhc Birmingham, and many other honors.

the medium shade in color, but very rich throughout. He has a rare good head, and is absolutely sound in color. Among the many prizes taken by this cockerel this season are: First and special for the best bird in the show at Rotherham, and first and special at Epworth, while he was "commended" in the open class at the Crystal Palace the first time he was shown. He is mated with eight grand, low set, cobby pullets of a good medium shade, all of which have great size and bone. This pen should produce some rare pullets.

No. 2 pen is headed by a cockerel of a rather deeper color. He is an enormous young bird, absolutely sound from head to tail, of typical Orpington character, very short in back, not a suspicion of black in his tail, and with under color such as one rarely comes across. His only defect, if any, is that he is a wee bit too long on leg, but, of course, even then it must not be forgotten that he will come down a lot during the next few months. He is mated with eight grand, cloggy hens, most of which (as hens) have won at the various shows. The cockerel on the only occasion he was shown took first, special and cup for the best bird (any breed) in the show at Retford a few weeks ago, and easily beat the Newark Cup bird, which took everything before it only eight days earlier.

No. 3 pen has as master a fine prize

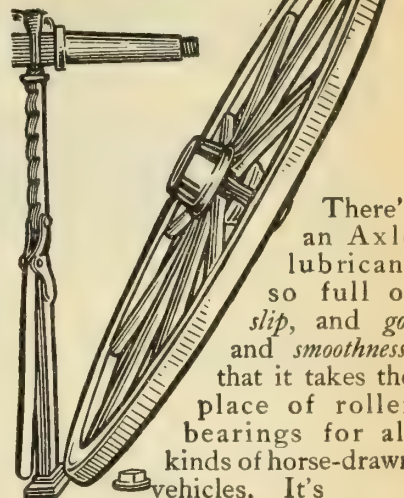

lated to breed some rare exhibition pullets. He is by a cockerel directly descended from one purchased of Mr. Frank Bloomer, and own brother to Mr. Sissons's third Palace pullet this year. Of the hens I would merely remark that they are of a grand type—one in particular weighing nearly 12 pounds, one of the biggest hens I have ever seen (and I have had under my immediate control every year for twenty years several thousand head of birds).

No. 6 pen: Here, again, we come across a massive 1907 cock—a good, cobby, low set bird, weighing about 14 pounds. Birds of this weight, shape and type are rarely to be met with. He is absolutely sound in tail and flights, and rich in under color, and he should produce pullets for the 1909 season of a real Orpington type, mated as he is with big, well built hens.

No. 7 pen contains a very nice colored cockerel, somewhat rather smaller, if anything, than any one of those previously described, but still sound in color and of that typical character which I have noted everywhere on Mr. Sissons's place. He is mated with six 1907 hens, and I consider this pen is bound to produce chickens of great size, inasmuch as they are six of the cloggiest hens, I think, I have ever seen.

No. 8 pen consists of a 1907 cock, specially selected for pullet breeding, and which last year sired quite a number of

Easy as Roller Bearings

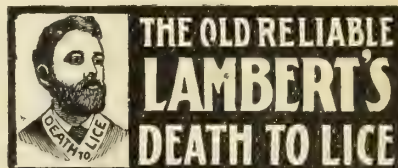

MICA AXLE GREASE

And a trial of it means constant use ever after. Mica Axle Grease *won't* make an empty wagon *push* a horse up hill; but it *will* make a big load draw no end of per cent easier.

It's a friction killer and a horse saver; and it wears so well that it's hard to remember the date of last greasing.

Ask your dealer for Mica Axle Grease and try it.

Amatite
ROOFING

A Cure for Leaky Roofs

DON'T waste time trying to patch a leaky roof! A roof which leaks in one place is generally on the verge of leaking in many other places.

The cheapest method of repair is to cover the whole roof with Amatite. Amatite costs so little that the entire job can frequently be done for the expense of caring for a leaky roof. After the old roof is covered with Amatite you will have no further worry or expense.

Most ready roofings require a coat of paint every two years to keep them in order. But Amatite is not the ordinary kind of Ready Roofing. Amatite has a real mineral surface, firmly imbedded in the Coal Tar Pitch waterproofing. This surface resists the attacks of the elements like a stone wall. It demands no additional protection or

covering, such as a coat of paint.

Buying Amatite is the same as buying an ordinary ready roofing with an agreement from the dealer to keep it painted free of charge. Such an agreement on the ordinary roofing would double its value. You practically get such an agreement with every roll of Amatite; yet the price is no greater than that of the ordinary kind.

Send us your name and address, and we will forward you by return mail a free sample of Amatite, and you can see how tough, durable and substantial it is. Write today to nearest office.

BARRETT MANUFACTURING CO.

winning pullets. He is mated with eight pullets of capital type and shape. These, again, are some of the biggest boned pullets one could meet with anywhere. The cockerel is a bird of absolute soundness in color and has been specially reserved for breeding, never having been exhibited.

In No. 9 pen was a very heavily built cockerel, mated with eight fine typical 1907 hens.

Having looked over the breeding pens, I went into a paddock of several acres, which contains about a score or more buff and black cockerels, all of which are for disposal. Anyone desirous of purchasing a bird of good shape, type and color and of imparting the best of fresh blood into his stock might go farther afield and fare worse than securing one of these choice young stags, one of which, picked out at random, weighed 13¼ pounds.

In a number of cockerel pens I saw some nice young buff cockerels, all carefully shaded and ready for immediate exhibition. Some of them were about to be sent out to various parts of the country, six pullets and a cockerel being then ready for despatch to Ohio, U. S. A.

In a number of specially constructed houses there were about fifty nice pullets being shaded for exhibition, all of which are for disposal, and anyone looking for such birds could not do better than apply to the Workshop Poultry Farm. (I mean here to say that Mr. Sissons always prefers to send out his birds on approval.)

In a cockerel pen, specially shaded, was a grand hen, which took first prize at Birmingham a few weeks ago (only time exhibited this year), and which last year (as a pullet) took many first prizes and cups.

In an adjoining paddock were about thirty 1907 hens, some of them of really wonderful type, bone and shape, as well as absolutely sound in color.

Running out in another paddock, wired round, were about 100 pullets, all more or less "weathered." Still, those I examined were all of them sound in flights and good in under color—not a waster to be found among them.

Speaking of the nine breeding pens of Buff Orpingtons, I can conscientiously say that they are a grand lot, and for size, combined with quality, I do not know where I could go to see birds to surpass them. Of those I handled (and as far as I could see of the others) they were all sound in flights and under color; and not one of them that I handled contained anything more than a very slight peppering in tail, and the generality of them were very free from breast lacing.

I would here mention the excellency of the dusting sheds in each breeding pen; they are large, roomy places, fitted up on the best hygienic principles, each dusting shed being 15 feet or 16 feet square.

I have spoken more particularly of buffs, since they are the specialty of the Workshop Poultry Yards; but Mr. Sissons has also a number of blacks which have taken numerous prizes, notably two cocks which have gained within the last fortnight first and special Staveley, second Retford, as well as many prizes last year as cockerels. A black cockerel took first and special Rotherham and third Retford; and a black pullet first at Chesterfield and second Staveley.

I would add that, apart from exhibition qualities, Mr. Sissons's strain of Buff Orpingtons has been created with due regard to the laying propensities of the birds, great care having been bestowed upon them in selecting only good laying hens and pullets, and the cockerels all being bred from good laying strains. And last, but not least, I would say that perhaps the chief feature is the immense bone and frames of both cockerels and hens.

Mr. Sissons tells me that he has already booked orders for a considerable number of eggs from his best pens, indeed he cannot undertake to deliver any now until after the second week in January.

I alluded in a previous article a few months ago to the excellent character of the soil for poultry rearing, and I quite agree with Mr. Sissons in his belief that the size he is able to produce here (for example, one of last year's cockerels weighed 15 pounds 3 ounces) is largely attributable to the nature of the soil, which is exceedingly dry and sandy (there are never any pools of water in the wettest weather), and there is a nice southern slope, yet well covered with grass. I also in my last notes referred to the cleanliness of the houses everywhere, all of which are constructed specially to Mr. Sissons's fancy—ample ventilation being considered of just as much importance as is the best of food (and clean water) for the health and robustness of his stock. One feature I observed was the arrangement whereby his flock is guarded here and there from

FIVE ACRES, \$100

\$5.00 DOWN : \$5.00 MONTHLY

Located in Southern New Jersey. Excellent land for poultry raising, the clean, dry soil and mild climate being conducive to winter laying and early broilers. Good successes now being made in this locality raising chickens, ducks, squabs, vegetables, fruits, berries and grapes. Near Atlantic City and other New Jersey winter and summer coast resorts which pay fancy prices for early produce. Excellent shipping facilities to Atlantic City, Philadelphia and New York markets. Pure air and water. Title insured. White persons only.

the depredations of both two-legged (!) and four-legged foxes, namely, he has three dogs which are chained up and their chains noosed onto a stout wire run, enabling the dogs to travel nearly from end to end of the yards in which the houses are situated.

As to the meal house and other places, I will not go into details here, because I alluded to them in my last contribution, but I would just mention the very handy, completely fitted up, little pen house; and it is a pleasure to see the large number of prize cards which decorated its walls. This place is fitted up with all needs; electric light enabling the birds to be fed at all hours, day or night; hot and cold water, fireplace, sink and every requisite. In this pen house are a number of principal winners, being kept in condition for the few remaining shows this year. Among the many prize cards I saw were: Two firsts Birmingham; first, second and challenge cup Retford; first, special, second and third Staveley; third Crystal Palace; second and third Barnstaple; vhc Dairy; first Burton-on-Trent; first Rotherham; first Chesterfield; first and second Peterborough; first Epworth; three firsts Harthill; second March; second Carmarthen; and many others, all this year.

Everything on Mr. Sissons's poultry farm is of an up-to-date character, and it does not need one to spend much time there to note the care bestowed upon the birds and the excellent quality of the foods used and the appliances. I would say, with the situation of the land, it does not astonish me that the owner has been able to obtain, in so short a time, such remarkable success at the shows.

Mr. Sissons makes a specialty—and a study—of mating up trios or quartettes for successful breeding; and has implicit faith in "line breeding."

Within the last few months he has exported a quantity of bufs to Canada, India, South Africa and other parts of the world.

I noticed while passing through every preparation is being made for the coming breeding season, one Hearson incubator being due to hatch about January 2, of which about 72 per cent is fertile, which is very creditable for this time of the year. Other machines are being set running for immediate use.

Mr. Sissons tells me he has been obliged to refuse a quantity of orders for eggs for immediate delivery, the orders of which, and the quantity and quality of poultry sold, are due to the wide circulation of Poultry, which conveys the advertisement to all parts of the world.

The Workshop Poultry Farm is only about five minutes' walk from Workshop (Great Central) railway station, and anyone desirous of paying Mr. Sissons a visit will receive a cordial reception.

Mr. Milton Brown, Sta. L., Cincinnati, Ohio, is American agent for Mr. Sissons, and will book orders for birds or eggs.

BUCKBEE'S BIG SEED CATALOG.

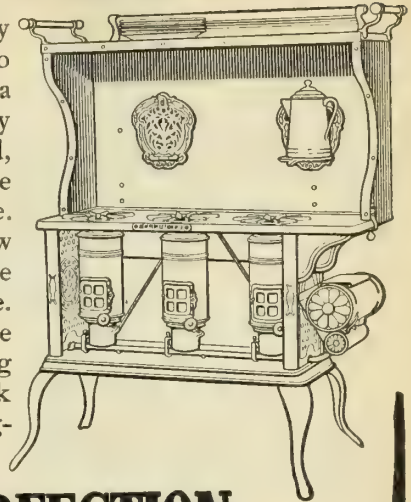

We wish that every reader of ours would send for a copy of Buckbee's Big Seed and Plant Guide for 1909. It is replete with good illustrations showing many vegetables and flowers in their true and natural colors. This book contains a vast fund of information of especial value to buyers of seeds and plants. Buckbee's seeds are the best that money can buy. The Big Buckbee Seed and Plant Guide free to all our readers who mention this paper. H. W. Buckbee, Farm 51, Rockford, Ill.

Elsewhere in this issue will be found the ad of George Barkdoll, West Unity, Ohio, breeder of exhibition and utility White Wyandottes. His winnings at the great Toledo show, of five premiums on five entries, including first cock and first pullet, was the sensation of the show. Following this up at the Indianapolis show by winning second pullet on one entry. At the Toledo show he refused several flattering offers for cock winning first, including one of \$100 from a prominent eastern breeder, also an offer of \$50 for first pullet. Mr. Barkdoll is offering eggs at the remarkably low price of \$2 per setting. Many other breeders ask \$5 or more for the same quality. Write for free illustrated mating list.

L. P. Teeple, of Belvidere, Ill., won at Northern Illinois Poultry Association, Belvidere, Ill., January 25 to 30, 1909, as follows: First and second hen; first and second pullet; first and second cockerel; second cock; first pen; whitest bird in show. George D. Holden, judge; seventy-five in White Wyandotte class.

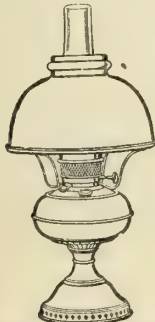

Put This Stove in Your Kitchen

It is wonderfully convenient to do kitchen work on a stove that's ready at the instant wanted, and out of the way the moment you're done. Such a stove is the New Perfection Wick Blue Flame Oil Cook-Stove. By using it you avoid the continuous overpowering heat of a coal fire and cook with comfort, even in dog-days The

NEW PERFECTION Wick Blue Flame Oil Cook-Stove

is so constructed that it does not add perceptibly to the heat of a room. It differs from all other oil stoves in its substantial CABINET TOP, with shelf for warming plates and keeping cooked food hot, and drop shelves for holding small cooking utensils. Has every convenience, even to bars for towels. Three sizes. With or without Cabinet Top. If not with your dealer, write our nearest agency.

The **Rayo Lamp** is the ideal family use—safe, convenient, economical, and a great light giver. If not with your dealer, write our nearest agency.

SHOEMAKER'S BOOK ON POULTRY AND ALMANAC FOR 1909.

There is nothing in the world like it. It contains over 200 large pages, handsomely illustrated. A number of most beautiful Colored Plates of Fowls, true to life. It tells all about all kinds of **Thoroughbred Fowls**, with life-like illustrations, and prices of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Poultry Houses. It tells all about **Incubators and Brooders**. It gives full instructions for operating all kinds of Incubators. This chapter is marvelously complete and worth dollars to anyone using an Incubator. It gives descriptions and prices of Incubators, Brooders and all kinds of Poultry Supplies. In fact, it is an encyclopedia of chickendom and will be mailed to anyone on receipt of only 15 cents. Your money returned if not pleased. **C. C. SHOEMAKER, Box 606, FREEPORT, ILL.**

RHODE ISLAND REDS

Practical fowls! The man who breeds for business will find them a prolific egg producers in all seasons—hence money-getters. Unsurpassed for table use, weighing from 5 to 8½ pounds; plump tender, delicious! The chicks are rugged and mature quickly; commence laying early; are splendid sitters. This remarkably hardy strain requires comparatively slight care and attention. Can be had with Rose or Single Comb. Send for my free, illustrated Catalogue; tells all about the Reds—their remarkable origin, their exceptional possibilities in point of profit. You will be interested.

Other Good Birds

My Barred Rocks are of the Sisson strain. None finer. Some of these highest scored a larred Rock ever did—97 points. Am also prepared to supply White, Buff and Black Rocks, White and Columbian Wyandottes, White and Buff Leghorns, Black Javas, Light Brahmas, Pekin Ducks.

Don't Miss My New Book on Reds

Absolutely the finest work of its kind. Your's for 20 cents in silver. Would be cheap at fifty. Amount credited on purchase of "Eggs to Hatch." Handsomely illustrated; tells all you need to know about complete care of chickens. Edition limited, don't delay.

WALTER SHERMAN
Citizen's Farm, Newport, R. I.

FACTS ABOUT INCUBATORS.

Hard facts, instead of loud boasts, are what the modern poultryman is looking for. He is a thinking, studious man. He does not want to be told what he wants in the line of incubators. He can decide this question for himself better than anyone else can decide for him. When he reads up on the subject, he does not want to read the claims of any one manufacturer for any particular incubator. He wants to know about them all.

The Sure Hatch Incubator Company, of Fremont, Neb., and Indianapolis, Ind., has realized this fact, and has therefore issued just this kind of a book. The Sure Hatch Company is composed of practical poultrymen.

Their new Incubator and Brooder Book gives the reader the benefit of the latest money-making information. It gives him the opportunity to learn all about incubators and brooders, before investing a cent. It tells what is going on in the poultry world—all the new ideas and discoveries. It is the most complete and reliable treatise on incubators ever issued; in fact, tells about all kinds, exposes the "shams" and "fakes" that are offered at ridiculous "bargain" prices, and tells about the incubators that really hatch. It practically turns every machine inside out, and explains the scientifically correct principle of incubator construction, and shows how the Sure Hatch is constructed.

Every statement in this book is backed up by a reason. This is the first time in the history of the incubator business that a comprehensive book covering the whole subject has been issued. Ordinary incubator catalogs are full of conflicting claims and unsupported statements. Each maker tells his side of the story. What the intending purchaser of an incubator wants is all sides of the subject. He cannot afford to experiment with a lot of incubators, for there are forty or fifty different kinds, and every one costs money.

Success with incubators is not the result of chance. The science of artificial hatching is based on facts, not theories. The price of an incubator is not a safe guide, for it is easy to build them cheap. The book gets right down to foundation principles. Makes everything plain.

The Sure Hatch Company has printed, for free distribution, several thousand copies of The Incubator Book. It contains more good, practical help for poultry raisers than in any other book ever sold for \$2, yet it is free for the asking.

POULTRY RAISING MADE PROFITABLE.

How to Learn All About the Habits of the Various Breeds.

One of the first interests of the man or woman who takes up poultry raising, after securing the right kind of breeding stock, is to become thoroughly posted on everything connected with the business; to learn just how fowls should be sheltered, fed and cared for; all about their peculiarities, habits and diseases; in short, how they may be made to yield the greatest profit from the investment.

Books have been published by the thousand, dealing with these subjects, but most of them are not practical, and the reader frequently finds himself unrewarded for the time spent in going through them.

However, there are a few publications of real merit, and the poultry grower who follows such counsel is not likely to go far astray. Prominent among these is one entitled "Greider's Book on Poultry," published annually by B. H. Greider, a poultryman of many years' standing, and consequently able to speak upon the subject with authority.

In this book are fully described the qualities and characteristics of sixty different breeds of chickens, turkeys, ducks, geese and pigeons, together with typical illustrations of each. In addition, there are fifteen handsome chromos, showing various breeds in the natural colors of their plumage.

This is without doubt an exceptionally worthy book, and with its practical information on buildings, feeding, and other important subjects, will prove invaluable to everyone who keeps poultry. It will be forwarded to any address upon receipt of ten cents, in coin or stamps, by the publisher, B. H. Greider, Rheims, Pa.

LICE cause loss and trouble. Don't let these expensive and obstinate pests get a hold on your hens. Follow the example of successful poultry men—use

Pratts LICE KILLER

(Powdered Form)

Quickly kills all Lice on poultry, and insures increased profits to the poultry raiser. Best for little chicks, big chicks, setting hens and incubator chicks. It is sure and quick in its action, safe and economical to use and will produce results that cannot be obtained in any other manner.

Use **Pratts Head Lice Ointment** on your little chicks and see them thrive. Cures scaly legs too.

If your dealer cannot supply you, send us 10 cents for the Ointment and 25 cents for the Powder and we will supply you prepaid.

A VISIT TO QUALITY HILL POULTRY YARDS, CANTON, ILL., F. A. & W. Z. BENNETT, PROPRIETORS.

(By Louis A. Stahmer, Poultry Artist.)

While attending the Illinois State Show this year at Springfield I met Mr. F. A. Bennett of Canton, Ill. As he was about to issue a new catalogue he asked me to make a few illustrations for him. After the show I went with him to his place to make some photos of his yards and poultryhouses, etc. I had noticed his advertisements in the different journals, had also made one or two illustrations for him before but as I had never seen his place I expected to see about an average poultry fancier's yards. Great was my surprise when instead of this I saw a "Poultry Plant" (note I say PLANT) that will stack up with the best of them and as far as the quality of the stock goes will say, that I honestly believe that Mr. Bennett could send birds to a number of shows at one time, entering a bird for every prize offered, and still have enough birds left at home that the majority of fanciers would call "A. No. 1." Few men have gone to greater expense and time in perfecting a breed than have the Bennetts. The type and color alone they have succeeded in breeding into their R. I. Reds is noteworthy. I did not see an off colored, mealy, chocolate necked bird on the place, every bird fairly glistening with vigor and health. There is nothing to be wondered at, then, that the many first prizes at the leading shows which their birds have won for them have been won strictly on merits, and the man or woman who buys eggs or stock from them will get "Quality" that cannot be duplicated anywhere in this country. What was said about their R. I. Reds applies also on the many fine Barred Rocks they are breeding. The straightness and regularity of the barring together with snapping color forming that so much desired "ringy" appearance, and which is visible at the first glance, have won many a first prize for them.

Prospective customers either intending to improve their own stock or start up

with R. I. Reds or Barred Rocks will do well by sending for the new catalogue. One feature about this catalogue and what one does not generally find in other catalogues is that the birds are shown "just what they are." No artificial retouching such as improving the shape etc. on the photo was resorted to. If you

580,000,000 doses. This record should be a sufficient guarantee of the merits of the preparation.

The proprietors of Oakwood Poultry Farms, Marshall, Ill., are offering bargains in eggs for hatching in large or small quantities this month. They breed

Flock of Rhode Island Reds, on farm of Walter Sherman, Newport, R. I.

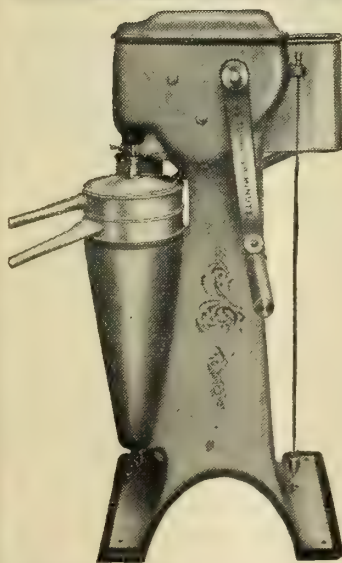

are looking for eggs that will produce as good stock as it is possible to buy, write for their new illustrated catalogue.

Elsewhere in this issue will be found the advertisement of Bromo-Seltzer, the world renowned remedy for headaches, a delightfully refreshing effervescent salt, which braces the nervous system, invigorates the mind, cures headaches, relieves mental exhaustion, insomnia, nervousness and nervous dyspepsia. The Emerson Drug Company, Baltimore, Md., manufacturers of Bromo-Seltzer, claim to have sold during the past ten years 125,000,000 bottles of the various sizes, aggregating

Single Comb White Leghorns, White Plymouth Rocks and a few White Wyandottes. They send out eggs by the thousand or the single setting. They have been eight years in business, have a good show record and we guarantee their reliability. Look up their ad. in this issue or write them for terms.

No use paying high prices for fence when Kitselman Bros. ask only 15 cents a rod up. See their ad in this paper and write today.

Wholesale prices on fence—15 cents a rod up. Write today for Kitselman Bros.' free catalogue. See their ad in this paper.

1909 Tubular "A"

Common "disc" or "bucket bowl" separators require more careful leveling than Tubulars. Yet, to level these common separators, you must place a spirit level on their frames. If their frames are a little out of true, as they usually are, the leveling of the common "disc" or "bucket bowl" separator is largely guesswork.

Here I Am

The plumb bob is one of the handy improvements on the 1909 Sharples Tubular "A" cream separator. It adds miles to the great lead Tubulars have always had over all other separators.

This "plumb bob" enables you to set the 1909 Tubular "A" perfectly level in a minute—quicker than you could find the spirit level needed to set any other separator. You can always tell, by a glance at the plumb bob, whether Tubular "A" separators are level, thus always keeping the Tubular up to its very best work. Just another example of the "up to the minute" and "away ahead of the rest" character of Tubulars.

Tubulars Are Different From All Other Separators

Tubulars are built on absolutely correct principles—that is, Tubulars have a bottom fed bowl hanging below a simple, frictionless ball bearing. The one piece frame and the permanent, compact, strong construction of Tubulars enables us to add to Tubulars some very handy devices which it is impossible for other manufacturers to use on their constantly changing common "bucket bowl" machines.

The incorrect principles of common "bucket bowl" machines—that is, a top fed bowl set up on top of a spindle—make all such machines unsatisfactory and necessitate constant changes that are merely makeshifts and not improvements.

Tubulars are built in the world's greatest, best equipped cream separator works. We have additional Tubular factories in Canada and Germany. Tubular sales for 1908 were way ahead of 1907—way out of sight of any competitor, if not all competitors combined.

Our 1909 Tubular "A" is better than any previous Tubular and is guaranteed forever in every part.

FOR PIGEON BREEDERS.

A newcomer among periodicals is a novel publication entitled the National Squab Magazine, to be issued monthly from Boston, Mass. The first issue just received, dated February, has a handsome cover depicting two squabs, four weeks old, in nest. The body of the magazine is set in good-sized type and the whole is printed on an excellent quality of coated paper. The magazine is illustrated.

All of the articles in the first number are original and it is stated by the publishers that this policy will be continued, giving only contributions by the master minds in squab breeding in America.

The leading article in the first number is by M. C. Martin, a Kansas breeder, telling how to hatch only the eggs of the largest birds. Instead of waiting for a bird to grow to the age of six months before accepting or rejecting it Mr. Martin judges the bird in the egg, thus saving months of useless time and expense. No small or otherwise undesirable birds are raised. The poor birds do the work of the better birds and the better birds do double the work. The second article is "How to Ship Squabs to Retail Trade," by F. B. Shepard. He tells how to build a squab shipping crate for 10 cents, so cheap that it may be destroyed after use. He instructs how to pack squabs in waxed paper, and gives other points telling in general how to market squabs so attractively that they bring \$4 to \$5 a dozen, which price the author is receiving. V. S. Smith contributes some interesting squab market news from Missouri. L. M. Bates, who is the editor of the new publication, tells how to cull to improve a flock and also has two pages of editorials on timely squab topics. A. F. Wright recounts how a new plant was started successfully with three hundred pairs of homers. "How to Sell Squabs by Advertising," is the title of a contribution by E. C. Rice. Such topics as why, when and how to transfer squabs from one nest to another, how to tell the ages of squabs by the feathers, are treated instructively. Woman's work in squab raising is given a two-page article illustrated by photographs taken at the plant of a Massachusetts woman. An instructive novelty is an X-ray photograph of a homer pigeon accompanied by reading matter on pigeon anatomy, how to determine sex. The publishers state that it is their intention to print squab market news from different portions of the United States and keep subscribers posted so that they can sell squabs intelligently. Among the advertisements are found the cards of marketmen who are squab buyers.

This new periodical is starting off well, as the publishers state that the subscriptions have been coming in since January 20, at the rate of from fifty to one hundred daily.

The subscription price of the National Squab Magazine is \$1 a year. The publishers make an introductory price of 50 cents a year, which will be withdrawn after the magazine is established. Published by the Squab Publishing Company, 220 Purchase street, Boston, Mass.

IMPROVEMENTS IN AMATITE READY ROOFING.

Amatite Roofing, which has for several years been growing rapidly in popularity among our readers on account of its no-paint mineral surface, is now being made with several little improvements designed to make it easier to lay.

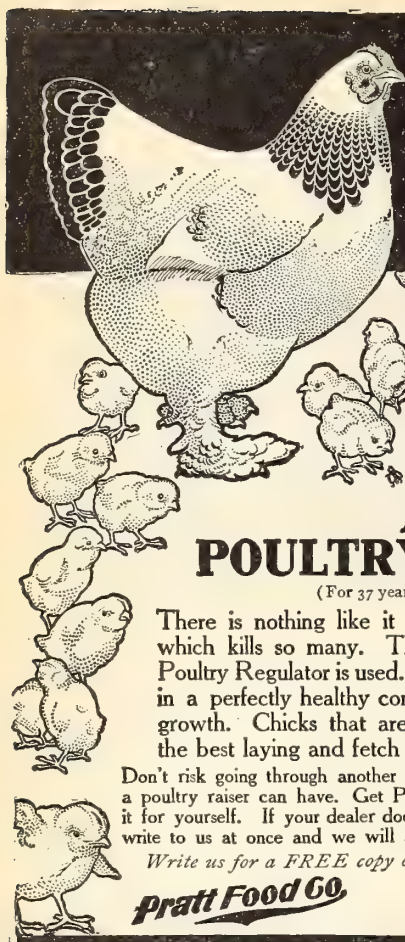

One of these is the smooth lap, left along the edge of the roll, about three inches wide, where the mineral surface is omitted. This smooth lap makes a closer and tighter joint possible.

The adhesive cement which is supplied with each roll now comes in liquid form and does not require heating before use.

Instead of supplying nails and caps, the nails themselves have extra large heads, thus saving considerable bother in putting down the roofing.

Readers who are unfamiliar with Amatite Roofing should send for a sample to nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Boston, Pittsburg, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans and Cincinnati.

75c Pays for one year's subscription to American Poultry Journal, Western Poultry Journal and Farm-Poultry. See advertisement elsewhere in this issue.

A HAPPY FAMILY

Healthy chicks make healthy fowls. And healthy fowls are an unfailing source of profit to their owners.

You can make your chicks grow up quickly into fat, healthy, productive fowls by giving them

Pratts POULTRY REGULATOR

(For 37 years called Pratts Poultry Food)

There is nothing like it to safeguard the chicks against disease which kills so many. There are no sickly chickens where Pratts Poultry Regulator is used. CUTTING OUT THE "FRILLS."

A Big Incubator Manufacturer's Theory Reduced to a Working Basis—and How It "Works Out."

"How can you sell your 240-egg incubator for \$10?" was the inquiry recently made of the superintendent of the Reliance Incubator Company, of Freeport, Ill.

"Oh, we do it by cutting out the frills," was his reply.

At first glance this looks like an explanation that does not explain, but when sifted to the bottom it has the merit of clearing the atmosphere of many seeming inconsistencies. "I don't suppose all other incubator concerns are engaged in a 'hold-up game,'" said the Reliance man by way of elucidation; "many of them are making good incubators," he continued, "and are selling them at a price which gives them perhaps only a fair margin of profit. If it costs a manufacturer twice as much to make and sell his incubator as it does for us to make and sell the Reliance, probably, in justice to himself, that manufacturer ought to get twice as much for it, even though there isn't an added dime's worth of real value in it."

"But how can practically the same incubator cost one maker any more than another?" was the interrogative suggestion.

"It doesn't," responded the Freeport man, "or at least it shouldn't, particularly if one is buying raw material in substantially the same quantities as the other. Don't forget that what I mentioned was the cost to make and sell. No one can put better material into an incubator than we are putting into the Reliance. No one can employ better workmen than ours. No one can build a more durable incubator or one that will show a bigger percentage in hatching results. The difference isn't so much in the cost of manufacture, though we think our many years of experience, our right-down-to-date facilities, and the fact that we have built a quarter of a million incubators, are factors which undoubtedly give us some advantage so far as actual cost of product is concerned, but the great difference is in the cost of selling. We believe in adver-

tising, and we advertise, but we don't indulge in waste advertising. Where others expend thousands we let a few hundred suffice, and depend upon our incubators to further advertise themselves in the natural process of distribution. Again, where another manufacturer will pay \$10,000 or \$20,000 for catalogues and pictures, we spend \$500 or \$600. These things are 'frills,' and while they may

cial track right to the door of our factory, and, with due respect to the other active industries of our little city, we are keeping the switch engine about as busy as any of them. Yes, it pays us to cut out the 'frills' and make our prices only on the incubators themselves."

Kordec Poultry Farm, Prairie Depot, O., breeds S. C. Buff Orpingtons and Buff

A Decided Novelty—the beautiful Black Hamberg Grapes growing in pots on the Owen Farms, Vineyard Haven, Mass.

be worth their cost as 'frills,' still we are satisfied to get along without them—and incidentally we believe our customers are just as well satisfied also. Our 240-egg incubator is worth ten dollars, our smaller size is worth our price. We are kept pretty busy filling orders. Just now we are making daily shipments to all parts of the United States. Cars are delivered over spe-

Wyandottes. They have ten fine pens mated, including all prize winners at Toledo, O. (both shows), Chillicothe, O., Youngstown, O., and Bowling Green, O. Their mating list is ready and is free to all our readers. They have 50 good cockerels and 100 head of hens and pullets yet to sell. All interested parties write at once for catalogue and prices

From Our Factory To You FREIGHT PREPAID On Breese Bros. Rubber Roofing

This remarkable new selling plan will save you money on the highest quality old reliable Breese Bros. Rubber Roofing. This is the most liberal offer ever made on a high grade roofing.

Look at the low prices quoted and compare them with others, and remember that these prices include freight charges. You will find that you cannot buy anything but the cheapest sort of roofing at this price, through a dealer.

We are the only manufacturers of high grade roofing that offer to sell direct to the consumer at wholesale factory prices.

And Breese Bros. Rubber Roofing is the very highest quality on the market.

Every roll of Breese Bros. Rubber Roofing that leaves our factory is covered by our absolute guarantee to be water-proof, fire-resisting and durable.

It is made of long-fibre, wool-felt, saturated in asphalt by the special Breese Bros. process and heavily coated on both sides with flexible, water-proof compound.

Costs one quarter as much as shingle and lasts twice as long.

CONGO ROOFING

THE GUARANTEED ROOFING

One of the most attractive features about Congo is that you get a general Surety Bond with every roll. This Bond is issued by the National Surety Company. Every roll of 3-ply Congo is guaranteed for a period of 10 years.

Thus you are protected for a long time by the strongest guarantee ever issued, backed by a Surety Company whose bond is as good as the Government's.

That Congo is made of the right stuff—durable and lasting, is attested to by the fact that the Surety Company was willing to back it, and for so long a period.

Congo is really a better purchase than ever before.

In addition to the Surety Bond, we furnish with every roll galvanized caps instead of tin caps or nails supplied by others. The galvanized caps can't rust or bend or break. Liquid cement is also furnished free.

We mean to get the roofing trade of the country and think these special features will come pretty near landing it.

Send today for free Sample of Congo and a copy of the Guarantee Bond.

CHAPMAN'S IMPROVED TRAP NEST

were unanimous in declaring the Chapman Trap Nest the leading trap nest in the world. If you want a trap nest that will do the work five years from now as well as today you will want the Chapman Nest. If you wish a nest built upon honor you are sure to find it in this nest. Liberal discounts to agents. Write for catalogue. 3-nest size, \$3; 6-nest size, \$6. Catalogue of Sanitary Drinking Fountains sent free for the asking.

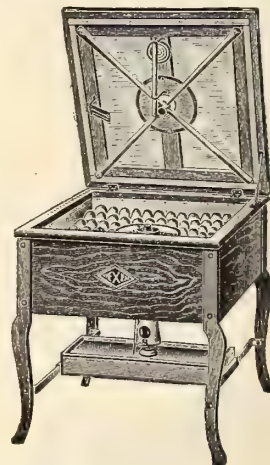

CHAPMAN TRAP NEST COMPANY, 178 Federal St., BOSTON, MASS.

REASONS FOR THE CLAIMED SUPERIORITY OF X-RAY INCUBATORS.

Why should the heating lamp on an incubator be placed on the side? It seems natural that it should be placed under the machine and that is where the X-Ray Incubator has it. The makers claim that it is the only place for it. Hot air rises naturally. It is easier to make thorough distribution of it; there is, therefore, uniform heating of all parts of the egg chamber, and there is a more perfect ventilating system. Uniform heating and a ventilating system which carries off fumes and impure air surely and dependably are of first importance in any incubator. Even if it had nothing else to recommend it, the X-Ray would be ranked as a high-class machine on this account.

But it has other things to recommend it. It requires less oil. The makers claim that it requires only one-third of the oil that other machines do. Two-thirds of the oil is saved and only one filling of the lamp is required for the entire hatch. Most incubator lamps require filling daily or at least every other day. That gives the X-Ray another big advantage.

The X-Ray is certainly a machine to be

considered if you are going to buy. It has a great record as a reliable hatcher, which after all is the real test.

The makers show by their selling plan that they have all confidence in it. They put it out on sixty days' free trial. That is more than time enough for two complete hatches. It makes buyers safe. They know just exactly what the machine is and what it will do before they part with their money. If it does not come up to representations in your hands, you can return it. That is a fair offer. The buyer has nothing to lose. The makers, who know their machines, ought to and do take all the chances.

We reproduce above a cut of the machine which gives a good idea of its appearance. But the catalogue should be consulted for all details. The makers gladly mail it free. Our advice is to write for it. It is manufactured by the X-Ray Incubator Company, Wayne, Neb. A postal request will bring you the book.

A big book full of information and value for poultry raisers is the new 1909 catalog just issued by the Des Moines Incubator Company. This company, now generally recognized as one of the largest manufacturers of incubators and brooders, has been foremost for years in the perfection of machines and supplies, and it would be difficult to conceive of a greater line of proven worth. The days of doubtful experimenting are long past, so far as the Des Moines Incubator Company is concerned. Its incubators and brooders, made in a great variety of sizes and styles though all following the same general design, are known the world over for their excellent results. There are so many features of interest regarding the Successful and Eclipse Incubators and Brooders, the Sanitary Metal Brood Coop and other products of this company that space does not permit us to speak of them in detail at this time, but we want to urge our readers to write Des Moines Incubator Company, Des Moines, Iowa, now while the season is early, for this most interesting poultry book and catalog.

OAKWOOD POULTRY FARM : Marshall, Illinois

A COMMON-SENSE HELPFUL BOOK.

"A few days ago I received an incubator catalog so full of common sense suggestions and helpful illustrations, I decided it at least was a book I wanted to keep," writes a reader of American Poultry Journal.

"I had been undecided whether to buy a 'high' or 'low' priced incubator, because I could not see why there should be so great a difference in the cost of different machines. I opened the catalog at random, and the first paragraph I noticed contained this statement, 'It is safe to say that a man will usually get what he pays for.'"

"That settled the entire price question with me. I knew I wanted an incubator that I could depend upon to hatch all fertile eggs, and that whatever amount I paid for it I would undoubtedly get value received."

This opinion is identical with many others who have seen the catalog describing Banta Incubators and Brooders. It is a book that will well pay reading and study.

Our readers may obtain a copy by sending to the Banta-Bender Manufacturing Co., Ligonier, Indiana, and they will find that it is one of the most helpful books on incubation that has been issued.

OUR WINNINGS FOR SEASON 1908-9.

At Dominion Exhibition, Calgary, July, 1908, we won four firsts out of a possible six; also four seconds and special for best eight birds in the show, all breeds competing.

At Winnipeg, same month, we won first, second and fourth cock; second, third and fourth hen; first and second cockerel; first and second pullet. We did not send our best birds to the West on account of the distance.

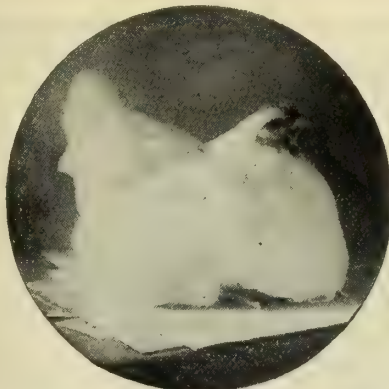

At London, September, 1908, we won every first but one and every second prize offered on both R. C. and S. C. Black Minorcas.

At New York State Fair, Syracuse, September, 1908, we won S. C. cock second, third and fourth; hen first and third; cockerel first, second and third; pullet first, second and third; pen, old,

third (in poor feather); pen, young, first. R. C. cock first and second; hen first and second; cockerel first; pullet first and third; pen first.

At London Winter Show, November, 1908, we won every first and every second but one on both R. C. and S. C. Black Minorcas.

At the Ontario, Guelph (Canada's greatest show), December, 1908, we won on S. C. cock first and third; cockerel first, second and fourth; pullet first and fourth.

WHITE WYANDOTTE.

First hen at Northern Illinois Poultry Show, also special for whitest bird in the show. Bred and owned by S. P. Teeple, Belvidere, Ill.

R. C. cock first; hen first and second; cockerel first, second and third; pullet first, second and third; and all specials.

At Boston, January, 1909, we won on S. C. cock first, second and third; hen first and second; cockerel first, second and fourth; pullet first, second, third and fourth. R. C. cock first and second; hen first and second; cockerel first and fourth; pullet first.

No other Black Minorca breeder on the continent can show a record to compare

with above, and every bird but one was bred at Victor Poultry Yards, London, Ont., the home of Canada's best Rose Comb and Single Comb Black Minorcas. T. A. Faulds, proprietor.

"RINGY."

It is a real pleasure to look at a photograph of a bird, like that offering in this issue of "Ringy." Isn't he stylish? Isn't his barring simply superb? Wouldn't you like to own a bird like this for yourself? You have the chance. We have in the state of Indiana a breeder who breeds just such birds as this sample. This breeder is W. D. Holterman, fancier, of Fort Wayne, Indiana, Box No. 2. Mr. Holterman has established a reputation all over the world as a breeder of the finest and closest barred Plymouth Rocks that have ever been produced. His cockerels are simply remarkable in color and barring. If you want such quality in your stock you simply cannot help going to Mr. Holterman for advice and quality. He makes friends of his customers by his kindly, square and honest treatment, but mostly by the very excellent quality of the stock he sends out. We have just received from Mr. Holterman his new catalogue, which is truly one of the finest, richest catalogues ever sent out by any poultry breeder. This valuable book is sent entirely free to readers of the American Poultry Journal. Every Barred Rock breeder should get one and keep it in his library. It is a book which is indeed worth keeping. It is such books that make poultry history. We ask all our Barred Rock breeders, each and every one, to get this beautiful catalogue and keep it.

POULTRYMEN'S ACCOUNTS.

All poultrymen would prefer to do a strictly cash business and thus avoid the "deadbeat," but this is not always practicable and every busy poultryman will accumulate a lot of accounts that he cannot collect because not all men have the "knack" of getting the money. The Marshall Blackstone Co., Boston Block, Minneapolis, Minn., make a specialty of poultrymen's accounts and it will pay to write them for particulars.

The Ideal

INCUBATORS and BROODERS

Miller Gives You the Key to Success

I've sold so many thousand Ideal Incubators and Brooders that I feel every poultry raiser must be acquainted with them. But here's the all-important question with you: Are you using them? Are you getting the big hatches which only the Ideal Incubators can give you?

And are you succeeding in raising big, strong fowls—and raising 90% of all you hatch—like the users of Ideal Brooders are doing? If not you are suffering a distinct loss.

My poultry raising friend, I cannot afford to misrepresent things to you, but I want to say that there is more profit in the poultry business for you if you use Ideal Incubators and Brooders.

Try The Miller Way This Year

Send today for my great new book, "Poultry For Profit." It will show you what others are doing and open your eyes to what you ought to do in poultry. It's a great book for poultrymen—the best and most reliable ever written. It is not a book of theories, but a book of facts.

TWENTY-THREE YEARS A SPECIALTY.

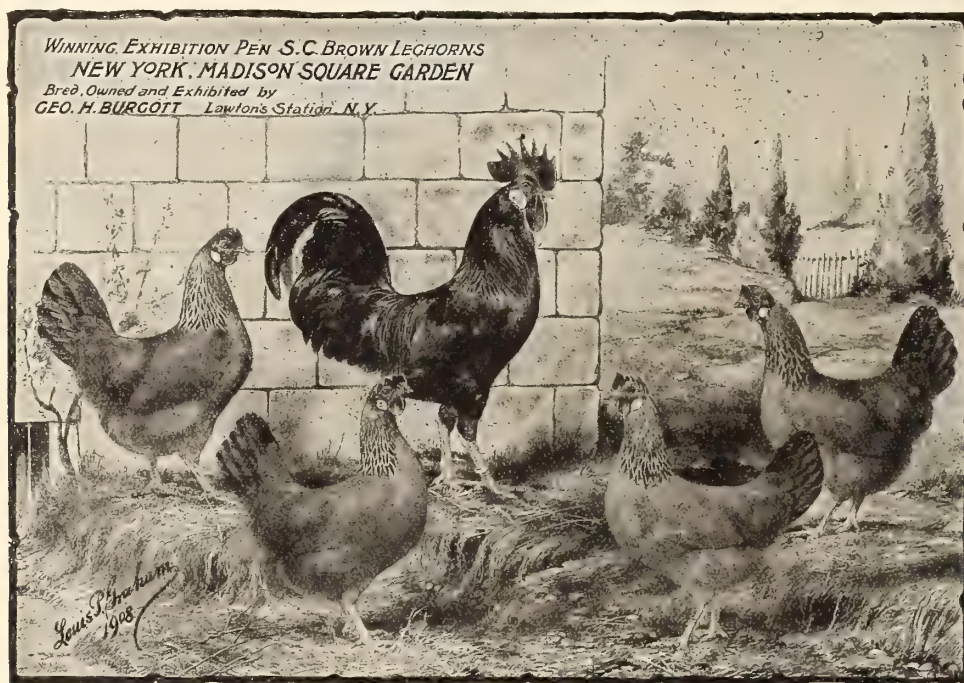

Among our long time advertisers are Geo. H. Northup & Son, Raceville, N. Y., who have a new and inviting advertisement in this issue offering eggs from thirty grand pens of their famous Black Minorcas. The senior member of this firm says that in all the twenty-three years during which he has made a spe-

cialty. Northup farm have won more than 4,000 prizes in strong competition in the United States and Canada and are famous for wonderful winning in many foreign countries as well.

Any of our readers who appreciate a thoroughly fine fowl which is at the same time a grand success in all lines of practical profit, layers of many eggs and large ones, and a fine fowl for the table, ought to write for the catalogue of this firm and read all about this grand breed.

eggs. Traub Bros., Boston Block, Minneapolis, Minn., have some excellent bargains in small farms near the Twin Cities and they would be pleased to hear from all who are interested in Minnesota. They will send map, large book on Minnesota, etc., free.

Miss Lillie Downes, R. F. D. 36, Peoria, Ill., breeder of White Wyandottes, reports the following winnings at the last Havana, Ill., show: First, second and third hen; second pullet; third cockerel, on

GARDEN CHIMES AND MATES.

A winning pen of Single Comb Brown Leghorns, Madison Square Garden, New York. Bred and owned by George H. Burgott, Lawton Station, N. Y.

cialty of Black Minorcas (being one of the first to import and longest to breed them) he has never before mated pens in which he has taken such genuine satisfaction as in the pens he has now mated for the present hatching season. This is saying a great deal when it is remembered that birds from these yards and the produce of eggs sold from the

POULTRY-RAISING NEAR TWIN CITIES.

There are great opportunities for poultrymen in and near the Twin Cities—Minneapolis and St. Paul, Minn. These two cities now have a population of over 500,000 and there is a large demand for poultry and

five entries. Also special for best bird in the show and second pen. See her ad elsewhere in this issue.

BARGAINS IN INCUBATORS AND BROODERS.

Mr. Thomas J. Collier, manager of the Wisconsin Incubator Company, writes us saying: "If I could only convey in some way to your readers the big bargains they get in my 125 egg incubator and 125 chick brooder, both for only \$10, I am sure I would get double the amount of orders." The trouble is so many will not investigate. They let bargains go by, because they won't look into them and thus they lose money. A penny invested in a post card will bring them all the proof necessary that it is useless to spend double my low prices and get no better machines.

I guarantee my machines to do good work, and let the buyer try them 30 days. I pay the freight to all points east of the Rockies. To show you how my machines make good in the hands of my customers, here's a letter which is typical of hundreds more that I have received:

Lewis, Indiana.

Wisconsin Incubator Company, Racine, Wis. Gentlemen:—"The Wisconsin Incubator I purchased from you has given very good satisfaction. Out of the first hatch I got 112 chicks out of 118 eggs, and out of the second hatch I got 118 chicks out of 120 eggs, and the third hatch I got 124 chicks out of 130 eggs. I will recommend your goods to any as the best."

Yours respectfully,

Eliza Church.

"Won't you urge your readers to investigate my machines? A postal will bring my new catalog. My business has doubled every year, and all because I am saving my customers half the cost and giving them perfect satisfaction-giving machines."

Thos. J. Collier, Manager,

Wisconsin Incubator Company,
Dept. 21, Racine, Wis.

MODERN WHITEWASHING.

The Deming Company of Salem, Ohio, have discovered a new method of whitewashing, by which ladder climbing, stooping, reaching, stretching, smearing and swearing are dispensed with. Instead of the usual brush marked, bristle sticking surface, their method insures a uniform

white surface with all cracks evenly filled. They have a specially designed spray pump with large open valves that allow free passage of the liquid, and they furnish the pump with their patented non-clogging nozzle which applies the wash in a fine, even spray. There is no need to reach amongst the spider webs or the dusty corners. The outfit puts the wash where you want it, while you stand some distance away.

It is an outfit that will be of value to every poultryman and one he cannot afford to be without. When through using the machine for whitewashing, it can be put to good use in spraying ordinary gardens, shrubbery and bushes.

A letter to them, inquiring about such an outfit, will bring full particulars by return mail.

It doesn't pay me to farm any more. I have to work so hard to get what little results I do, that I feel like giving it up, unless I can find an easier way. Do you know of any?—Discouraged.

I'm afraid you haven't been progressive enough, but have clung to old methods too long. Why don't you get Planet Jr. implements? They cut down the work enormously, and they certainly give better crops. I understand that two million farmers and gardeners are now using them, so they must be making farming pay somebody. You had better investigate the Planet Jr. the next time you go to town, or write to S. L. Allen & Co., Box 1107 T, Philadelphia, Pa., for fuller information.

C. S. Tait, Brunswick, Ga., breeder of S. C. Black Minorcas, Black Langshans and S. C. R. I. Reds, has mated up some extra fine pens this season and is offering eggs at very reasonable prices, considering quality of his stock. Write him for mating list and mention American Poultry Journal.

BOOK ON ORPINGTONS

THE
SEAL

CYPHERS POULTRY FOODS

Quality Protected By Sealed Bags

If you buy a bag of Cyphers Poultry Foods, look for the unbroken seal and be sure you get it. If you buy in smaller quantities, ask to see the seal on the bag from which the food is taken. Thereby you are protected and sure to get "Cyphers." We guarantee our Poultry Foods to be the best value on the market—scientifically balanced for best results and we want you to get it just as it leaves our Kansas City Mill. That's why it all goes out in sealed bags. When you have satisfied yourself that you have the real goods, compare it with any other food on the market, at any price, and see the difference. Cyphers Foods contain the best grain—always. It's always the same. It is pure food. Cyphers Foods contain

No Weed Seeds to Breed Weeds—No Grit to Add Weight

The Largest Poultry Food Mill in the World is our Kansas City Mill where we manufacture nothing but poultry foods, including alfalfa products—no breakfast foods nor ordinary stock foods; therefore our customers receive absolutely sound, cleanly cut, dust-free grains; not by-products, waste material or sweepings, that remain after putting the better parts of the grains into other foods. Every sack contains a 16-page booklet, "Foods and Feeding," telling how to feed.

Cyphers Chick Food { Health-Giving Quick Growth }

Produces Flesh, Feathers, Bone and Muscle. It aids in preventing Indigestion and Diarrhoea by reason of its well-balanced variety. A pound lost in a young chick's growth can never be regained—once lost always absent—and your chance for winners or early layers has gone.

The Best Foods Produce the Best Fowls—For Show, for Market and for Laying. Therefore it is wise to buy the best. The following is our list of balanced Poultry Foods—all superior and as low priced as we can make them.

CYPHERS CHICK FOOD

CYPHERS SCRATCHING FOOD

CYPHERS DEVELOPING FOOD

CYPHERS FORCING FOOD

CYPHERS LAYING FOOD

OUR EGG FARM is the largest and best equipped of its kind in Wisconsin, if not the Northwest. We produce the highest grade of Table Eggs, summer and winter, which always sell at a premium. Our fowls are Single Comb White Leghorns raised by us from eggs bought of C. H. Wyckoff, Aurora, New York. Our breeding stock has been selected from the yearling hens, mated with the most perfect and vigorous cockerels. We will use most of the eggs from these matings for hatching chicks for our next winter's layers, but have a limited supply to sell. Our price is \$1.50 for 15; \$3 for 50; and \$5 for 100. Send for booklet. Bechtner & Son Co., Waukesha, Wis. 4-2

Day Old Chicks 10c Each Incubator Eggs 5c Each

IN QUANTITIES

White and Barred Plymouth Rocks S. C. White and Brown Leghorns White Wyandottes

I have secured a ten-acre poultry farm that represents an investment of \$10,000 and have bought the best utility birds I could get, besides my own birds, and have moved from the poultry farm I have been on for years to this one. I have a fine place. Every breeding pen has a 10 by 24 foot house, half of it open scratching shed, and a run 24 by 100. Some of my breeders scored 95½ and 96 this season. My incubator cellar is 30 by 40 feet built of stone with cement floor. Driven well 150 feet deep. Every bird is in a pen and every egg laid is from a thoroughbred. If you buy eggs or chicks from me you get what you pay for. Isn't this better than buying from free range stock (where there are visiting neighbors)? My limit is twenty-five 360-egg incubators, so if you want chicks or eggs order early. My 16-page free catalogue tells all. Address

VASS' Buff, Black and White ORPINGTONS

acknowledged the world best. Are you looking for eggs that will produce winners for next winter show? Remember, from setting of Black Orpington eggs I sold last spring a cockerel was hatched that \$100.00 was offered for this cockerel and the offer was refused. Remember my birds have won with different judges at America's leading shows like Pan American World's Fair St. Louis, Boston, Jamestown Exposition, Easton, Pa., and Madison Square Garden for the last nine years. They have stood the test for years and not only winning for me but in hand of many customers. A few choice large birds for sale reasonable. I am the oldest Buff Orpington breeder in the U. S. Egg orders booked now from the finest flock of Orpingtons in America. Write for prices. Booklet free, Satisfaction guaranteed. C. E. VASS, Washington, N. J.

Our New Poultry Book

ORIGIN AND HISTORY OF ALL BREEDS OF POULTRY

Illustrated With 198 Colored Pictures of Chickens, Ducks, etc.

This is without doubt the finest and most complete work on poultry ever produced. It gives the origin and history of all the recognized varieties of poultry up to the present time. Also tells how to mate the different breeds for best results. Price of this book is \$1, but we offer you the following combination:

Origin and History of all Breeds, etc. } All For
American Poultry Journal one year } \$1.50
Farm-Poultry one year : : : }

This is the greatest value for the money ever offered to poultry readers. The book alone will give you information that you cannot obtain from any other source, and we have made the price so low that it is within the reach of every one. Send all orders to

AMERICAN POULTRY JOURNAL PUB. COMPANY

BUILD YOUR OWN INCUBATORS AND BROODERS

CATALOG

and Save One-Half the Purchase Price

Anyone can do it with my Plans. I furnish the mechanical parts Lamps, Regulators, Heaters, etc., at low prices. You simply make the box or case. Many thousands have done it and I have yet to learn of a single failure. I will send you my catalogue free or for only 25c to cover cost. I will send you prepaid my big illustrated book of plans worth dollars to you. These plans are so simple, the instructions so complete, it is impossible for you to go wrong. You save half the purchase price and get the advantage of my exclusive patented features not found on other machines. Most prominent among these are

My Acme Tandem Thermostat and Acme Trip Burner,

with combined damper and flame regulator—will save half the oil, labor and cost of operation.

These wonderful inventions are not to be found on any incubator you buy. I do not sell or build incubators—I only manufacture incubator supplies. I have been an incubator specialist for 20 years—the only one in the world. When you get my book you will see how easy it is for you to build a high-grade, practical Incubator or Brooder, having many exclusive features (all in favor of the inexperienced operator) which are not found on any other make.

My New Acme Tandem Double-Compound Thermostat, the most powerful, accurate, durable and reliable thermostat ever invented, will increase the efficiency of any incubator or brooder—it marks a new era in artificial incubation in heat regulation—it eliminates all regulation troubles.

My Acme Trip Burner

will make 20% more heat with less oil than any other burner. The combustion is perfect. The wick never chars. Absolutely safe, will last a lifetime, and with my Tandem Thermostat and Acme Regulator (having knife-edge bearings throughout) saves 50% in oil consumption by automatically lowering the flame when heat is not needed and raising the flame when more heat is required. This increases the hatch, saves time and worry, and cuts operating expenses in half.

My New Tubular Tank, with heat-retaining and distributing bars, produces a uniform temperature throughout the egg chamber, using one-third less oil than any other system of heating.

If You Have an Incubator or Brooder

it will pay you to send for my plans and catalog, then at a slight expense you can remodel your old machine and make it a profitable and permanent investment.

Write today and let me tell you all about my Lampless Brooder which costs you less than \$4 to build. No lamp, no tank, no expense to operate. Catalog showing complete line of fixtures and supplies free. You have all to gain and nothing to lose—send for book today.

FERRIS' S. C. WHITE LEGHORNS

Winners at Chicago, St. Louis, Toledo, Detroit, Grand Rapids and the Michigan State Fair.

At the recent Toledo show we won five prizes on six entries and wherever they are exhibited Ferris' White Leghorns get the cream of the prizes. Their typical shape and stylish appearance, pure white plumage, good heads and low tails place

them among the winners anywhere.

We have six exhibition matings this season, every one of which will produce winners because everyone is composed of winners and they are mated right. Eggs \$3.00 to \$8.00 a setting, or you can buy chicks at double the price of eggs.

Our utility matings contain females scoring from 90 to 94 and these are mated with males we are keeping to sell for exhibition next winter. Every bird in these pens is related to our winners and will produce chicks of exceptional quality. Eggs only \$1.50 a setting, \$7.00 a hundred, \$60.00 a thousand. Chicks 20 cents each for less than fifty, \$16.00 a hundred, live arrival guaranteed.

We guarantee eggs to be 90 per cent fertile and replace infertile ones free of charge. Can send them safely anywhere in the United States or Canada.

Our Strain Is Bred to Pay—We give particular attention to size, health, vigor, the three things most necessary to insure a heavy egg yield.

Write for mating booklet and catalog giving prices, list of winnings and full particulars regarding this strain of winners bred to pay.

{ 1st PRIZES on COCKERELS—MORE by 50 per cent }
{ 1st PRIZES on MALES—MORE by 42 per cent }

than any other exhibitor has won on ANY STOCK

OUR "LEE BELLES"

Again Demonstrated Their Superiority by Winning First Prize in Each of the two Largest Shows of '06-'07 Season, also the Championship Prize in what was considered the Strongest Female Competition of the Year, and since have made other Phenomenal 1st Prize Records.

FOR SALE: Breeding and SHOW BIRDS, both old and young, bred from these same lines of New York and Boston First Prize Winners. We also make a specialty of furnishing Carefully Mated Trios and Pens for breeding Exhibition Cockerels or Exhibition Pullets.

EGGS for Hatching from Best Pens Only, \$7 per 13, \$20 per 39, \$48 per 100, from either cockerel or pullet pens and from such matings as have furnished our egg customers a Grand Lot of First Winners in the past and we believe WILL DO SO AGAIN. We have retained in these pens the Finest Lot of Breeders, both old and young, WE EVER HAD TOGETHER and we expect to give to those buying eggs the best value we have ever shipped them.

Bradley Brothers' Customers CAN Win First

FIRST PRIZE AT CHICAGO (Again From Eggs)

I enclose feather from 1st Chicago Hen and I want to thank you for sending me such choice eggs. The 1st Cock and 1st Hen were hatched from eggs I bought of you; also 4th Cock and 3d Hen. The 1st Cock was sire of the 1st Cockerel 1st year, and the 4th Cock sired the 3d, 4th and 5th Cockerels. The 1st Hen was in a class by herself as far as quality was concerned. You may use any part of this letter as you see fit.

Naperville, Ill., Jan., 1909.

Edgar G. Simpson.

I won 1st at Springfield, Ohio, with the Cockerel you sold me. I also won 1st and Silver Cup on Pullet at the same Show, and 1st Pullet and 4th Hen at Indianapolis—with birds from your stock. H. W. Barnett.

Springfield, Ohio, Feb., 1909.

Just returned home from the State Show at Detroit. I won 1st, 4th and 5th Cocks, 1st and 5th Cockerels, 2d Pen, best Display and numerous Specials, in the strongest of competition with leading breeders from several States. All of these birds are of your breeding pure.

Saint Johns, Mich., Jan., 1909.

A. W. Tolles.

The "Lee Belle" Pullet I bought of you scored 94½ points and tied for 1st at our show.

Peter T. McGovern.

Pittsfield, Mass., Jan., 1909.

My 1st prize Cockerel at our Show, score 94½, was from the setting of eggs I bought of you.

W. H. Wait.

Dalton, Mass., Jan. 1909.

The Cockerel came in good condition. He took 1st easily, and his lead gave me 1st Pen.

Guy F. Newcomb.

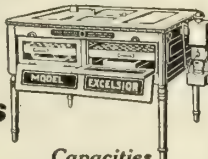

Great Falls, Montana, Jan., 1909.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winter of 1907-1908 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

The Peerless "Ringlets"

True to Their Tradition,

Are Again Great Winners at New York

"Ringlet" First Prize Cock at Madison Square Garden, New York, Winter of 1907-8

At the Imperial Madison Square Garden Show, December 29, 1908, to January 2, 1909,

E. B. Thompson's Barred Plymouth Rocks

win First and Third and Special Prizes on Exhibition Pens; second and special prize Cock; second and special prize Cockerel; numerous specials on hens and pullets, and the Harding \$50 Challenge Silver Cup offered for best exhibition pen.

The race at this 1909 New York Show was a Marathon for speed and quality, and my First Prize Silver Cup Exhibition Pen was declared by expert opinion to be the finest ever exhibited---a paragon of perfection---and created a sensation as the finished achievement in modern Barred Rock breeding---unequalled in the annals of poultry shows. The sun never before shown on such a masterful exhibit.

The "Ringlets" are always imitated---but never equalled

They are first in record, first in quality, and

first in popularity

Their record at New York for 22 years is GOLD LINED

—it is a calendar of successive victories demonstrating step by step their irresistible advance towards the world's absolute leadership

"RINGLET" EGGS ARE THE BEST THAT MONEY CAN BUY; THEY PRODUCE PRIZE WINNERS AND WILL MAKE YOU MONEY

Mr. E. B. Thompson,

Walworth, Wis., Dec. 12, 1908.

Dear Sir: Our poultry show has just closed and I am now ready to report the success I had with the chicks hatched from your "Ringlet" eggs. I hatched 17 chicks and succeeded in raising all of them. I entered nine birds in the show, five cockerels and four pullets, and won eleven ribbons, winning 1st, 2d, 3d and 4th prizes on pullets, 2d, 3d and 4th on cockerels, special prize for best colored male, special for best shaped female, special for highest scoring female, and first prize on exhibition pen. I am greatly pleased with the results and want to be entered as one of your regular customers.

Yours very truly,

H. L. Radebaugh.

SUPERIOR TO SHINGLES!

Special Offer to Readers of American Poultry Journal

Fill in carefully coupon below. Mail it to the Chicago House Wrecking Co., Chicago, at once. We will send you, free of all cost, samples of the very best roofing, ceiling and siding made. These samples are large and generous enough to give an idea of the quality of the large sheets from which they are taken. Or drop a postal saying, "Send free samples of Galvanized Iron Coverings as advertised in ORANGE JUDD FARMER." Sign your name and address, carefully, in full. These samples are absolutely free. Send no money or postage. Our galvanized rust proof iron (see No. 1) is made of the very best grade of specially manufactured iron sheets. The galvanizing process protects these sheets from rust for all time. This thorough coat of non-corrosive metal—tin, lead and zinc—called spelter, is made a part of each sheet through the special dipping process employed. This gives the heaviest possible coat of galvanizing necessary for any covering purpose. Galvanized iron roofing has been used for over 60 years. It has always been and is today the best material for covering buildings made. Keeps buildings warmer in winter and cooler in summer. Positively does not taint your rain water—is never injured by contraction or expansion.

Suitable for Farm Houses, Barns, Stores, City Dwellings, Poultry Houses, etc.

Galvanizing is the life of a metal roof. Our light weight sheets with their heavy galvanizing give better service, besides saving considerable in freight. Do not require painting. Have a mottled, sparkling effect, pleasing to the eye.

Anyone can lay our galvanized rust proof coverings. Ordinary hatchet or hammer are the only tools needed. No experience required. **Illustration No. 1** is Corrugated (galvanized rust proof iron), an all around covering. It is the best. Suitable for ceiling, siding or roofing. Corrugation 1½ inches apart—inch closer than others. Makes a firmer and better looking sheet.

Illustration No. 2 shows the "V" Crimped Roofing (galvanized rust proof iron) suitable for roofing only—makes a splendid water-tight roof—requires "V" sticks to put on.

Illustration No. 3 shows Standing Seam Roofing (galvanized rust proof iron), requiring set of tools furnished at low price. Makes first-class covering for any kind of a building.

Many fires originate on shingle roofs. The natural life of a shingle is less than ten years, besides requiring constant attention. The quality of shingles grows poorer each year.

Excels Ready Roofings in Every Way!

Compared to ready roofing, whether rubber surface or felt, cost considered, metal roofing will outlast it 8 to 1. Patent prepared or composition roofings crack and curl with age. Tar roofings rot and spoil. Most ready roofings soften in the warm air and sun. They stick to your feet when walked upon.

Better than Slate. Slate weighs seven times as much and will break from freezing and thawing.

Illustration No. 4 shows Plain Flat Sheets (galvanized rust proof iron), suitable for many special purposes, such as lining, ceiling, roofing sheds and buildings and innumerable purposes independent of roofing, siding or ceiling. It can be soldered.

Illustration No. 5—Beaded Ceiling or Siding (galvanized rust proof iron) makes a handsome ceiling or siding. Easy to apply—suitable for stores, etc.

Illustration No. 6—Brick Siding (galvanized rust proof iron), an exact imitation of regular brick—most suitable exterior for buildings of any kind. Easy to apply, requiring only nails and hammer.

\$1.60 to \$3.25 PER SQUARE!

Our Galvanized Rust Proof Iron Coverings

These six galvanized rust proof iron coverings come in sheets all 6 feet long. Can supply sheets 2, 3 and 4 feet long. Flat sheets are 26 inches wide. All others 24 inches wide, sold by the square of 100 square feet, not including lap. Prices as follows:

Flat, per square \$3.00
Corrugated and all other designs, per sq., 3.25
When ordering mention lot No. 18

Our Semi-Hardened Steel Roofing (Not galvanized)

In addition to this galvanized iron, we have a plain light-weight steel roofing of superior quality. It is good for general purposes and can be painted after it is on the roof. Sheets when laid are 24 in. wide and either 6 or 8 ft. long. All other patterns, except the brick siding, are 22 in. wide and either 6 or 8 ft. long. Furnished either painted or unpainted. Prices as follows:

Flat, per square \$1.60
Corrugated and all other designs, per square, 1.85
When ordering mention lot No. 10.

SPECIAL FREIGHT PREPAID OFFER!

At above prices we'll prepay freight in full to all points east of Colorado in the U.S., except Oklahoma and Texas. 15c per sq. additional for these two states. To all points west of Colorado in the U.S., 50c per sq. additional.

THAT'S A BARGAIN

A NEW DISCOVERY! WHICH WILL POSITIVELY DETERMINE THE FERTILE EGG BEFORE INCUBATION

"XX" means fertility.
Every good egg registers
at some point on the
scale of "The Breeders'
Magic Egg Tester," according to its condition, and
this wonderful little instrument tells instantly whether
an egg is fertile or not BEFORE incubation. The
scale reads like a thermometer and so easy that any
10-year old child can test eggs. The fertile eggs
register at "XX" and the tester never fails to tell
whether fertility is strong, weak or absent.

A well-known poultryman of Western New York says:
Niagara Falls, N. Y., Jan. 19, 1909.
"Used your Breeders' Magic Egg Tester since Aug. 1908. 100% correct in all kinds of tests. Simply perfect. Invaluable." F. C. Seiler.
Breeders' Magic Egg Tester sent complete, ready to use, by mail post-paid \$2.00. Write for circular. Demonstrated in the Poultry Department at Buffalo Agricultural Fair with over 500 sales in the county. Order filled on day received. Money refunded in every case if not satisfied.

Poultry Secrets Disclosed

WE OFFER to all poultry raisers the essential knowledge and secret methods of America. As a rule these secrets have been guarded with extreme care, for it is on them that the great successes have been built. They have cost years of labor and thousands of dollars. They will cost YOU only a trifle and a few minutes to write us.

How We Obtained These Secrets

Michael K. Boyer, poultry editor Farm Journal, has had exceptional opportunities and the closest friendship with the poultrymen all over the country. They have freely told him many of their most jealousy treasured secrets, many others we have bought, and this scattered material, together with several of Mr. Boyer's own other valued methods, has now been collected in book form. It must be clearly understood that **every secret printed has been obtained in an honorable way.**

Dr. Woods' Egg Secret

Dr. P. T. Woods authorizes the publication of his system for producing large quantities of sterile eggs for market. Every poultryman who raises eggs for market must know Dr. Woods' method to be up with the times, and every householder who supplies only his or her own table will appreciate an increased quantity of the highest quality eggs for table use.

Secret of Fertile Eggs

Boyer's secret of securing fertile eggs by alternating males we believe is worth \$100 to any big producer of eggs for hatching, either for his own incubators or selling to others for fancy stock. It is something new, and the diagrammatic illustration furnished by Mr. Boyer makes the matter so plain that the novice can easily understand it. This system is already practiced or about to be introduced in many of the largest plants in the country.

Selecting the Laying Hens

Since the production of eggs is the very basis of the poultry industry, the ability to tell the laying hens in the flock quickly, without the aid of trap nests, will put dollars in your pocket. Do not keep on feeding the robber hens.

Here Are A Few More of the Secrets:

- 1 Secret of Philo System
- 2 Woods' secret of laying food
- 3 Proctor's salt secret
- 4 Mendel's chart of heredity
- 5 Truslow's secret of high prices for ducks
- 6 Hunter's secret of success
- 7 Gowell's fattening secret
- 8 Burnham's system of mating fowls
- 9 Brackenbury's secret of scalded oats
- 10 Secret recipes for chick feed; practically the same food as is now sold on the market at a high rate
- 11 Secret of 200 eggs per hen per year
- 12 Woods' secret of saving weak incubator chicks
- 13 Secret of telling age of poultry
- 14 Secret of preserving eggs—the only way
- 15 Secret of celery fed broilers
- 16 Secret of fattening turkeys
- 17 Incubator secrets
- 18 Broody hen secrets
- 19 An exposure of the methods employed by some fanciers to kill the fertility of hatching eggs

THERE ARE SCORES OF OTHERS

I. K. Felch's Mating Secret

Many years ago Mr. Felch, one of the best known figures in the poultry world, published his breeding chart, but later realized its great importance and value to him he withdrew it and kept the information for himself. He has now given Mr. Boyer permission to use this system and it is included in this book.

The Secret of Feed at 15 Cents a Bushel

An enterprising poultryman has been advertising this secret for \$5.00 and by pledging those who buy it not to disclose it to any one else; it has, however, been known to a few poultrymen, Mr. Boyer among them, and the method is fully explained in "Poultry Secrets."

So-Called "Systems" Explained

A number of "systems" and secret recipes have been and still are sold at high prices. Some are good, but not new; some are new, but of little value. Some are worth the money paid for them. Poultry Secrets gives the facts.

Of course we cannot go to the length of saying that all the information in the book is new to everyone. It is said there is nothing new under the sun, and the Egyptians were hatching eggs by artificial heat centuries ago; but we do say that to the great majority of poultrymen these secrets are absolutely unknown.

I WANT YOU

to get my new, handsome Fashion Book,

HUNDREDS OF LATEST STYLES

with illustrated lessons on Cutting and Dress-making, **FREE**, and I will sell you all the patterns you want for five cts. each. They are the same patterns you have always paid 10c & 15c for at the stores, made by the same people, and correct in every detail.

I publish the **FARMER'S CALL**, a weekly paper for every member of the family. An especially interesting feature each week are the children's letters; and the Woman's Department is unusually strong and instructive. Among the special features for women folks is its fashions in which I show the 5c patterns. Let me help you to save money.

MY SPECIAL OFFER

Send me 35c and I will send you the **Farmers' Call** every week for one year (about 1000 pages) and will send my big Fashion Book to you free. I also agree to sell you any pattern you want thereafter for 5c. I can sell them for 5 cts. because I buy them by the thousands and don't make any profit. I don't want any profit. I want your subscription to the **FARMER'S CALL**. You will save many times the cost of my offer in a year. **WRITE TO-DAY.**

You can use this coupon cut it out now and mail to me with 35c—1c and 2c stamps taken, but a quarter almost always goes safe:

Are You Successful At Raising Chicks?

YOU wish you had the "knack" of raising chicks like some neighbor you know. Don't get the notion that there is any special gift required to raise chicks. You can succeed as well as your neighbor if you will follow the plain, necessary rules. The most important of these rules, and yet the simplest and plainest, is **Feed Right**. Chicks will eat almost anything. But remember, it's not what goes into the crop, but what they digest that gives health and strength and makes them grow.

Try Feeding Darling's Chick Feed

That's the safe way. You are not experimenting. It is scientifically prepared. It has proven for hundreds and hundreds of poultrymen that it does get the results they want. It contains the elements chicks must have. It does not contain things that injure. Chicks eat it and digest it, and they keep well and grow. Its reasonable price given below is f. o. b. Chicago or New York, cash with order.

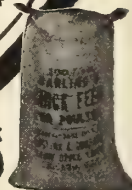

Scratching Food, Forcing Food, Beef Scraps, Laying Food, Oyster Shells, Mica Crystal Grit. Get free catalog for particulars on the Darling Poultry Food line.

Flower Offers

Without Cost to You

Five Beautiful Roses (Order as No. 101)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Five Fragrant Carnations (Order as No. 109)

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you **FARM AND FIRESIDE** for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. **FARM AND FIRESIDE** prints and circulates each month more copies than any other farm paper. That shows how well it is liked!

Send your order promptly to FARM AND FIRESIDE, Dept. D, Springfield, Ohio

How to save money on poultry literature for 1909. Three of the best poultry publications, practically supplying the entire needs of a poultryman, furnished for one-half the regular price. * * *

Our Big "3" Combination

American Poultry Journal } All Three for
Western Poultry Journal } **75c**
Farm-Poultry }
Regular price \$1.50

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 20th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 40th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

This is the Greatest Combination Ever Offered by a Poultry Paper

and is especially so when you take into consideration the fact that American Poultry Journal will during the coming season, publish one more of those handsome colored plates of poultry, which alone is worth the price of a year's subscription to any one interested in thoroughbred fowls. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Cyphers Style B or C Brooder as used for colony coop for older chicks; Fire-Proofed, Insurable. This Brooder Saves Buying a Coop or Colony House.

Cyphers 1909 Incubator
Fireproofed, Insurable

CYPHERS 1909 BROODERS

AND INCUBATORS—FIRE-PROOFED, INSURABLE

ALL SELF-REGULATING

EVERY ONE of Cyphers Complete Line of 1909 Brooders is Self-Regulating, as well as Self-Ventilating.

The trouble with most brooders in past years has been their variable temperature. The result—Chicks die in large numbers. Chicks must have an even temperature in the brooder. When the temperature changes frequently the result is shown by diarrhoea in chicks or a general ill-health, during which their heads seem to grow faster than their bodies. The fact is their bodies are at a standstill—making no growth. Later they die. **YOU LOSE!**

To ensure a regular temperature in a brooder two things are necessary, namely: First-class construction with material to hold the heat; then a Regulator to govern it. Last year Cyphers Company equipped its highest-priced brooder—the Best Brooder on the Market—with a Regulator, and the results were so satisfying, the brooder so popular, that this season we have put Regulators on all our Brooders. Cyphers Brooders are so well built that it is easy to hold the heat in them, and the only thing needed to make them perfect was the addition of a regulator similar to that used on our Incubators. This they now have—everyone of them, from the highest priced to the cheapest. Once more Cyphers Company offers customers the latest improvements in advance of all competitors.

Get a Brooder with a Regulator! DON'T LET YOUR CHICKS DIE

on account of poor brooders when you can take your choice of Four of the Latest, the Best Constructed, Fire-Proofed, Insurable, SELF-REGULATING, Self-Ventilating Brooders. When it comes to saving the lives of chicks that you have gone to the trouble and expense of hatching, **YOU CANNOT AFFORD TO GET ANY BUT THE BEST BROODER—THE SELF-REGULATING KIND.**

Do You Want a Low-Priced Brooder

yet one that is perfect? Our Adaptable Brooding Hover will meet your requirements. It consists of Heater, Hover, Lamp, Thermometer, in fact, everything necessary except the box. (See illustration above). You can put it in a dry goods box; or piano box, or make a home-made brooder for it. You can use it without a box or brooder by putting it in a chicken coop or any other building. This Adaptable Hover and Cyphers Complete Line of Brooders are fit companions to

Cyphers Insurable Incubators The World's Best Hatchers

Cyphers Incubators are Used by More Government Experiment Stations; by More Large, Practical Poultry Plants; by More Leading Financiers and Exhibitors; by More Large, Successful Duck Farms than All Other Makes Combined.

WRITE TODAY FOR BIG, FREE, 212-PAGE Illustrated Catalogue with illustrated chapters on Feeding Chickens, Laying Records, Incubating, Brooding, and "What the Poultry Business Is." It tells about the New Rules of the Fire Insurance Companies; gives photographs of standard-bred farm fowls and prize winners at America's big shows; photographs of the highest-priced birds ever sold; about seventy pictures of the world's biggest poultry and duck plants and experiment stations; over fifty photographs of leading breeders; illustrations of over seventy different articles manufactured by Cyphers Company, who operate the largest Incubator, Brooder and Poultry Supply Plant in existence; tells all about our Electric Hatchers and Brooders, and the Mammoth Incubators, holding 8,000 to 40,000 eggs each. It is free to you if you mention this paper. Address nearest office:

Sure Hatch Incubator BOOK FREE

This book tells the secret of its marvelous success as a hatcher. It tells some startling facts about incubators—facts you should know before buying. Practically turns all makes of incubators inside out. Shows why many that sell at "bargain" prices hatch more trouble than chicks. Explains the correct principles of incubator construction. Don't buy an incubator at any price until you read this great book.

IN QUANTITIES

Barred Plymouth Rocks, Single Comb
White and Brown Leghorns

I have a ten-acre poultry farm that represents an investment of \$10,000. I have a fine place; every breeding pen has a 10 by 24 foot house, half of it open scratching shed, and a run 24 by 100. Some of my breeders scored 95½ and 96 this season. My incubator cellar is 30 by 40 feet, built of stone with cement floor. Every bird is in a pen and every egg laid is from a thoroughbred. If you buy eggs or chicks from me you get what you pay for. Isn't this better than buying from free range stock (where there are visiting neighbors?) My 16-page free catalogue tells all. Address

PEERLESS POULTRY FARM

GEO. WENDT, Prop. Box 7 Kenton, Ohio

THE WORLD'S BEST WYANDOTTES

Golden, Silver, White and Blacks. Our matings this year were never so fine. They contain all of our N. Y., Chicago, Cleveland, Cincinnati, Columbus and World's Fair winners. These matings are simply wonderful, every specimen in them is of rare merit. Remember, I have won over 200 prizes in my Wyandottes at Madison Square Garden, N. Y. Our birds are blue bred for more than a quarter of a century. Blood tells, as the Keller strain wins in all the leading shows of this country. You can raise winners from our eggs and the price is right. One setting for \$3, two settings for \$5 or \$18 per 100. 500 head of the finest birds yet to spare at prices that will sell them; also Golden Sebright Bantams and Scotch Collie pups from imported champion stock. Our large circular tells of America's largest Wyandotte farm, free. Profusely illustrated.

IRA C. KELLER : BROOKSIDE FARM : Box 75, PROSPECT, OHIO

ROSE COMB REDS

Clearance Sale of one hundred choice Reds, Princess strain. Winners at Cincinnati, Hamilton and in the hands of our customers wherever shown. Must have room, hence the price is \$3 each for males and \$1 for females. Eggs from exhibition pens \$2 per 15 straight. Indian Runner Duck eggs, \$1 per setting of eleven.

F. E. WILSON, R. R. 9, College Hill, Ohio

NOFTZGER'S PARTRIDGE ROCKS

Winners for me and my customers all over the United States. They will win for you, too. Send for catalogue of the greatest of all new breeds. Twelve grand pens mated. Ask any judge what he thinks of Noftzger's.

S. A. Noftzger Originator of Partridge Rocks Route 8, North Manchester, Ind.

Graves' White Rocks and White Wyandottes

are not only winners in the show room, but they breed as well. Look at the record made with 100 eggs taken from all pens: 8 taken out first test, 6, 2d test, 5 broken; hatched 70 chicks. Eggs from pen headed by 1st ckl., \$10 per set, all others \$5. After May 15 ½ price. Mating list free

W. R. Graves, Rte 3, Southboro, Mass.

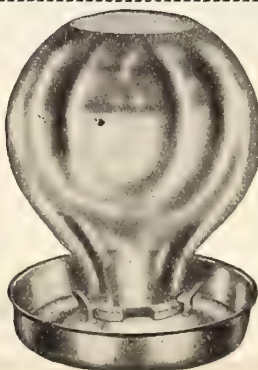

BOB III—Winner of the Blue three seasons

PRIZE-WINNERS THAT PRODUCE PRIZE-WINNERS — NOTHING BUT

S. C. W. LEGHORNS

Send your order in at once for eggs for hatching. Drop a card for my free mating list. Eggs from best pens \$5 per 15; or \$8 per 30. Also have eggs at \$3 per 15, or \$5 per 30. Orders booked for eggs at half price to be delivered after May 15. Address

HARMON BRADSHAW, Box A, LEBANON, IND.

CHAPMAN'S SANITARY FOUNTAIN

is the most sanitary poultry fountain in the world today. The reservoir is made of 3-16 inch walls of glass reinforced to ¼ inch where it locks with the pan. It will stand all kinds of abuse before breaking and can be easily cleaned. With the unsanitary conditions of poultry fountains as they are today, is there any wonder at the great death rate in the poultry yards, especially among the chickens. More deaths occur from polluted water than in any other way. This fountain is what you have been looking for. Write for a catalogue. Fountain with glass reservoir and metal pan, capacity 5 qts., \$1; galv. iron, complete, capacity 1 gal., 80c.

Chapman Trap Nest Co., 178 Federal St., Boston, Mass.

Arnold's Columbian Wyandottes

Prices of eggs greatly reduced. 200 to 500-egg orders at prices that will be worth looking after. Write at once; mention this paper.

Aug. D. Arnold, Box 777, Dillsburg, Pa.

HOUDANS OF QUALITY

Winners of the blue at America's largest shows, and in competition with the largest Houdan breeders of this country. Send for my 1909 free mating list. 30 grand pens mated for exhibition and utility. 300 choice breeders for sale after July 1st. Eggs at one-half price after the first of June.

DR. G. W. TAYLOR, BOX A, ORLEANS, INDIANA

Member A. P. A. and Amer. Houdan Club: I am in no way connected with Nat'l Houdan Club

FISHEL'S WHITE WYANDOTTES

are conceded by all to be the World's Best as a utility fowl, as well as an exhibition strain. Their ability as layers has never been equaled, let alone surpassed. Their winnings at the principal shows put them in a class by themselves. The price of

EGGS

will be reduced May 20th to **half price**. \$5 eggs at \$2.50; \$10 eggs at \$5. Orders for half price eggs will be filled in rotation, so order at once; we will ship promptly on the 20th. There were a great many disappointed last season by not getting their orders filled, but their money refunded. Send your order in at once and get eggs from stock that **will**

PRODUCE WINNERS

The Incubator YOU Want is the One That Hatches the MOST "Livable" Chicks

Put Your
Confidence
In this Machine
You'll make no
Mistake

It makes no particular difference to you on what principles a machine hatches—**BUT**

It does make a big difference to you how many "livable" chicks you get from each hatch.

The common trouble and serious disadvantage of all other incubators is the great number of chicks that "die-in-the-shell" and also soon after being hatched.

What you and every other buyer of an incubator want is a machine that hatches *chicks that live*.

When we tell you *we have that incubator—the one you want*—one that without any "fuss" or bother, *hatches chicks that live* and the most of them, we don't base our claim on *theory* or *guesswork*, but instead, on actual, practical results *already* obtained by those who are operating Prairie State machines. For instance, read Mr. Leon L. Hough's letter here on the right. Now read the other letters below.

Don't they prove conclusively that the Prairie State are the machines you want?

12,000

Big Strong Chicks

Were hatched by me in Prairie State Incubators during April, May and June this year. The hatches averaged better than 90 percent, and went as high as 98 percent. These chicks were shipped as far as 2,000 miles with only seven reported dead in the whole 12,000. How is that for vigor?

LEON L. HOUGH.
Canisteo, N. Y.

Prairie State Incubators and Brooders

Pine Bluff, Ark., Sept. 14, 1908.
Blanke & Hank Supply Co.,
St. Louis, Mo.

Gentlemen:—The Prairie State Incubator that I purchased of you in the spring does fine work. I have never had any experience with one before, yet I took off 3 hatches, all over 80 percent of the fertile eggs. It not only hatches big percent, but it hatches big, strong, lively chicks, the kind that live and grow right from the start. I will need another before long.

Respectfully yours,
(Signed) A. P. RYLAND,
"The Chicken Man."

Orchard Hill Farm,
Brookfield, Wis., July 18, 1908.
Hunkle Seed Store,
327 Chestnut St., Milwaukee, Wis.

Dear Sirs:—The Prairie State Sand Tray Incubators I purchased of you are the finest hatching incubators I ever run. I found the chicks hatched in them lived better, were stronger, more vigorous and full feathered than those I hatched in the —. The Sand Tray

solves the moisture problem. I got larger hatches and less dead chicks in the shell. I have traded off my other incubators and installed the Prairie State. By using them I get more and better chicks. With best wishes I remain,
Very truly yours,
A. E. WILLIAMS.

Oakham, Mass., June 23, 1908.
Prairie State Incubator Co.
Dear Sirs:—I like the Prairie State machine I bought very much. Of the 3 hatches I averaged 85 percent or better, and no cripples or weak chicks. The chicks were larger and stronger than those hatched in another machine without sand trays—lost none by sickness. Sold about 300 in all this spring, and as far as I have heard the parties are well pleased with their chicks. I find I can run the machine on one-third the oil it takes to run any other hot air machine. I never had such big, strong hardy chicks as I got this year from the Prairie State. I am perfectly satisfied with the work it does.

Yours truly,
MRS. M. W. EDSON.

have been improved each year and are without doubt the most satisfactory on the market.

Our new catalogue is just off the press, and you will find it one of the most practical and helpful books on artificial incubation. Tells how we overcome the heavy loss both from "dead-in-the-shell" and "white diarrhoea." Write for book today.

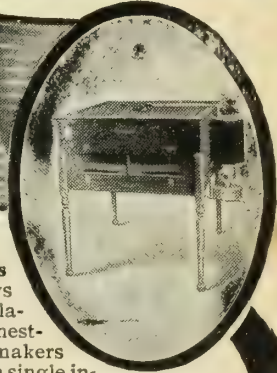

PRAIRIE STATE INCUBATOR CO.,
468 Main St., Homer City, Pa.

Model
Incubators

Model Brooders

THE incubator season of 1909 finds every essential feature retained that has made Model Incubators famous for hatching chicks that live. Model Incubators have always hatched because construction, heating and ventilating are mechanically perfect. I use selected chestnut for exteriors—the same wood used by piano makers for "building up" work. I have yet to hear of a single instance where a panel has swollen or checked, or a joint opened. The complete insulation surrounding the egg chamber, protects against sudden and fatal changes in temperature, which is accurately controlled by our compound corrugated leaf thermostat. The improvements of 1909 are:

Model Moisture Regulator, which can be attached to any Model Incubator, to supply moisture when needed and controls humidity and doing away with spraying of eggs, damp cloths, wet sand boxes, and other uncertain processes.

Model Patented Flame Extinguisher, preventing continued smoking or overheating of the burner and oil.

We have made this Flame Extinguisher a part of the regular equipment of 1909 Model incubators.

Model Patented Automatic Lamp Filler, to be attached to one or several incubators or brooders, to keep the oil fount filled to uniform height.

The strong, vigorous chickens hatched in Model Incubators can best be raised to maturity in Model Brooders, and early hatches must of necessity be raised in Brooders. The Model embodies distinctive construction. Its perfect ventilation, thorough lighting, diffusion heating system, and convenience in cleaning make it the most hygienic brooder made.

Most Important. You ought to get posted on Model Incubators and Brooders, so send today for complete catalog describing them and Charles A. Cyphers' other successful inventions.

(Facsimile reproduced in black and white of one of the colored panels)

New Poultry Book

Origin and History of All Breeds of Poultry

WITH 198 BIRDS ILLUSTRATED IN COLORS

For years the needs and demand of poultrymen have been illustration of birds in natural colors. American Poultry Journal's new book "Origin and History of All Breeds of Poultry" furnishes illustrations in colors of all recognized varieties of chickens, turkeys, ducks and geese, both male and female.

The First Time

Never before in the history of the poultry business have all recognized varieties been pictured in colors and assembled in one harmonious uniform series of illustrations, perfect in shape, color, feather markings, uniform in size and correct in comparative proportion.

Origin and History

As time goes on and older breeders drop out the origin of different varieties is lost—their history obscure. In this book has been collected all the known reliable history, relating what cross matings produce present varieties and the names of the originators.

Mating of Breeds

The secrets of mating popular breeds are described, showing how success can be obtained

in producing show winners, and the greatest possible results in egg productions.

The Book Described

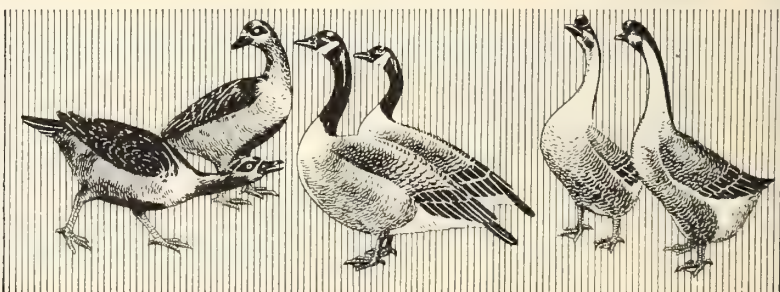

The book contains eighty pages and cover, size of page 9x12 inches. There are 198 colored illustrations of fowls, including male and female, of all recognized varieties of chickens, turkeys, ducks and geese, giving the origin and history and describing the best methods of mating to produce the desired results.

The illustrations were made by Mr. Samuel Stoltz who has proved by this work that he is the greatest all-round poultry artist in the world.

The articles are compiled from the writings of the best known, most successful breeders in the poultry business.

Introductory Price

Thousands of dollars and years of preparation have been put into this book. It is offered at the Bargain Introductory price of \$1.00 a copy, while in connection with one year's subscription to this paper it can be secured at a reduced price for the two as will be seen by the special offer below:

S. A. HUMMEL, BOX 52, FREEPORT, ILL.

MURDER

Now is the time of year when your poultry houses are alive with the mites or jiggers that prey upon your chickens at night and which drop off, full of blood sucked from the chickens' bodies in the mornings. This occurs nightly and it is plain to be seen that such sapping of the blood of your chickens weakens them, retards their growth and prevents them from laying as many eggs as they otherwise will do. **Schild's Lightning Lice Murder** is the only known remedy that will positively and completely kill these mites or jiggers and all other poultry lice, and leave them dead in piles for you to see. It is simply scattered over the poultry houses by the hand. Not a mite can possibly escape. Our Murder is very powerful and may be used successfully to disinfect all foul smelling places. **We guarantee results or money refunded.**

John S. Martin : Originator of the Regal Strain : Box 51, Port Dover, Canada

REGALS ALWAYS WIN

In the past three years I have supplied 1st prize winners at Madison Sq. Garden, N. Y., Boston, Chicago, Indianapolis, Buffalo, Hagerstown, Allentown and scores of others in addition to these are my own unparalleled winnings. Read the following from one pleased customer 12,000 miles away:

Rondebosch, Cape Town, South Africa.
John S. Martin, Port Dover, Can.

Dear Sir:—I must congratulate you on your wonderful success at Syracuse. The Regal Strain is the best no doubt. At the Western Province show, held at Rosebank, Feb. 22, 23 and 24, 1909, one of the largest here, I won with birds bred from pens I got from you, 1st and 2d cock, 1st and 2d hen, 1st and 2d ckl., 1st and 2d pullet, besides which the 1st ckl. was awarded the championship for best heavy bred ckl. in the show, and the 1st pullet the championship for the best heavy bred pullet in the show. I thought you would like to hear of these Regal winnings in a far land. Yours faithfully,

R. W. Hazell.

Do you want to be counted among the successful breeders of W. Wyandottes? You must breed the advanced type, the Regal Strain. Eggs from 14 grand exhibition matings are \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100. Free—Send for mating list describing the pens and giving photos of winners.

The Sensation for May IS OWEN FARMS' HALF PRICE SALE

Half the birds in our breeding pens are for sale after May 15, for just half their value Feb. 1st, prior to the egg season. Males and females in all varieties and in any number, now

\$2.50, \$3, \$4, \$5 to \$15 each

worth \$5, \$6, \$8, \$10 to \$30 each

These birds will be carefully mated for best results, are in perfect condition, and you can secure plenty of chicks from them this year.

June and July hatched chicks are always the best colored of the year, and properly reared they grow into winners for the January and February shows.

These birds are all line-bred from the leading winners at New York, Boston, Chicago and the other great National shows. They have the best blood lines in America and are what you want to help you reach the top.

Each year we have sold hundreds of birds for half price during June and July. This year we will give our customers the advantage of two weeks more breeding from these fine birds. Prompt early orders will give you full advantage of this offer.

REMEMBER, every bird that does not please at the price paid can be returned at our expense and money will be cheerfully refunded. Varieties are **Buff and Black Orpingtons, Barred, Buff and White Ply. Rocks and White Wyandottes.**

Send us the amount you wish to pay and secure prompt shipment after May 15th. Catalogue and mating list are free. Please mention this paper. Address

How To Test Any Roofing

FIRE

WATER

Don't pay out good money for roofing until you first test the roofing you're going to buy. This applies to Vulcanite as well as to all other roofings. We want you to test it against heat, fire, cold, acid, water and anything else you like. Bend it—twist it—try to tear it. Compare it with any other. You will know absolutely then, there is none as good as Vulcanite.

Has Stood the Tests for 60 Yrs.

HEAT

VULCANITE
STRONG DURABLE

ICE

Best by Any Test

ACID

is coated with a mineral product that does not freeze nor crack in winter, nor crumble and peel off in dry weather; it is absolutely water, wind, acid, weather and fireproof. For farm buildings and outhouses **Vulcanite Roofing** is the favorite of the farmer who figures cost by years of service and not by the first cost. Any handy man can lay Vulcanite Roofing. Caps and Cement come with every roll—so all you need is a hammer. Once on, Vulcanite stays on for good.

It will pay you to learn more about Vulcanite—the roofing with 60 years' experience in every roll. A postal will bring you a sample with which you can make the tests—also our free book which gives interesting facts about roofing. Write today. Sold by dealers. If yours can't supply you write us.

THE PHILO SYSTEM

IS ESPECIALLY VALUABLE TO THE FARMER AS WELL AS THE CITY OR VILLAGE FANCIER AND IS ADAPTED TO ALL CLIMATES, ALL THE BREEDS AND PEOPLE

The Philo System is Unlike all other Ways of Keeping Poultry

and in many respects it is just the reverse, accomplishing things in poultry work that have always been considered impossible and getting unheard of results that are hard to believe without seeing. However, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success

From selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg, and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work and any man, woman or child that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing, here, three cents per pound above the highest market price.

Our Six-Month-Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone or meat of any description is fed, and the food is inexpensive as compared with food others are using.

Our new book, THE PHILO SYSTEM OF PROGRESSIVE POULTRY KEEPING, gives full particulars regarding these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and fifteen pages of illustrations showing all branches of the work from start to finish. It also tells how to make a brooder for twenty-five cents that will automatically keep all lice off the chickens or kill any that may be on them when in the brooders.

Our New Brooder Saves Two Cents on Each Chicken
No lamp is required. No danger of chilling, overheating or burning up the chickens as with the brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically, or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of from 25 to 50 cents.

A Few Testimonials

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Keeping Poultry and was surprised at the result accomplished in a small corner of a city yard. Seeing is believing, they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

P. S.—A year's observation, and some experience of my own, confirm me in what I wrote Sept. 5, 1907. The System has been

tried so long and by so many, that there can be no doubt as to its worth and adaptability. It is especially valuable to parties having but a small place for chickens; seven feet square is plenty for a flock of seven.

(Rev.) W. W. COX,
Ransomville, N. Y., Dec. 5, 1908.

Dear Sir:—Last spring we purchased your book entitled the "Philo System," and used your heatless brooders last spring and summer. The same has been a great help to us in raising the chick in the health and mortality, the chicks being stronger and healthier than those raised in the brooders with supplied heat. We believe this brooder is the best thing out yet for raising chicks successfully. We put 25,000 chicks through your heatless brooders this last season and expect to use it more completely this coming season. We have had some of the most noted poultrymen from all over the U. S. here, also a large amount of visitors who came daily to our plant, and without any exception they pronounce our stock the finest and healthiest they have seen anywhere this year.

Respectfully yours,

W. R. CURTISS & COMPANY.

Are They Worth Saving? Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick, and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen. It takes but a minute to save a chick and no skill required.

Note What Others Say of This "Trick of the Trade"

Ringwood, Ont., Can., May 6, 1908.
Dear Sir:—Some time ago I got the Philo System and must say it is the best book I ever read on Poultry. I have tried the "Trick of the Trade" and saved twenty-two chickens which otherwise would have died.

Yours truly,

ROY MOYER.

Bethlehem, Pa., April 25, 1908.
Dear Sir:—Your book safely to hand, and have derived great benefit from it, especially "A Trick of the Trade."

Respectfully yours,

G. H. STANFORTH.

Potomac, Ill., May, 1908.

Dear Sir:—I am using your System of Progressive Poultry Keeping and consider it the best work on Poultry Raising I ever read. In my last hatch I saved twenty-three chickens by following the article, "A Trick of the Trade."

Yours truly,

FRED JANISON.

The Secret of Making Your Incubator Work Successfully is a Reliable Thermometer

If we wanted to hatch chickens and had to make a choice we would select a poor incubator with a good thermometer, rather than a good incubator with a poor thermometer. In an incubator the process of hatching is this: At a temperature of 103 degrees, an egg proceeds normally through the various stages that change it from an egg to a chick. At other temperatures, this development is retarded, or it may be wholly arrested, completely killing the germ. A proper heat properly regulated is the whole secret. Fortunately there are good incubators equipped with good thermometers.

If You Are an Incubator User

would you to save a few cents on your thermometer—perhaps the cost of an egg in a valuable setting—risk spoiling that hatch and several more? Many enthusiastic poultry lovers have gone back to "Mother Hen" just because they could not depend on their incubators to bring off even a fairly good hatch. In many of these cases the incubators were not at fault. They were simply equipped with no account thermometers.

With a reliable thermometer, such as "Tycoo" you will not cook your chicks in the shell, or allow the eggs to be so chilled they will not hatch. A "Tycoo" can give you a chicken from every hatchable egg in almost any kind of an incubator.

Write for our book of "Thermometer Facts" today and you will appreciate more fully how essential a thermometer is to your better success in raising poultry.

Let a

Help You

If You Are an Incubator Manufacturer

you have a special interest in the thermometer you send out with your machines. If you make a high grade incubator, you cannot afford to run the risk of having your machines returned under your guaranty, and customers dissatisfied just because an unreliable, inaccurate thermometer has been used. Even if you make your first sale "stick" you run the chance of missing on repeat orders which are the cheapest and most desirable business to have.

If you make a popular priced incubator you cannot afford not to have an absolutely accurate and reliable thermometer.

We want every incubator manufacturer to write us about "Tycoo" thermometer within the next thirty days—better do it today. We can show you that you will be dollars ahead at the end of the year by doing so.

Petersen's Houdans**Reign Supreme at the Nation's Greatest Shows**

My record has never been approached by any breeder. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet. **BOSTON, 1902.** Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials. **BOSTON, 1903.** 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials. **BOSTON, 1905.** We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition. **BOSTON, 1906.** Judged the Houdan Exhibit.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.

Also highest honors at Madison Square Garden, Philadelphia, Pan-American, Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. We do not exhibit at state fairs and smaller shows, nor enter into competition with our customers. Write for particulars.

WHY POULTRY PAYS AND HOW TO MAKE IT PAY

A book for the beginner in poultry raising and for those engaged in it who are interested in securing from the business the greatest profit obtainable. This book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs. Also contains a chapter on Poultry Diseases and simple remedies for same. Gives instructions on incubators and brooders and much other valuable information, and is profusely illustrated with ideal drawings of Standard fowls.

We are selling this book at the popular price of **50 cents**. This book and one year's subscription to American Poultry Journal for only **75 cents**. Send all orders to

METAL MOTHERS

OUR NEW DISCOVERIES MAKE

POULTRY KEEPING EASY AND PROFITS SURE

OUR MACHINES were used exclusively in the original Philo System plant where over **\$1500 FROM 60 HENS IN TEN MONTHS** has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our System of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

THE BROODER-HATCHER

OUR 1909 PATTERN METAL MOTHERS are the perfected results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic. One Metal Mother complete \$7.50; two, \$14; four, \$24. One Hatcher complete \$5; two, \$9; four, \$17; six, \$24. Catalogue free.

The Cycle Hatcher Co., Elmira, N. Y.

Dear Sirs:—As per your letter I will send you an order for six machines in a few weeks. Am hatching with the one I now have. Got 47 chicks from 50 eggs. Have abandoned all my 200-egg machines. Am practicing in my store with a view to starting my 40-acre poultry plant near town here. Think I can sell a lot of these machines next year.

H. W. White, 311 Ada St., Yankton, S. D.

The Cycle Hatcher Co., Elmira, N. Y.

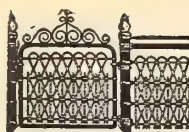

Gentlemen:—The hatcher we bought of you last May is all right. We took off two hatches with it: one of 43 chicks and one of 46 chicks. All good ones.

Yours respectfully, G. W. Simpson, Austin, Pa.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—You people may be interested to know what an experiment with one of your Metal Mothers has done for us. On the 17th of Oct. we put 40 eggs in your machine, 38 of them being fertile, and when hatching time came we were surprised to find 38 chicks from our 38 eggs. This we think an excellent record, for the machine had been placed out in the open weather, the only protection being an old tin covered box. Yours respectfully, J. P. & L. L. Hollinger, R. I. Red Farm, Witter, Pa.

1909 Rose and Single Comb Rhode I. Reds 1909

At Massillon, Ohio, won twenty prizes on fourteen entries, four color and two shape specials of R. I. Red Club and two specials from Association on rose comb, also first and color special on single comb. At Kent, Ohio, I got all on single comb and on rose comb 1st cock; 1st, 2d and 3d cockerels; 1st, 2d, 3d, 4th and 5th pullets; 1st pen; 1st and 2d hens; also silver cup special for best pen in American class. These Reds are not a prize winning strain only, but have won first for me at every place I exhibited for the last four years, and are great egg producers of which I make a specialty. Only one male in all my yards that has not won me a prize. Eggs, special yards 1 and 2, \$2.50; all other yards \$1.50 per 15 straight. Only a limited number of single comb eggs to spare.

Maple Glenn Poultry Yards, D. D. Beechy, Mgr., Sugar Creek, Ohio

ROCKS White, Buff and Barred

I am very strong in White Rocks and have won at Columbus, Ohio, State Fair 1907, on five entries, first cockerel, 1st pullet and 1st pen. At Tiffin, Ohio, won 1st cockerel, 1st and 2d pullets, 1st pen. At Findlay, Ohio, 1908, A. P. A. silver medal on best cockerel and at Bowling Green in three years I have lost one premium. I have eggs from my winner at "Live and Let Live" prices. Best pen \$2.00, two pens \$1.50 per 15. Incubator eggs \$4 per 100. I want to hear from you.

FRANK SISSONS, breeder, exhibitor and winner of firsts, cups and hundreds of prizes at the biggest shows in Europe. Amongst others within the last month: Two firsts, Birmingham, December, 1908; 1st, special and cup, Retford, 2nd Crystal Palace; 1st and special, Northallerton; V. H. C. Dairy; 1st Burton-on-Trent; 1st Newark; 1st Peterborough; 1st Chesterfield; 1st Rotherham; 1st and 2d, Belfast, Ireland. Finest flock of Buff Orpingtons in existence. Every winner bred by exhibitor. Exported to all parts of the world. Grand cockerels and pullets carefully shipped. State particulars and requirements and satisfaction is guaranteed. Money may be deposited with Editor American P. J. or with Editor "Poultry" Fleet St., London, Eng. EGGS carefully packed and results invariably satisfactory. Pen 1, 42 shillings; pen 2, 21 shillings per fifteen.

FRANK SISSONS, Worksop, Notts, Eng.

American Representative, Milton Brown, Sta. L, Cincinnati, Ohio.

ORPINGTONS WHITE BUFF BLACK

On June 1st we will sell some birds that money would not buy before we got chicks from them. Here is a chance to get into the King Row at a bound. Mr. Frank Sissons has sent us his best pen, which he declares to be the best pen of Buffs in existence. Hens weigh 12 pounds and more. We will offer some magnificent Whites, and by far the best Blacks in the world. We have 300 January hatched Whites now ready for State Fairs, at from \$3 up. 500 birds must go at once to make room. Some Buff hens at \$3 and up. Our free catalogue will interest you. We have sold many winners in the past for such shows as Madison Square, Boston, Chicago and Cleveland, and we have birds to spare now of by far the best quality we ever owned.

Brown & Coleman : Station L : Cincinnati, Ohio

THAT TIME IS MONEY

In the poultry business as in every other line is true; then why spend TIME as well as money trying to get started with anything but the best?

And Duston Saves It

for you, for as one Pennsylvania customer writes. "I have been buying from all the breeders for six years and was never able to get anything good until I bought eggs from you." It is true in hundreds of cases. This year I have better matings than ever before and my customers will get the benefit of the truly wonderful gains I have made. To prove: New York, the *Quality Show of the World*, (it's simply foolish not to admit it), where the most expert breeders meet each year, as well as the best that can be bought in all parts of the land. I won first, fourth and fifth cockerels; first and third pullets; second hen; second pen and fifth cock. First cockerel considered the finest male ever exhibited at the Garden, and second pen was set back from first only on account of undeveloped condition of cock's tail. Won shape special on male and color special on male, with A. P. A. diploma for best White Wyandotte male, yes!

First Display

for the second time in three years! These birds not bought but selected from my pens right here. Don't that tell who's breeding the best in

WHITE WYANDOTTES

Then why hesitate! Eggs from best matings, \$5.00 a set; two sets, \$8.00; three sets, \$10.00; five sets, \$15.00, and \$20.00 in hundred lots. Send 10c for catalogue to the breeder that has made possible the "world's best flocks."

Arthur G. Duston, Box 1020, South Framingham, Mass.

Bred in Line for Seventeen Years

Can any other White Rock breeder say as much? Then when buying eggs for hatching, why not place your order where you know you will secure quality and blood lines no other breeder can offer you?

U. R. Fishel's White Plymouth Rocks

are conceded everywhere to be the most beautiful and profitable of all fowls. As prize winners there are none to compare with them, while as egg producers—well, the other fellow that gets his birds to lay three eggs a day has us beat. We are offering

Eggs For Hatching

this season that have more quality than ever before. Our matings are the best we ever owned, but our prices are the same: \$8 per 15, \$15 per 30 and \$25 per 60. Sale stock eggs, \$10 per 100.

Send two dimes for 56-page catalogue, the most instructive poultry catalogue ever issued.

U. R. FISHEL : BOX A : HOPE, INDIANA

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREED

I have won more prizes at Madison Square Garden, New York, in the last ten years than all others combined. My winnings at Madison Square Garden this year as follows:

First, Second, Third and Fourth Cock
First, Second, Third and Fourth Hen
First, Second, Third and Fifth Cockerel
First, Second, Third and Fourth Pullet
First Pen

The President's Silver Cup and every special offered.

You cannot win without my strain. Every bird that won at Madison Square this year was directly from my yards, or from my strain, except one pen. They have been the leading winners for thirty years in America's greatest shows from the Atlantic to the Pacific Coast. It is the most prolific laying strain on earth and has been in hundreds of laying contests over the whole world and has not yet been defeated. Mating lists free. Stock and eggs for sale at all times. Address

THE GOLDEN PHEASANT

**A Marvel of Wonder and Beauty—A Native of China—Snow and Zero
Weather Never Troubles Them—Do well in Confinement—Care
and Management—How to Feed the Young so as to
Bring Them to a Strong, Healthy Maturity**

Written for American Poultry Journal by Rev. C. E. Petersen, West Pembroke, Me.

On a state occasion Cræsus, king of Lydia, was seated on his throne, adorned with royal magnificence, and all the blazing pomp of Eastern splendor, and looking at Solon, the great philosopher, asked him whether he had ever before beheld so much finery.

The Greek philosopher replied, he had seen the beautiful plumage of the pheasant, and had found nothing superior.

And the verdict of all lovers of bird-life has been the same since this bird was first introduced into Europe, for of a race of most beautiful varieties it is the most gaudy and for its gay and splendid plumage cannot be excelled.

The bird is a native of China, where it is called Kinki or Kinkee, Gold Flower-fowl, or Wrought Fowl.

It has been long known as a fancier's bird and as far back as 1766 was described by Linneus under the name of "Phasianus pictus," but pictures of this bird done in water-color by Chinese artists was for a long time supposed to be simply some of the bizarre creations of the imagination so common in this country of peculiar things.

Of its habits in its native country little or nothing had been ascertained, even its exact locality was unknown and statements on it more than doubtful until recent explorations in China that have located the Golden Pheasant and it is now known to inhabit the mountains of the western central districts, and it has been captured by Europeans on the banks of the Yang-Tsze, one hundred miles north of Hankow. According to Pere David, it is quite unknown in the north of China.

As to their marvelous plumage I never tire of looking at it, and I have often wondered why not more poultry fanciers bred this most beautiful bird that always seems to me the crowning glory of bird creation, not only in its gaudy coloring but in the way it displays its plumage to the females over which he reigns supreme, and where a dozen male birds are kept together in one yard it is nearly impossible to describe the flashing of their various golden, crimson, blue and purple plumes which in the different lights of the sun are absolutely dazzling to the eye, and at such times they contrive to display all the most beautiful parts of their plumage to the utmost advantage, the golden crest is raised, the splendid orange and purple collar is spread out to its full extent, while the scarlet tail coverts are shown in all their beauty. During the whole time the birds are leaping and dancing around each other, one of the most brilliant sights to be observed in all nature.

The male in its mature plumage has its head ornamented with a long crest of silky orange-colored feathers. This extends backwards over a tippet formed of broad flat feathers, which are of a deep orange color, with dark blue bars across the tips, these later form, when the feathers are in position, a series of horizontal lines across the tippet.

During the courtship of the female this collar or tippet is brought over to the side nearest the hen, but if she flees his admiration and gets on the other side of him, quick as a lightning flash the collar is turned to the other side

to again meet her gaze, and I have seen females perfectly enraptured and dazzled with the display, and giving utterance to a plaintive soft tone of appreciation.

One of the greatest observers of the courtship of birds and among them the Golden Pheasant, is the naturalist, T. W. Wood, the English John Burroughs, who writes on the courtship of the Golden Pheasant as follows.

"Not the least remarkable example of the lateral mode of display during courtship is that of the Golden Pheasant, whose elegant form and brilliant colorings are so well known in this country. The male runs very playfully after the female, and placing himself in front of her, quickly expands his collar, bringing nearly the whole of it around to the side where it is to be exhibited, and thereby presenting to view a flat disc of bright orange-red, banded with perfect regularity by blue-black semi-circles; the hen, on seeing this, frequently runs away pursued by her would-be mate, who generally finds himself placed with his other side toward her, and the collar is accordingly shown on that side.

"At the moment the full expansion of the collar takes place, the bird utters a very snake-like hiss, which according to our notions would not be a very fascinating love song, the body is very much distorted, and slight breaks would occur in the black stripes of the collar when expanded, were it not that each feather has a second black stripe which is so placed as effectually to prevent this."

Below the tippet on the lower part of the neck the feathers are a deep green margined with velvet black stripes, below this again comes the scapular feathers of a dark crimson, the back and rump are a golden yellow, the tail itself is very long, the two longest central feathers measure from twenty-four to thirty and more inches in a well-grown specimen, and are covered with small irregular circles of light brown on a dark ground, giving them a mottled appearance, the other feathers are barred diagonally with dark brown on a lighter ground.

On each side of the base of the tail extend the long narrow upper tail coverts of a bright orange crimson. The wings when closed show the deep blue tertiaries covering the chestnut colored secondary quills.

The upper part of the throat is light brown, the breast and under parts scarlet.

The male does not get into full plumage until his second season and this is one of the most marvelous transformations in its life that we have watched again and again with the keenest interest.

When the young birds emerge from the eggs they are somewhat smaller than a Bantam chick and of a rufous-red color striped down the back with a narrow line of black.

Both male and female are alike and no difference in the plumage for the first few weeks except in the eye, which is a milky-white in the male and hazel-brown in the female, and these are among the first visible signs that distinguishes the male from the female.

As the birds grow older the males show deeper coloring of the head and back, being almost red on the head and the back shows bright orange-red in the brown but this is all the noticeable difference.

During the winter where good food and care is given the male will begin to show here and there that he is most truly a prince in disguise, for here is a small patch of green, here a little yellow and his antics are beginning to be the same as his full-plumaged sire.

Early in the spring the brown plumage begins to show greater changes, the green and blue becomes quite noticeable on the back, the crest begins to throw out a feather

or two or more, the red streamers on each side of the tail begins to show and the bright orange of the collar becomes very noticeable and by mid-summer he generally attains his full plumage and stands forth to conquer in all his wealth of splendid adornment, and I may say here, that if the

Young stock on the Rock Hill Poultry Farm, Ossining, N. Y., hatched February 12, 1909, picture taken April 1, 1909.

young male is kept together with the females it will hasten the putting on of the adult plumage.

The hens are very plain and in their brown plumage, with the barring of alternate shades, and the lighter breast color, for all their unobtrusiveness always looks neat and trim and with their splendid hazel-brown bright eyes and yellow legs are to us very pretty, seemingly taken for granted that one in gaudy colors is enough for one family.

Sometimes when hens grow old and barren they will assume the more gorgeous apparel of the male bird and on examination of such a bird after it had been killed it was found that the ovaries were shriveled up and atrophied.

S. C. RED COCK RED RAVEN 4TH.

A typical shape male with the genuine rich red color so much desired, a tested breeder of "Superior Show Quality." Bred and owned by C. W. Zimmer, Red Specialist, Ft. Wayne, Ind.

The breeding season for the Golden Pheasant opens in the early spring and as a general thing they will begin to lay in March or April and will lay from twenty-five to thirty-five eggs in a season, the first mentioned number being the most common.

The egg is a slightly tinted egg about the size of a

Bantam egg, the tint being of a very lightish buff, and will be dropped anywhere in the yard if no shelter is provided, but where some bushes are found and brush put in the corners they will invariably go there and deposit their eggs, which should be gathered as soon as they are laid and an imitation egg substituted in fact it is well to drop several of these in the breeding yard in the out-of-the-way places.

There is a common idea of this bird that it is an inveterate egg-eater, but I have not found it to be so, any common fowl would easily be turned into an egg-eater if her eggs were left exposed to be played with and thrown around by the birds and under such circumstances one or more are easily broken and the habit incurred and all the fault of the breeder who should have been more careful in gathering the eggs.

They are, however, notorious bad sitters and mothers in captivity, and some small hen, the Cochín Bantam or Silky hen is preferable, should be used to incubate the eggs and rear the brood.

I have given the Pheasant hen a chance to incubate her own eggs and found that as soon as the eggs began to pip

A BLUE RIBBON "ARISTOCRAT."

S. C. R. I. Red pullet. Note her shape, broad, deep and long. Weight, 6½ pounds. Even, deep but soft red, under-color nearly as red as outside. Bred and owned by Ira M. Crowther, Box A, Willoughby, O.

she would be uneasy and as soon as a couple of them were hatched she would leave the nest.

One morning we found such a hen covering on the ground and going to see what was the trouble she flew into our face and exposed two little tiny chicks with which she had left the nest containing a number of eggs that were pipped and which would have hatched if she had stayed on the nest, which by the way was an excavation in the ground hatched out by herself.

A small Bantam Cochín hen can easily cover thirteen eggs and it is almost certain that every egg is fertile and that every one will hatch out a bright, smart young pheasant.

They are very active when hatched, much more so than chickens and care should be taken to put a wire screen in front of the nest the day before hatching or they may leave the nest before all eggs are hatched, and disturb the mother hen, making her unruly, and sometimes hide within a few feet from the nest so it is almost impossible to see them, and of course if remaining there, get chilled.

The period of incubation is somewhat longer than the period taken by the common fowl being what we should call twenty-three days to complete the hatch.

The eggs will begin to pip on the twenty-second day and on the twenty-third day we have always removed the young

pheasants from the nest. And thirteen eggs in our experience has meant thirteen young birds and except through carelessness all would thrive and grow into strong adult birds.

In mating the birds I take a cock in full plumage and mate him to from five to six females, about the right number, so as to secure all eggs being fertile, and as the eggs are expensive it is important to secure strong fertility.

I would not use a male bird to breed from which is not in full plumage, as we believe it is always best to follow nature's mode of procedure and it is certain that if the male was supposed to be used for breeding the first season of his life the so necessary sexual adornment would have been supplied.

A young unplumaged bird can be bred from the first season, but in a state of nature his chances would be very small in securing females as he would have no attractions to display before the female.

And stock thus secured from immature birds would invariably be of less strength and hardiness and less size.

R-C-R-1-RED PULLET FROM FIRST PRIZE PEN AT
KANSAS CITY & CLEVELAND SHOWS 1909
Bred & Owned By
RIDGE VIEW FARM WILLOUGHBY O.

The Golden Pheasant male is the size of a large pigeon in body, but with his long tail looks still larger.

The female is the size of a pigeon and when well grown will be still larger in size. In the case of Pheasant-rearing, as with chickens, size much depends on the time which they are hatched, and birds hatched in May are much better and much stronger birds than those hatched later in the season, say in July.

The hen does not shake off the pheasants as she had to do with common chickens, they shake her off, for when they get to be from five to six weeks old they will be found roosting on a bush or on the top of the coop, bright-eyed, alert, and a very picture of strong robust health.

They are very hardy and will stand all sorts of weather, that is the adult bird, and they become fully grown in five months' time.

They will not go under cover in a rainstorm; will roost in their tree or bush or on some perches placed for them on the outside, and I have never seen them worse for the drenching; in fact, it seems impossible to wet them through.

When I first began to breed them it made me uncomfort-

able to think of the birds outside in the wet, roosting on a branch of a small tree in the aviary, but after an all-night rain storm I would come out in the morning and find the drops of rain rolling from them like pearls, prim and neat

Fifth prize White Wyandotte hen at Detroit, 1909. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

as ever, and it would seem that they had not been out in the rain at all.

In the winter they will, if they can get out, bask in the new-fallen snow and zero weather never troubles them, but they, like all birds, love a sunny place in which to dust, and it would be sheer cruelty not to provide for them nice sunny quarters.

It would not hurt them to roost in the open if they themselves could secure their shelter on the south side of some large branch, but where kept in confinement shelter should be provided for them.

WHITE PLYMOUTH ROCK.

First cockerel, Detroit State Show, 1909. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

An open front house, so-called, but in this case wired in front with one-inch netting, will answer every purpose, and if glass is provided there should be a long curtain front over the top of the window exposed to the sunny south,

free from drafts, but pure and wholesome air is welcome to them as the very breath from heaven.

I have one pen in which I winter about twenty Golden Pheasants made in the end of an old shed and with windows exposed to the south.

In the fall I cut a large spruce tree and put it inside this pen, which is about 10x30, and it has kept green up till date, and the birds have roosted in it all winter, and up on the rafters overhead and a brighter and healthier lot of birds I have never seen.

This is, however, larger than necessary, but goes to show that fine quarters can be made out of almost every kind of a house for what will accommodate a flock of chickens will accommodate a flock of pheasants.

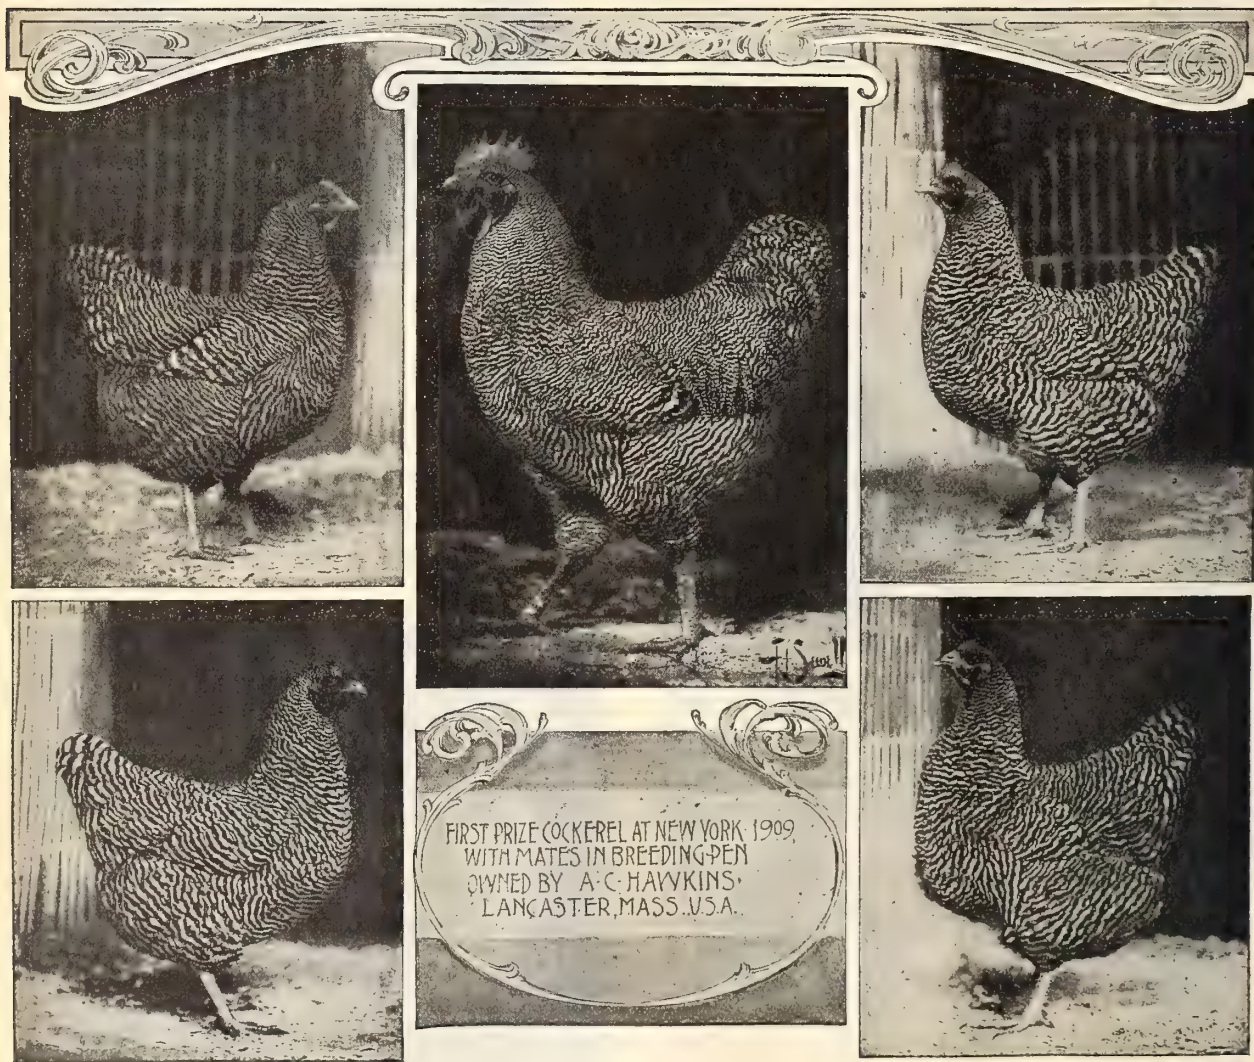

A house 8x10 is plenty big enough for a pen of birds and this should be fronted with a yard where there is shade, some grass, and bushes if it is handy, and the size of the

any person with their breeding, but it is simply not necessary and I might say that they will almost care for themselves if given a chance, anyhow they will from the time they shake off the hen.

When the chickens are about ready to hatch I make a custard same as I would make it for my own table, but without the sugar, and for the first few days I give them this sparingly and they love this fare and delight in getting it.

After three or four days I sprinkle a little fine chick grain in the coop and they will pick that up when they want it. I keep water before them in a small shallow dish from the beginning and I have never lost a chick from feeding improperly, and this procedure is about all there is to it.

Some time during the late spring or early summer I have dug up an ant hill and given them the eggs found in the dirt and it is amusing to see them get busy for the eggs,

"Royal Blue," first prize and sweepstakes special Barred Plymouth Rock cockerel at Madison Square Garden, New York, 1909, with mates in breeding pen. Bred and owned by A. C. Hawkins, Lancaster, Mass.

run we like to have just 15x30 feet for each breeding yard.

This run should be covered with wire netting overhead for the birds are flyers and cannot be kept inside a wired run except it is wired overhead as well.

Where it is not possible to get grass, bushes and a small tree or two inside the run any old brush will provide shelter, but where the above described features are inside the yard it becomes an immense attraction to the eye as far as looks are concerned and nothing will show the birds to better advantage.

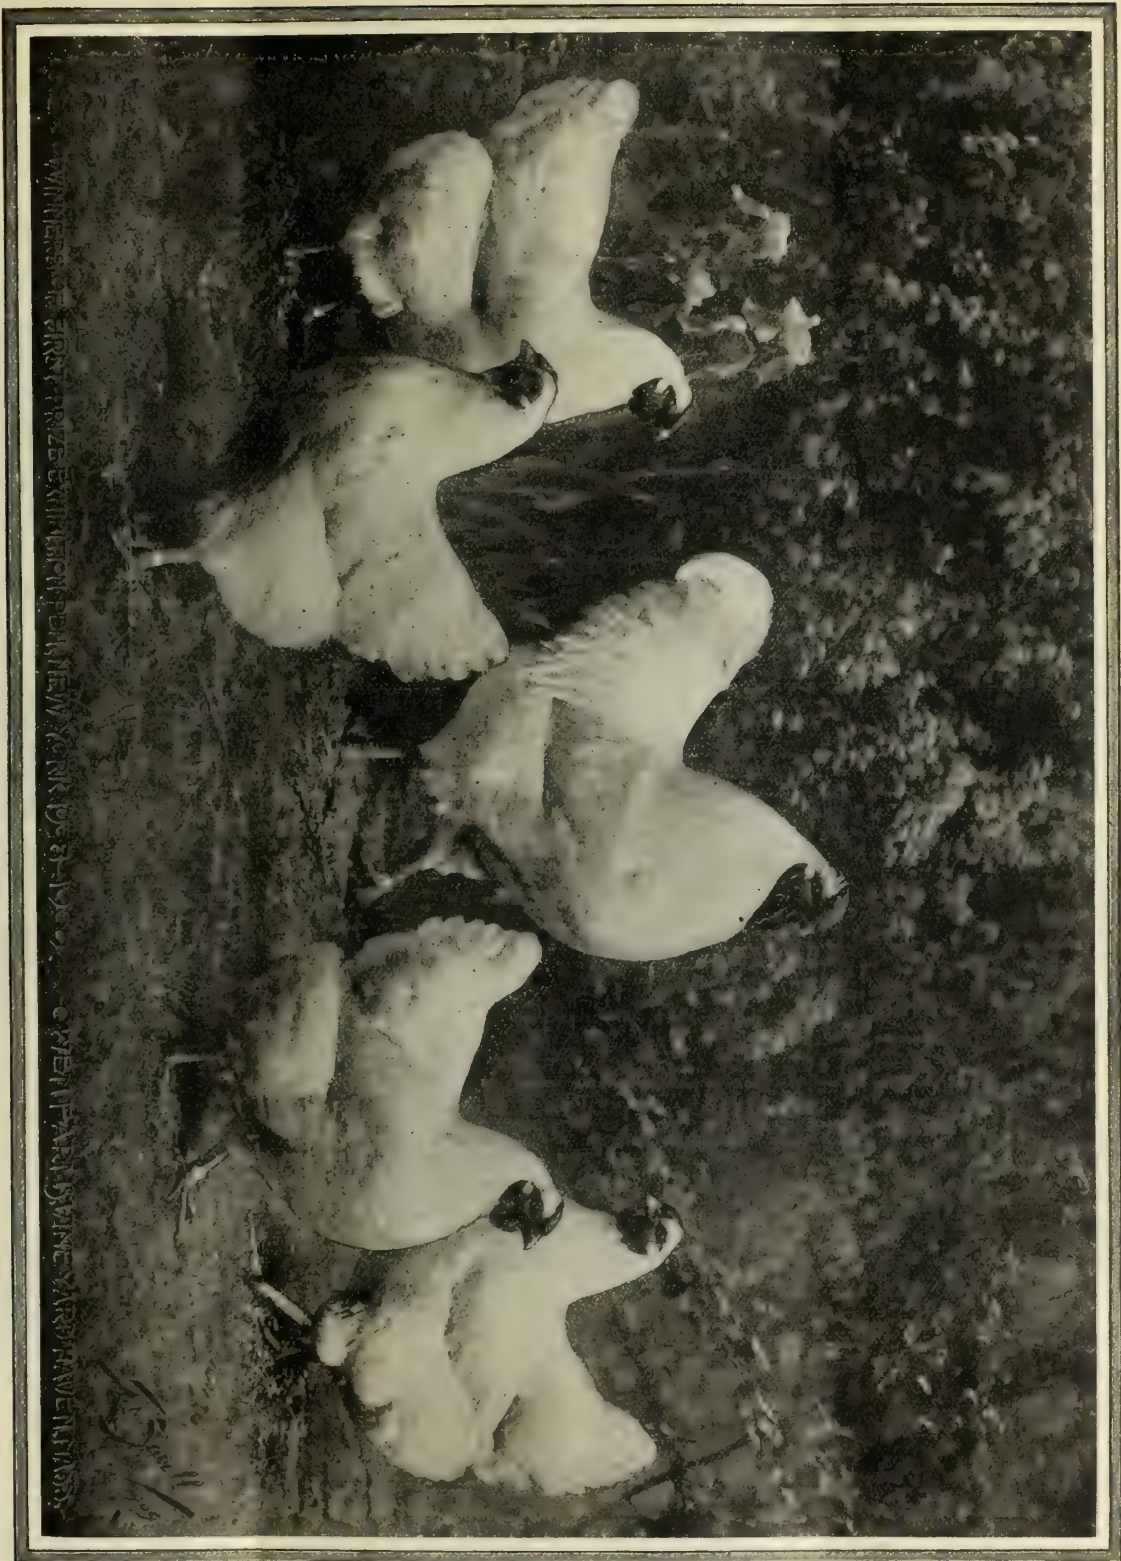

But even a smaller yard and a smaller house will answer, for I have known of people raising them to perfection in a small back yard, using a piano box for a house.

As to the care and management of the Golden Pheasant much nonsense has been written from the spiced food business to the nasty fly-maggot business which would discourage

but this is not at all necessary. Good, clean and sweet beef scraps will provide them with all the animal food necessary and grow them into fine, large, strong birds.

It is of course unnecessary to say that like little chickens they should be kept from getting wet when very young. They should not be allowed to run out in the wet morning grass when only a few days old, but should be kept inside of their coop in wet weather. After they get to be old enough to shift for themselves, less care in this respect is necessary.

And now in conclusion let me say that if you want to add to the pleasures of your surroundings get a few Golden Pheasants. There is absolutely nothing that can equal them for beauty of plumage and their enchanting ways of showing it to the female. They will keep the children from play and old men from the chimney corner, and attract as much genuine admiration as a whole poultry show.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to R. Houghland, Boonville, Ind., and the second prize to Mrs. Edwin S. Baker, Elmira, N. Y.

DEVELOP THE INDUSTRY.

The great American hen is strutting to the front.

The flush of the egg season is now at high tide.

The price continues to soar, soar higher than ever before at this season of the year; the next highest being in 1904,

New York city he will be pleased to have offered to him large white clean eggs which at all times sell at a premium, while if he ships to Boston he will prefer to buy large brown eggs, which are in best demand. With the highest prices for live poultry this spring we have ever enjoyed and with eggs going in cold storage this month at the highest price in history of the storage business it is only reasonable to expect and predict some high prices this summer for broilers and next fall and winter for fresh eggs.

These large dealers and speculators who store their eggs will hold reasonable length of time for the market to advance to pay their storage charges, insurance and interest on money invested and profit for risk they themselves have taken.

With all these favorable conditions it will certainly be a profitable investment to have comfortable quarters and a large number of early pullets to lay this fall and winter when with some blizzard weather we will most likely enjoy the benefits of extremely high prices for fresh eggs; while with some continued warm unseasonable weather next November and December will likely hear of some losses for the dealers who stored eggs.

It may be interesting at this time and in this connection to call attention to the importance of the poultry industry of the country, in its money producing value, in comparison with our standard farm crops, which we all prize for their great source of wealth, influence in the commercial trade and traffic of the world.

Three A. P. A. medal winners at the great Columbus, Ohio, show. White Wyandotte cockerel won first in his class and the A. P. A. Gold Medal for best cockerel in the show, 1,500 birds competing. Silver Wyandotte won the Silver Medal for best cockerel of the breed and first in his class. Golden Wyandotte won Silver Medal for best cockerel of the breed and first in his class. Owned and bred by Ira C. Keller, Prospect, Ohio.

when the price was 2½¢ per dozen lower than at the present time.

April is the month when eggs are at their best; they are all fresh, sweet and full bodied. It is the month when speculators and large dealers buy freely and place in cold storage in New York, Philadelphia, Boston, Jersey City and the largest cities of New England states for the fall and winter demand when fresh eggs are scarce. The speculators are getting more particular every spring. Most of them demand guarantee of net weight of a case holding thirty dozen to be forty-five pounds; and the more they weigh the better are they pleased and so the Western buyer who will carefully assort his eggs, packing large, clean eggs in nice, clean white wood cases, well seasoned lumber, will quickly learn his selected eggs are in demand. It is necessary to place the small and dirty eggs in separate cases, which can be sold to retail trade bakers and hotels.

The Western buyer will be more delighted each year to see his customers come with large clean eggs. If he ships to

The value of the poultry products of the United States in 1907, poultry and eggs produced on the farms, was more than \$600,000,000. The value of both winter and spring wheat produced for the same year was \$554,437,000. The farm value of oats for the same year was \$334,568,000; barley, \$102,200,000; rye, \$23,068,000; buckwheat, \$9,975,000, and potatoes, \$183,000,000. The combined value of these five crops for 1907—oats, barley, rye, buckwheat and potatoes—is about equal to that of poultry products for the same period.

The hay crop exceeds in value that of poultry about \$150,000,000. Corn for same period is more than double that of poultry.

The farm value of horses is more than three times that of poultry. The farm value of cattle is about two and a half times greater than poultry. But in hogs the farm value of the poultry nearly doubles it. Thus it is clearly seen that while the poultry industry is regarded by many as a small business—a kind of side issue in farming—that it is in fact

one of the leading industries and capable of great money-making power where taken up properly and intelligently handled.

Boonville, Ind.

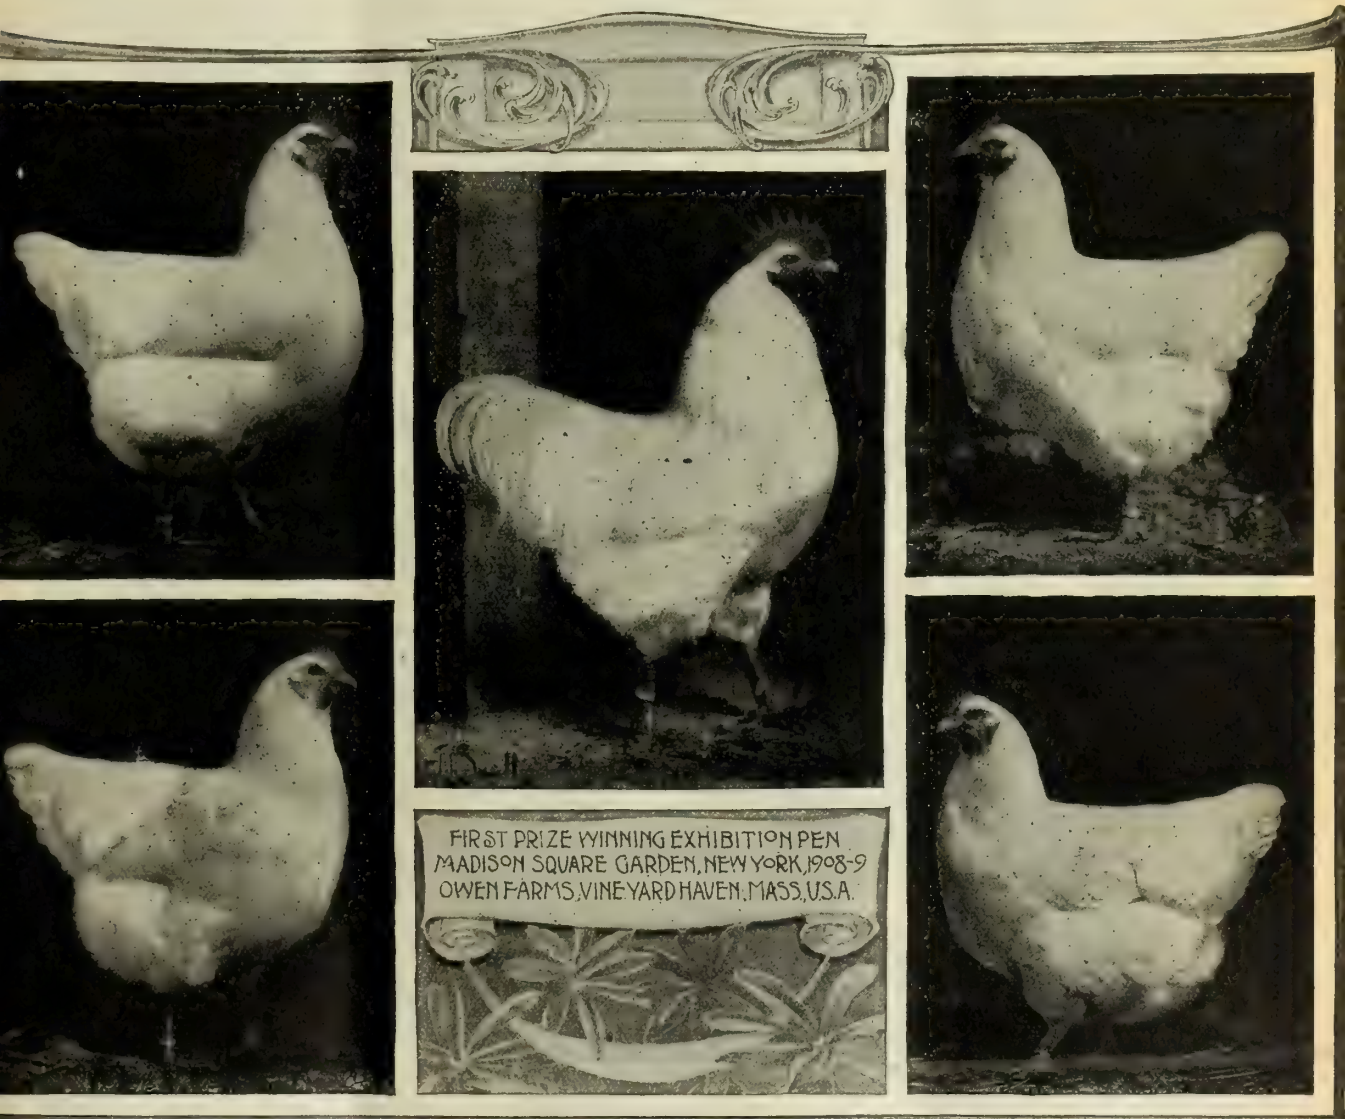

R. Houghland.

THE EVOLUTION OF A POULTRY FARM.

For some time prior to the spring of 1905 we had been longing for a country home. So far it had been a matter of day dreams, but when the opportunity really came for us to buy a suburban chicken farm, we were not long in deciding to make the venture. So May 1, 1905, found us located on our ten-acre farm, within easy distance of the trolley, which conveyed my husband to his business in the city every morning in fifteen minutes. The buildings we found consisted of a modern eight-room house and a good barn, while for the chickens was a long laying house, breed-

incubator. We decided to buy eggs instead of stock and so invested in 200 eggs from the best White Leghorn breeder we knew about. We also bought a few sittings from another breeder of note, which gave us two distant strains and provided us with fine foundation stock. At the same time we raised as many market chickens as we could from our original stock and worked up a good private trade in eggs and broilers. We now owned a horse and a cow, our land had been much improved, and was worked on shares by a neighbor, raising early potatoes and sweet corn for the local market. In 1907 the same line was followed except that no chickens were hatched from any but the best stock. Also a good many eggs for hatching were sold.

The summer of 1908 was a hard one on the farm as all crops were a failure from the drought. However, the chickens did well and we rounded up in the fall with 400 as nice pullets as one would wish to see. During the winter

ing house and a brooder house, in all equipment for the accommodation of about 1,000 fowls. Having very little capital and no experience we realized we must move slowly.

As it was then late in the season, we concluded not to go to any expense for stock that year, but to try a few experiments with our new-found treasures. There were 100 White Leghorn hens on the place and two large incubators, and July 15 we found ourselves, I must confess, somewhat to our astonishment, the happy (?) owners of 600 little chicks. Then we learned our first important lesson; that it is much easier to hatch the chicks than it is to brood them, without the proper facilities. There was a good deal doing for some time after that hatch, but in spite of all, we succeeded in raising a goodly number.

Early in the spring of 1906 we were ready for business with some new brooders for our brooder house, and another

high prices for eggs prevailed, also feed bills grew larger and larger so there was close culling in one flock and they were made to pay a reasonable profit.

The spring of 1909 finds us with 250 birds, every one a fine specimen and giving us a remarkable egg yield.

We do not wish to convey the idea that it has always been smooth sailing with us, and it should be understood that while we have attained a modest success, we have encountered the usual pitfalls. We have tried to profit by our experience and have had no desire to branch out in a large way until our stock was as good as the best. We have a genuine love for the work and feel that if our progress has been slow, it has at least been sure, and are starting the season of 1909 with better prospects of success than ever before.

Mrs. Edwin S. Becker.

Elmira, N. Y.

GAPES—CAUSE, PREVENTION AND TREATMENT

Written for A. P. J. by Karl T. Brown, M. D., Crawfordsville, Ind.

At this season of the year when thousands of chicks are being hatched, many poultry raisers are asking themselves the question how many will I lose this year from gapes, and what can I do to prevent this anticipated loss?

It is for the benefit of these questioners that what I am about to say is written and with a view of aiding those who have been so unfortunate in the past, for it is certainly a misfortune to hatch out a brood and then see them all die of gapes, which with proper precaution can be prevented.

increase in the amount of stock affected each spring.

Gapes is caused by a germ, a worm if you please, which finds its way into the windpipe, where it attaches its head to the mucous membrane of the trachea, there to sap the blood and life of the chick away.

The worm known as *Syngamus Trachealis* is a forked like worm with a head on each fork, as is disclosed upon close examination, and is found to be a female and male worm permanently attached, as you will observe on close examination, or under the microscope the main fork is about one-half inch long, this being the female, the shorter branch being about one-fourth inch long, which is the male worm.

Most chicks die as a result of loss of blood, which is sucked out by the worm, but we sometimes find death is

Private office on E. B. Thompson's Ringlet Barred Plymouth Rock farm, Amenia, N. Y., where Mr. Thompson's immense correspondence is attended to.

We have known of poultry plants to give up in despair just because gapes made its appearance year after year and prevented the maturing of chicks.

Had the poultryman in charge made a diligent investigation and a persistent sanitary campaign he could have rid the plant of the infection after a while, but instead of this he became discouraged because each spring there was more gapes and he could not understand why there was an increase of the gapes last year.

We have learned from experience that once gapes makes its appearance in the poultry yard that if precautions are not taken to eliminate the germ we will have a surprising

increase in the amount of stock affected each spring.

We seldom find a grown bird affected, as gapes is a disease of childhood, as we would say of diseases known to children in our practice.

We find it among chicks from one to eight weeks old and seldom affecting a chick after the eighth week.

The worm comes from an egg which the female does not lay. The female after having developed several thousand eggs throws them off through the body, rupturing these eggs, then hatch out either in the windpipe of the chicken

NEW BREEDING HOUSES AND

or the parent worm may be coughed up with the eggs and find lodgment in food or water and thus become a source of infection.

It has been said that the garden worm was the cause of gapes, but I cannot agree with this theory as yet any more than that the garden worm may contain the embryo, having gained it from an infected ground and thus the chick eating the garden worm containing the embryo may become infected. One forked worm can infect an entire flock in a

First prize White Plymouth Rock pullet at Detroit, 1909. Not cut for plumage color. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

short time and thereby cause the ground to become infected for years if not properly handled. It has been said that "An ounce of prevention is worth a pound of cure."

Certainly there is no place where the above will apply with more force than in regard to the prevention of gapes.

Especially should preventive measures be employed where once the gapes have been in the yards.

As I said in the beginning, where gapes have once been in the yard and no endeavor made to stop it the epidemic becomes greater each year.

I remember one poultryman who had paid \$10 per setting for eggs came to me and said his chicks were all dying with gapes and he did not know what to do and that he had three more broods due to hatch and he expected to lose them all. He demanded I advise him. He had been bothered with gapes the year before, he told me. After being satisfied the source of infection was from an infected ground I advised him to place all chicks in yards fifteen feet square, fifty chicks in each yard, and to place one peck of salt to one-half bushel air-slaked lime, and sprinkle over the ground in the 15-foot yard just before a rain and then to use the lime alone once a week thereafter.

For the broods about to come off I said to put them in a brooder house thoroughly disinfected with zenoleum. Do not let them touch the ground until eight weeks old and then only ground that had been treated with salt and lime.

The result was he raised every one of the new brood and the disease was checked among the others and the ground so purified that he has had no gapes on the place since.

It is well as soon as an affected chick is found to place it to itself and disinfect the quarters with zenoleum.

Then the worm can be removed with a gape worm extractor which can be bought from your dealer, or you can make one with a No. 30 wire that answers the purpose, making a twist and a loop. Insert the loop into Lee's Germazone, which acts as a lubricant and at the same time catches extra worms that may be dislodged. A horse hair, as you know, will answer the purpose, but is very hard to use.

A medicine known as Gap-No-More, which you can obtain from dealers in poultry supplies, is very good, and is given by placing in a tight box with the chicks and they inhale it and the worm is killed.

A remedy I have of my own, though cheap and simple, gives results.

Take sulphuric acid one-half ounce, salicylate soda twelve drams, copperas eight ounces, water one gallon. Mix and allow no other drink and you get results.

RIVERVIEW POULTRY YARDS

The Home of A. C. Hawkins and His Famous Royal Blue Barred Rocks—Mr. Hawkins One of the Early Breeders of This Variety—A Loyal Fancier, a Persistent Advertiser and Successful Breeder—His Other Varieties and What We Saw at His Home.

Royal Blue Barred Plymouth Rocks are one of the earliest strains of the specialty breeder. They have a New York show record from 1883 to 1909, a period of twenty-six years, during which time they have made a record that has brought to Mr. Hawkins a great deal more than mere chicken fame, but fortune as well.

Some over thirty years ago Mr. Hawkins began breeding Barred Rocks and for four years, it is safe to say, spent seven-eighths of his time with his poultry. These were his years of schooling as well as of labor. In 1883 he made his first entry for the New York show, believing he had mastered the breeding question by producing a line of birds the equal of any other. The result of his judgment is pretty well known, for when the ribbons were placed all the blues and nearly all others went up on his birds. It was a clean sweep, as we say nowadays, and was well won. From that to this day, the Royal Blues have been heralded over the world in a conspicuous and masterly manner. This was but the beginning; year after year they came back, winning their share and increasing their hold on the fancy. And even now at this late date, just as if more records are necessary, we find Mr. Hawkins at the Madison Square Garden Show with four cockerels entered and winning first prize and color special. The 1909 New York Show was a record breaker for quality, and in particular is this true in regard to Barred Plymouth Rocks. The cockerel class contained sixty-six birds, thirty-two of which were marked up with best merit, and from these the eight winners were selected. This will, partially at least, give the reader an idea of the uniform high quality of this class, and for them to try to imagine the superb quality required to win out over

S. C. WHITE ORPINGTON.

One of the first prize cockerels in the yards of Wm. Cook & Sons, Scotch Plains, N. J.

thirty-two of the very best grade of birds we have seen. Mr. Hawkins sold one of the cockerels shown for \$100, and refused that and better for the others. They, with the N. Y. winner, now head his breeding yards.

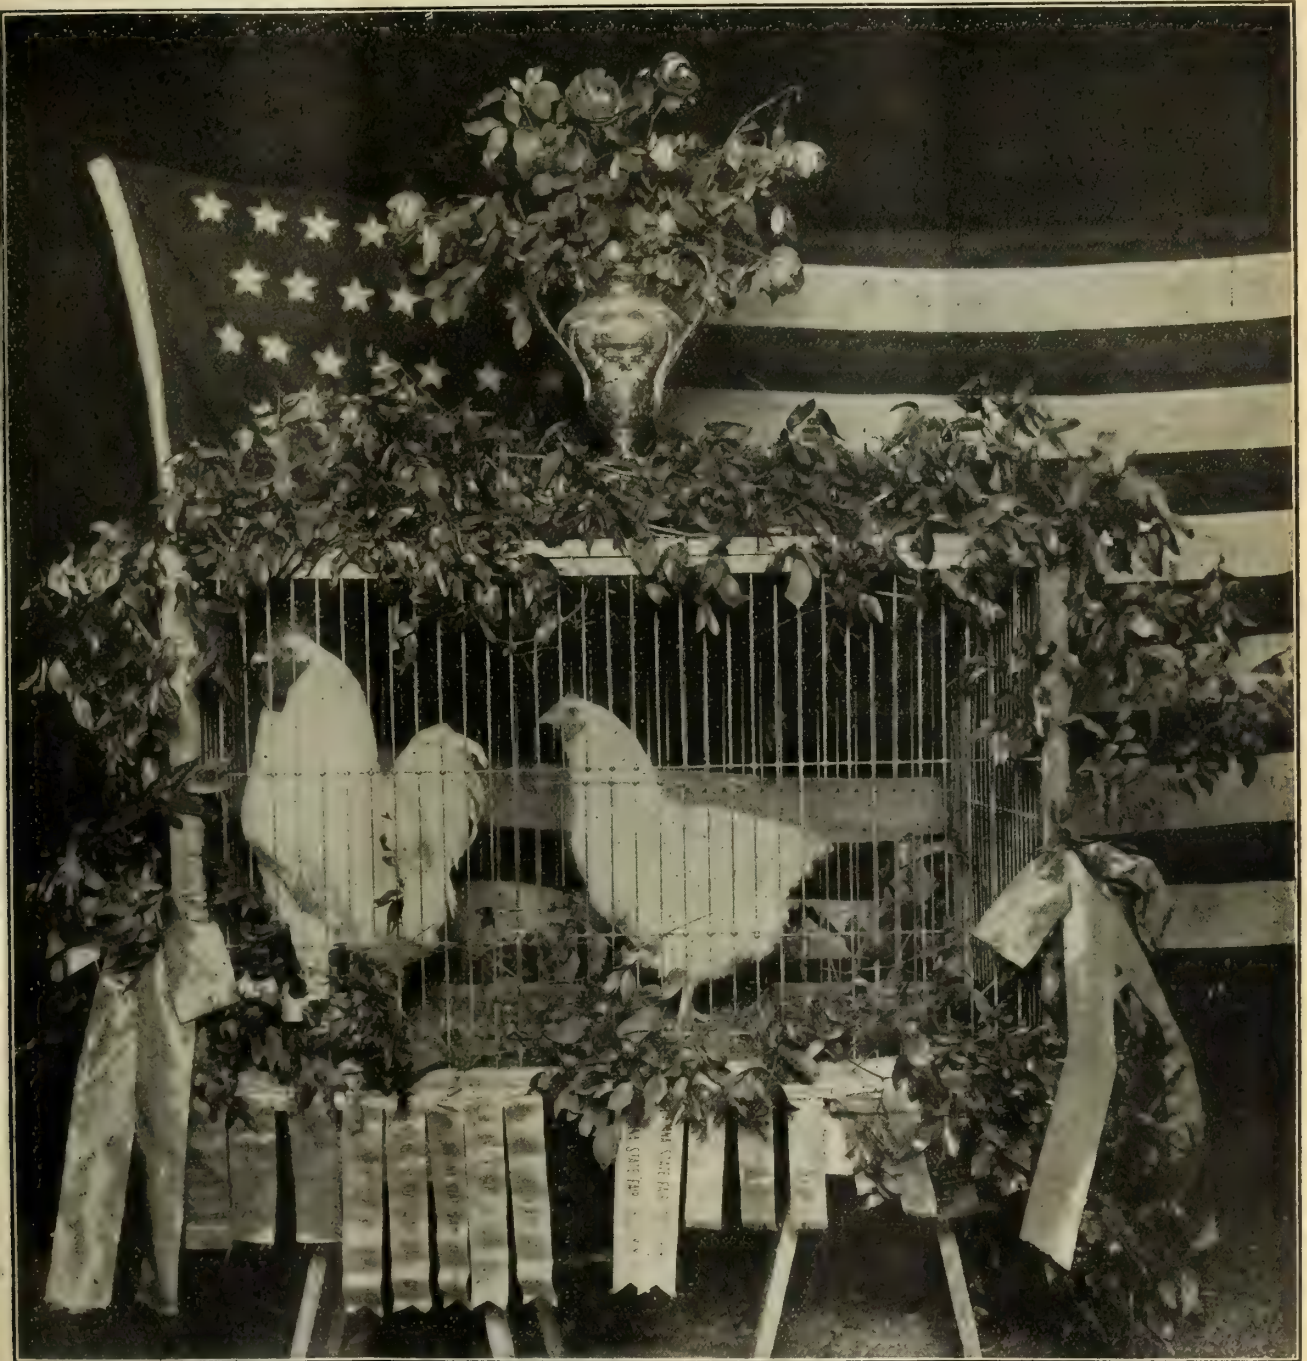

Standing in Mr. Hawkins' door yard one can get a beautiful view of the surrounding country. To the right is the

homestead where Mr. Hawkins' father still lives at 86 years. This has been the family home for over 200 years; it was built when the Red Men roamed freely in that section, and looks good to house several future generations. The clapboards are hand grooved, and the nails used were hand-made. From here also one can get an idea of the size of this plant. Facing the south are four long rows of houses, each with roomy pens and long run-ways set to fruit. Just below these houses are the colony houses, each with a half

to note his admiring glances, even after a lifetime spent here. There is a something in nature that is just as irresistible as the hen-fever. The true fancier loves nature; he is working with it, trying to solve the problems and he can see so much more in it to admire. Mr. Hawkins has well named his place Riverview.

Royal Blue Barred Rocks.

The first house we entered was the cockerel house. Here

A pair of prize-winning White Plymouth Rocks, owned by P. B. Condit, Indianapolis, Ind. Valued at \$2,000. Cage (by special permission of the officers) hung suspended from the center of Tomlinson Hall at the Indiana Fanciers' Association, Indianapolis, Feb. 1-5, 1909.

acre fenced in. This place met our ideal and is, in our opinion, the proper way to pen breeding yards. This amount of space to a pen of ten to twelve birds is really unlimited range. Fertility and the best results in hatching can surely be had in this way. The land slopes gently to the south and east, and below the colony houses are acres, both in fruit and brush, for the growing stock; below gently runs the Nashua River on its way to the Sound. We stood long with Mr. Hawkins to view the beautiful scenery and were pleased

in roomy pens were birds being conditioned for shipping, here were birds of his several varieties in really show shape. Next we entered one of the long breeding houses, and Mr. Hawkins wisely let us inspect the Barred Rocks first, well knowing our personal inclinations. In the very first pen we noted an admirable male, a brother to his N. Y. winner, and one in his present condition looks like a champion every inch of him. He has an extra fine comb and head, strong red eye, narrow barred and is the same type as the winner.

His mates, eight hens, from which we selected some feathers for future use, will speak of their quality.

Next we saw a half-brother of the winner, bred from the same sire and a different dam. There is much in him to admire; he surely is a Royal Blue in color and type, besides having a fine head; he had a grandly filled, rounded

The above cut is that of the first prize Buff Rock cockerel at Dearborn, Mich., this season, score 93½ by Tucker. He is a grand bird, practically clear buff and is typical of the Buff Rocks bred by S. D. Lapham, Box A, Dearborn, Mich. This bird will head one of Mr. Lapham's pens this season.

breast, and extra fine barred sickle feathers. The mates here were also eight hens and we assured Mr. Hawkins of our opinion of this mating. Following this we met one of the cockerels shown at N. Y. This fellow was greatly admired by all at the show and the judge had to answer many questions about him. At that time he was slightly immature, not filled out properly. There never could be any question as to his color and barring, or in regard to his shape. He is mated to ten females that look to be strong breeders. Passing through several pens, only stopping to admire, we found mating after mating made with the same skill would expect of a man with this breeder's experience. The last four pens contained pullet matings; each of these were simply grand. The males used are of the bright, snappy color, with plenty of contrast and finely barred under. We well knew Mr. Hawkins' quality in the male line, but were really surprised to note his line of pullet breeders. We also found Mr. Hawkins to be a very careful breeder. He knows his birds and but seldom had to stoop to look at the toe-mark to answer our questions.

From here we went to the colony houses in the large runs and the first to greet us was the New York winner. We freely gave our opinion of him in the New York and Boston show report. He is still the same, even better, if that be possible. We could write a page of his color and barring and another of his shape if that were necessary, but at this time suffice to say, he was a good winner in the hottest class of birds I have ever seen. His mates are ten hens of the rarest quality and some grand birds should come from here. Next was the cockerel shown in the N. Y. pen; a very clear, though strong barred bird; his type was also good to see, as was the strong eye and good head. We thought his wing as good as we have seen. In the next yard was another cockerel shown at N. Y., and a half brother to the winner. He, like his now famous brother, should make a choice breeder, as he is mated with just as much care. Two more cockerel pens followed, both headed by full brothers of the N. Y. winner. They both have his shape and style, as well as the feature of this line—strong red eyes. Each has ten females well matched and finely pointed. Then followed several pens of pullet breeders, while all of them contained rare quality. We were in particular taken with three of these matings. One lot of hens, bred from the females of Mr. Hawkins' 1st pen at N. Y. some four or five years ago, were of a most pleasing type and color and headed by a grand cockerel. Another pen of pullets, all of extra type and size and as near alike as can be, with a large strong cockerel of every requirement.

On our return, we passed through another long house of Barred Rocks, stopping in particular to note one young cockerel, just coming in, that has the ear-marks of making a wondrous cock bird.

We next entered the White House. Here we found some twenty pens of White Plymouth Rocks and White Wyandottes. To describe all those pens is only a repetition of the quality-tale. Type was evident here in both varieties, with good eyes and head points the rule. Here was the old champion White Rock cock, the winner at Jamestown, Boston and Brocton, grand in size, shape and as white as can be. Other pens of similar grade followed. Then came the Dottes, with type and condition prevailing. There were several pens of these of an even high grade and exceptional head points the rule. Mr. Hawkins' record on White Wyandottes at the leading shows is a grand one and dates back to the early days of this variety. He has more than done his share to popularize them, and has well played his part in improving them and bringing them to their present high state of practical value and popular favor.

Mr. Hawkins was also one of the first to adopt the Columbian Wyandottes, and his success with these is only equalled by that he has made with the others. From the first he has shown and won at New York and Boston, besides having sold birds that have won at other shows. Mr. Hawkins devotes one building to them and reports an extra heavy demand for these. We have noted the male heading his first Boston pen, 1909. He has as perfect a wing as we have seen; this, with a grand sound tail, very good comb and fine marked hackle, makes him a most desirable bird and breeder. Other males heading pens here are the first New York pen male of 1908, a beauty in type and markings, strong eyes, etc.; also the first prize New York cockerel of 1907—a very clean and well marked bird. These, with other males of merit, are the ones heading the breeding pens. They are a choice lot to say the least, and are bound to prove their worth as breeders. The females have been selected with the same care; here again type came first, closely followed by conditions and markings. One female, the first Boston pullet of 1907, attracted our notice. We believe her to be the best female we have seen; her size and shape, with a perfect, sound tail and very clean, sharp hackle, make her all one could ask for. One pen of ten pullets, daughters of this hen, average very choice, having superb markings and head points.

Second prize White Plymouth Rock cockerel at Boston, 1909. Bred and owned by Lyman H. Hill, Station 3, Jackson, Mich.

With this visit a desire we had cherished for years was accomplished. We had wanted to meet Mr. Hawkins at home; we had known and heard of him from our earliest days in the fancy, and now after our visit we can say our expectations have been well met, and, Mr. Hawkins, we wish you every success for the future. H. P. Schwab.

BRADLEY BROTHERS' BARRED ROCKS

Our Visit to Lee, Mass., to See the Home of This Famous Line.—A Careful Review of Their Matings and Descriptions of Several Notable Birds.

Bradley Brothers have been breeding Barred Plymouth Rocks since 1883. That was also the year in which we got our first thoroughbreds and we realize that it is a long time ago. Mr. Bradley, Sr., explained to us that the boys always showed a fondness for poultry, and that in that year he went East and bought for them a trio of the best Barred Plymouth Rocks he could get. From that day the success of Bradley Brothers was assured, and as Mr. Bradley was giving me the interesting facts of the early history of the boys' endeavors, I could not help but think that even he, their father, did not fully realize the success his boys have made, and all the real good they have done for the poultry interests of our country. When we consider the value of the poultry industry, and its leading position in this country's business, we cannot help but realize that to breeders like these great credit is due. Scientific mating has wonderfully

placed, that came from them. Most prominent of them is the first prize cock at Chicago, 1906. He was hatched from eggs they sold, and was one of the best Barred Plymouth Rocks we have seen.

The Secret of Their Matings.

After inspecting a few of their pens we could readily see and understand their success. Their one secret is to only mate quality birds. In some pens we found but three or four females with the male. There is a purpose in this, and that purpose is insured quality. Pens so mated, with particular care given to every detail, no matter how small, means much more to the breeder than most will or can admit. It is the plan we have long favored and have mentioned before to our readers. No indifference can creep in here. No filling in with half quality, and this specialty mating is the kind to bank on with confidence for birds of the best grade, and with a breeding back of them that promises future results.

Bradley's Cockerel Matings.

In one of the first pens we entered we recognized a cockerel shown at New York, and one we referred to in our write-up of that show. Here and at this time he was at his

bird's-eye view from the Owen Farms, looking towards Vineyard Sound and the mainland. Owen Farms, Vineyard Haven, Mass.

improved the quality of the birds, both in practical, as well as standard points, and honorable dealing has made possible the tens of thousands of breeders we find enrolled under the standard of quality today.

Just as great oaks from small acorns grow, so this firm of Bradley Bros., with a mere trio to begin with, have grown in size to be one of the largest one-breed poultry plants we have. Their fame is world-wide, and their method of doing business is very well known. Their success has been attained by a study of conditions, and is richly deserved.

Bradley Brothers are nicely located in a section that is just as mellow as is the climate here. This is an old settled section with a history of which it is justly proud. The main part of their house was built 150 years ago, and this has been the Bradley homestead ever since. Some late additions have been added, still the original part is just as sound as ever it was.

The Bradley Brothers' New York show record is a long and honorable one. Of late years they have made but few exhibits. Their birds are always sought for, and we find them at all the leading shows. They personally have won enough to insure their value and to make a demand for their stock that brings tempting offers that are hard to refuse. We have met their birds in every section of this country, and we recall several notable winners that we have

best, with a full tail and every other quality that would put him in the running in any competition. Fully matured and in the best of feather; shape and size are immense, and if one feature showed to advantage above the others, it was his well rounded, deep, full breast. His mates are three hens of the New York Champion line, with nice long backs and every other quality we could wish to see in such hens to properly mate the male.

Next we found a cock sired by Champion's brother, a 3-year-old (if we remember right), with an exceptional wing and elegant under-barring. Here were five pullets, big and strong, with excellent shape and grand quality. Following was another cockerel that was never shown, that has a most beautiful wing. Even, sound surface and extra under-barring in every section. Size, shape and very narrow, clean and sharp barring are his. All this, with an extra fine head, makes him a most desirable and valuable bird in every way. In the next pen was another large and narrow barred cockerel, mated to 3-year-old hens. This mating greatly pleased us. The male is a superb bird, and the females while very strong, were clean in color and of the rarest type.

Close by in a pen of strong females was the fifth New York cockerel. He is an in-bred one-eighth cockerel to Grandson's Brother line, and a fit representative of this, the

most famous of Bradley's male lines. Here we find him finished throughout, with just the right shade of color, and a snappy bar. He is a strong big fellow, is easily 25 per cent improved in condition over his New York show shape. The sixth New York cockerel followed. He has as good body, breast and fluff color as we could wish to see. Here

First S. C. White Leghorn cockerel, Illinois State Fair, 1908; second at Chicago, December, 1908. Bred, owned and exhibited by The Parkside Poultry Farm, N. P. Easling, Proprietor, Box A, Pekin, Ill.

also was shape and size, in fact these points are a strong characteristic of this line. He also was superbly mated with rare quality in every female. Close by was the pen containing the second prize New York pen cockerel. In our write-up of the New York show we said of him: "A most beautiful male, clean cut and sharp barred, but unfinished in tail, which was bound to hold this pen back." Here we found him with a full developed and elegant finished tail, a perfect model, superb in every quality, and showing in his every line, the all that is desirable in a Barred Plymouth Rock.

Near by was the old New York Champion that won first prize at New York as a cockerel and was also awarded championship male. Now at 4 years he is still in extra vigor and looks good for years to come. The grand head points and the strong rich eyes are still his, and his color, in particular under, is as good as ever. Such quality is bred. There is a reason, and the reason is very evident here on all sides.

We inspected several other cockerel matings here, and noted all were made with the same care, every bird was in place and every one fitted nicely, and results can well be expected. All birds are marked, and all matings are made with the correct knowledge of ancestry.

The Pullet Matings.

It was a delight indeed to look through these pens. In the males we noted in particular their narrow sharp bar, features well tipped, shape also was exceptionally good, a feature in this line. Eyes were also right, and head points averaged high. We thought them an exceptional lot especially after handling several and noting their under-barring. Mated as they are to females that have size, shape and a color that is just about right, we are confident of the results in this line. The wings of these pullet bred females deserve special mention. We looked close for this in all birds handled and found grand wings the prevailing rule. This is a very important point and should receive its full credit, as it is of special worth.

The females show a very bright clean surface, with a clean cut, snappy bar, well spaced. They handle well and open up extra. Here again we had the pleasure of handling their pullet that won the female head special at New York, 1909. While she has an exceptionally fine head, and was

a good winner, we thought we saw several others here that were close up. We also again handled the fifth New York hen. She has brightened up grandly, her barring is very clean cut and straight across.

Bradley Brothers' birds met our every expectation. We expected to find a choice collection here, and in no way were we disappointed. Their quality along with their method of mating pleased us. They are intensive fanciers with an eye for every detail. And the result of all this is their great show record, which has firmly placed them up among the leaders of this variety and has brought to them a success that must be most satisfactory.

H. P. Schwab.

DUSTON'S WHITE WYANDOTTES

Mr. Arthur G. Duston, One of the Earliest Breeders of White Wyandottes. This Famous Strain as Seen at Their Home, Rose Lawn Poultry Farm.

Where White Wyandottes are known, the name of Duston is a household word. For a great many years we have heard of this man and his birds, and each year we have seen them at the Madison Square Garden Show, and, as it were, with both feet in the winnings. We have noticed the character of this line of birds and found a sameness that attracted our attention and created within us a desire to go to his home and to see his complete stock, note the mating, etc. We fully realized that this man all alone has accomplished great things in the breed and winning line, and that he has successfully fought the battle for the Wyandottes, and to him in particular much credit for their present popularity, as well as for their sterling qualities, is due. His counsel has been freely given, and his pen has been used to the advantage of the Wyandotte to place them in their present position of being one of the most desirable and practical, as well as fancy, birds of to-day.

Mr. Duston has bred White Wyandottes exclusively for

First prize Buff Wyandotte cock. Exhibited at Buffalo, N. Y., show, 1909, by Genn H. Burgott, Eden Center, N. Y.

something over fifteen years. From first to last he has been their champion; from the very beginning he has shown his birds, and if winning at New York and other prominent shows amounts to anything, they at least point out the breeder who has the goods. His winnings are as long as they are enviable, and we here will only give those at the

late New York show (1909) for a sample. He won 1st, 4th and 5th cockerel, 1st and 3rd pullet, 2nd hen, 2nd pen, 5th cock, shape and color special male, A. P. A. diploma for best Wyandotte male, and first display. This for the second time in three years at this show.

Mr. Duston is grandly located and his farm well named,

Single comb White Leghorn cockerel, bred and owned by H. Cregar & Sons, 447 Hannah Ave., Forrest Park, Ill.

"Rose Lawn Poultry Farm." His land lays just right for a poultry plant, sloping true south. He now has nine long poultry houses and thirty colony coops. All is in ship shape with birds and buildings. Go where you will and you won't find poultry kept any better than they are right here.

The Duston Matings.

Mr. Duston, we were pleased to note, practices the Quality Mating plan (as I call it). The same as Bright, Bradley, Wells, etc., of which I have made mention. Few, if any, of his pens have over seven females in them. The males are first selected and then the females, and only those females that strongly show the quality desired. There are no fillers here. This kind of mating counts for a great deal when quality is the aim.

Description of the Mated Pens.

The first pen we entered contained four females (hens) grand in type, and as alike as can be. The same style combs, the same backs, the same size, etc. One would have to know them real well to tell them apart. The cockerel is a brother of Mr. Duston's first New York cockerel, 1909. He is a beauty in form and as near like his brother as can be, strongly showing his every quality in form and make-up.

With the first prize New York (1909) cockerel, we found six hens. They are all sisters, and a grand lot they are. We don't remember of ever seeing a pen that appealed to us just as this one does. The shape of every bird is close to perfection, each in the best possible condition, etc. The male looked just as sleek as he did at the New York show with the first prize ribbon hanging over him; he possesses all the fine points of the Wyandotte to a marked degree. His comb in form is perfect, and is handsomely pebbled.

Another brother headed the next pen; he is some younger, still now matured, and has every promise of making an extra cock bird. His mates are four of the hens that were in the pen that produced him and his brother (the winner) and Mr. Duston has great hopes on this pen. Then came the first prize N. Y. cock, 1908. He also headed the 2nd N. Y. pen, 1909; at that time his tail was not fully finished. He is at his best now and a very handsome and sound bird he is. Mates are six pullets grandly selected and of a very even high grade they are.

Here followed another strong pen, headed by a cockerel that has never been shown. He has every point of vantage in his entire make-up. The shape of his back, breast, and carriage and shape of tail are of extra value. His mates are five hens, including the 4th N. Y. hen, 1909. A very choice pen to our mind from which grand birds can be expected. The next pen male was another of equal merit,

mated to five large and beautifully formed hens. Then came another brother of the winner, and very much like him, in particular, in head and comb. To him are mated the four females of the N. Y. pen, also 2nd hen and two of her sisters. A rare mating. The next cockerel was of extra size, and so are the hens; with all this they retain shape. We thought this one of the best pens, all considered, and have an idea that Mr. Duston has something under his hat in this mating.

The cock bird sire of the first N. Y. cockerel, we found mated to two pullets and four of the hens with him last year. This grand fellow has proven his worth and should duplicate his great record as a breeder. A choice son of his headed the next pen. The females here are the first and third N. Y. pullets, 1909, and three others of the same line of breeding.

To describe Mr. Duston's matings further would only be a repetition of the above. All his matings are choice and made with a reason. His stock and their condition struck me most favorably. He is a thorough poultryman and with reason proud of it. The birds are clean and seem fit for the show pen at all times.

When Mr. Duston completes his plans he will have one of the largest one-breed poultry plants we know of. His business demands this and he is now working hard to keep up with the ever increasing demands made upon him for stock and eggs.

His annual catalogue is as instructive as it is beautiful. Note his advertisement in this paper which tells how to get one.

H. P. Schwab.

BRED IN THE BERKSHIRES

Wesley B. Barton, Dalton, Mass., Breeder of Barred Plymouth Rocks and Silver Laced Wyandottes.

We met with a pleasant surprise at Dalton, knowing Mr. Barton and having promised him a visit. Mr. Barton is an old and well-known breeder and has been in the fancy

The above reproduction is that of the first prize Buff Plymouth Rock hen at Dearborn, Mich., December, 1908. Score, 93 1/4. James A. Tucker, judge. Bred, owned and exhibited by S. D. Lapham, Dearborn, Mich.

since 1880, excepting a few years when his business called him away from home. For several years now he has been back and is interested to a greater extent now than ever before.

Knowing Mr. Barton's early record, we expected to see

some good chickens at his place, but we did not expect to see the general high grade of stock we really found there. Mr. Barton certainly has the quality in his birds. He well knows the demands of breeding and we look for him to make good at our best shows. He has just again entered the show room, and at Lenox won 1st and 3rd pen, 1st pullet and 3rd cockerel, in a class of 34, on S. L. Wyandottes. He won 1st pen, 1st hen, 1st cock, at Dalton on Rocks, 1st and 4th cock, 1st pullet, 2nd pen. Cup for best display. Special for best female, etc. On S. L. Wyandottes, 1st pen, 1st cock, 1st hen, and specials. Both these are hot shows and among those known as the trial shows for New York and Boston.

The Barred Plymouth Rocks.

Here we found seven pens mated for cockerels and seven for pullet breeding. The cockerel pens came first, each headed by a grand male; in three pens choice large cocks were lording it over the females, while cockerels headed the four others. All have extra size and each shows the best breeding. Good, clean, narrow and straight barring is the rule, with superb head points. One cock in particular, just at his best condition, is a stunner to say the least—fine shape and very close barred. Two of the cockerels were of

his poultry. He soaks cracked corn in sour skim milk for twelve hours before feeding. We are going to try this, for surely his stock showed exceptional vigor and the nests in every pen had eggs in them. Try this, reader, and if you have the opportunity, call on Mr. Barton. You will enjoy the visit as much as I did. H. P. Schwab.

WELLESLEA BARRED PLYMOUTH ROCKS

The Strain That Has Produced the Most Wonderful Female Ever Shown and for Which \$1,000 in Gold Was Refused.
Mr. C. H. Welles and his Matings for 1909.

Before starting on our trip East for the American Poultry Journal we arranged to spend Saturday and Sunday with Mr. C. H. Welles at Stratford, Conn. We wanted plenty of time here to thoroughly study this line that for the past fifteen years has made a reputation and fame that stands as a monument to this man's accomplishments. Mr. Welles has shown his birds at New York year after year without interruption and winning each year at this great show highest

Five White Wyandotte hens owned by F. Gage Cutler, Carthage, Ill., that layed 1,223 eggs in one year, an average of 244.6. The first hen on the left weighs 8½ pounds and layed 253 eggs in eleven months; she is mother of the other four and many other great layers. Send for catalogue and reduced prices for May and June.

his breeding, which is abundant proof of his breeding quality. These cockerels promise much for Mr. Barton. They will not only prove great show cocks, but I look to them to make breeders of exceptional quality and value.

The cockerel bred females have shape and size, along with a strength of color that is sure to breed good males. Size and shape predominate here also.

The Pullet Matings.

Mr. Barton's birds are very strong in these lines; in the males he has four that are far better than we expected to see. One, a yearling cock, is a superb bird, and two cockerels, bred by him, line-bar and have under-barring as good as we could wish for in any line. Shape is a prominent feature here. Mr. Barton says they call him a crank on shape. We should then have more shape cranks like him.

The pullet bred females handle very well. The shade of color and the under-barring is strictly standard, and wings are exceptionally good. It is a very evident fact that Mr. Barton has spent much time in mating. The birds appeared to be rightly placed to us.

Silver Laced Wyandottes.

Mr. Barton has been breeding these old favorites for twenty-six years. The Laced Wyandotte, when right, is a beauty, and Mr. Barton has them as good as we have seen for a great many years. Two pens are mated. Type is the leading feature, closely followed by lacing and head points. The Silver Laced Wyandotte has always been considered one of our best practical varieties. They are very hardy and grand layers.

Mr. Barton is a busy man. Besides his poultry and farm he has a dairy of forty cows. He told us what we think is the secret of the size and much of the quality he has in

awards with his own birds. It is but a few years ago that he won four of the five first prizes, and most of the others as well.

Of late years Mr. Welles' most prominent winnings at the Madison Square Garden Show have been made by his female line. Still his males have been continually close up and have been well placed as his record shows, and when we consider his breeding pen winnings, it will be conceded that he also has the goods in his male line. At the 1909 New York show Mr. Welles won third and seventh cockerel, first, third and fourth hen, fourth breeding pen, color special female and Champion female on "Fluffy Ruffles." At the 1908 New York show he won third and fifth cockerel, first, fourth and fifth hen, and second pen, also winning color special and Champion female. At the 1907 New York show he was awarded third, fourth and eighth hen, second cockerel, fourth and fifth pullet, and first breeding pen, color special female and the Japanese government special vase for best breeding pen in the show, and so on back does the Welleslea record run for fifteen years, filling one of the brightest pages of the history of the great Madison Square Garden Shows.

Stratford, Conn., is located close to Bridgeport on the sound, in a grand section and beautiful climate. This is truly an ideal location to raise poultry, here in the shady runs down the hills, with the houses up high and dry, with the fresh air blowing from the salt water of the sound makes it a most desirable place to go, and when we consider the welcome extended, a place we dreaded to leave. We shall long remember our visit to Welleslea.

The Welleslea Female Line.

Our first concern was to see "Fluffy Ruffles," the hen ten years ahead of her time. When we consider her New

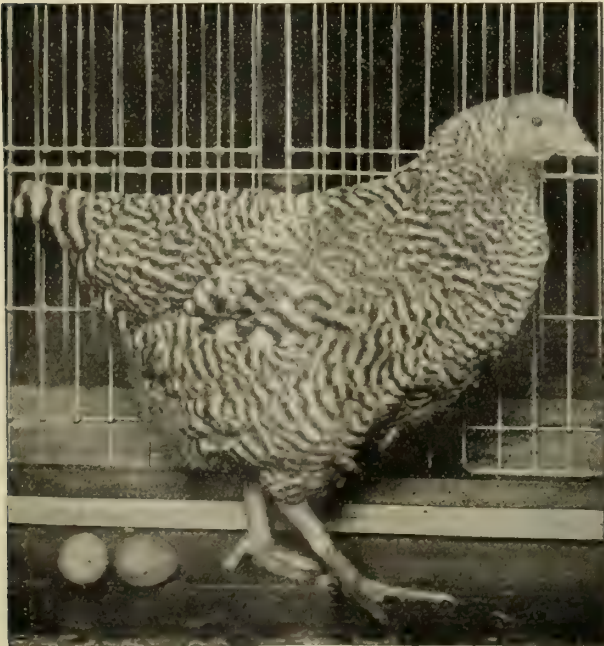

York show record, made during the past three years in the fiercest competition, we can then better understand this extraordinary hen and her wonderful quality. At the 1907 New York show she won fourth pullet and female color

First prize S. C. Buff Leghorn pullet at the late Chicago show. Bred and owned by H. Cregar & Sons, 447 Hannah Ave., Forrest Park, Ill.

special. At New York, 1908, first hen and color special, also Championship female, and at the 1909 New York show she repeated this same record, winning again in the best class of hens ever shown, first prize, with Champion female and color special included. This unparalleled record stands unapproached and we doubt if it ever will be equalled.

With her we found mated four superb hens that are her

The Barred Rock that laid two eggs in one minute at the recent Buffalo show in the presence of several witnesses.

sisters, to a yearling cock of extra size and close to a perfect head and comb, strong red eye, etc. His narrow, sharp clean barring, grand under-color and beautiful form completes a pen of great merit, to say the least. In the

other half of this double colony house are eight daughters of "Fluffy" bred in 1907 that are as alike as can be. All have size and shape, and the same rare color as found in their dam. Heading this pen was a cockerel that for all-around quality appeared to us the superior of all, his shape and size an ideal and color and style of barring all anyone could desire, splendid comb and excellent eye.

Next in the long house we saw three more pens, the females all bred from "Fluffy," and the third and fourth New York (1909) hens, and headed by males of close equal merit to the above. Two other pens of pullet breeders are also in this house, grandly mated and from which the best of results can be expected. Then there are two other colony houses each with two pens of pullet breeders. The two pens in one house are hens, while the other two are pullets. To describe these would only be a repetition of the above. The matings are all superbly made by the master hand and it was impossible for us to find a flaw in any of them. There is character here and results obtained in this way are seen to be beautiful. Chance mating is not depended on here. They are made for a purpose, and this kind of breeding is the backbone of our progress and insures future improvement. It has given us the down-to-date bar, narrow,

The above reproduction is that of the first prize Buff Plymouth Rock cock at Chicago, January, 1908. O. P. Bennett, Judge. Bred and owned by S. D. Lapham, Dearborn, Mich.

and of equal width, with the shade of color that is sound and most desirable.

Cockerel Matings.

Of these we found six in the long cockerel house. Mr. Welles has won well on males in the past. He has produced males that in the open class have been New York winners, as well as those that have headed his winning pens. Each of these matings deserve special mention. Each is made with the same care, every bird just fitted its place and seemed a necessity. The males are a superb, even, high-grade lot, head points prominent, and of a shape and size good to see. Evenness of color and grand carried tails very evident. The females, while strong and to our liking were exceptions in clean, strong barring. These are truly matings of merit, from which results can safely be expected.

If we were to select any point for special mention, beyond the color and barring of the females and their exquisite wings, it would be the eyes of all the birds seen here. We did not see an indifferent eye on the place—the rule was an exceptionally grand eye—a feature most commendable. Charlie Welles is now reaping the fruits of his labors. His birds are favorably known throughout the world and are being bred in its every clime. The breeders have every confidence in Mr. Welles, a confidence that never has been misplaced.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we
positively guarantee, while his subscription
lasts, that no advertisement is allowed in our
columns unless we believe that any subscriber
can safely do business with the advertiser, and
we agree to make good any loss which any such
subscriber may sustain by trusting any such ad-
vertiser who may prove to be a deliberate swin-
dler; but we do not undertake to adjust trifling
differences between subscribers and responsible
advertisers. To take advantage of this guar-
antee, written complaint must be made to the
publisher within two weeks from the date of
any unsatisfactory transaction, with proofs of
the swindle and loss, and within two months
from the date when the advertisement appeared,
and the subscriber must prove that in writing
to the advertiser he said, "I saw your adver-
tisement in the American Poultry Journal."

Meeting of the Standard Revision Committee

The gentlemen in whose hands was in-
trusted the revision of the Standard met
at the Lexington Hotel in Chicago April
5, and after two weeks and two days of
hard work have returned home. The gen-
eral feeling among them seems to be,
"Well done, thou good and faithful serv-
ant." The following gentlemen were on
the committee: Fred L. Kimmey, Chi-
cago, president; Frank J. Marshall, At-
lanta, Ga.; J. H. Drevenstedt, New York
City; Sharp Butterfield, Windsor, Can-
ada; J. A. Tucker, Concord, Mich.; Theo.
Hewes, Indianapolis, Ind.; W. S. Russell,
Ottumwa, Iowa; W. C. Denney, Rochester,
N. Y., and Arthur Smith, Waltham,

Mass., who put in his appearance several
days late.

President Bryant did not show up at
all. We hear he has gone "duck hunt-
ing." Seems like all presidents like to
go hunting ever since we had "Grover."

Mr. T. F. McGrew sent his regrets.
Chicago was too wild and woolly for him.

Anyway, the committee did meet and
did a lot of good work. We understand
shape is to exercise more consideration in
the future than in the past; also that
more prominence is to be given to sur-
face color and less to under color.

It is probable all disqualifications for
color will be cut out and punish these in-
stead as serious defects. Specimens only
to be disqualified for crooked backs, de-
formed beaks, decidedly wry tails, combs
foreign to the breed, shape and color of
legs foreign to the Standard description.

Sweepstake prizes in the future will
be awarded on the following basis: All
white fowls will be handicapped two
points; buff and black, one point; ban-
tams, turkeys and water fowl not to
compete. Members of specialty clubs
can compete for club specials only where
they state in writing on their entry
blanks that they are members of the club
and eligible to compete. This will save
secretaries lots of trouble.

The scale of points in nearly all prom-
inent breeds will be changed. The sec-
tion of symmetry will be changed from
eight to four points; weights will be re-
duced from six to four, and the six points
gained will be used by adding two points
to body and four for eyes, which will be
a new section. Cutting for over-weight
will be discontinued. The instructions to
judges have been revised and made more
definite. A section to be called "Birds
Not Worthy of Consideration" was
added.

Specimens in the Asiatic classes not
weighing more than three pounds less
than standard weight shall not be con-
sidered after November 1. In all other
classes, except bantams, specimens not
weighing more than two pounds less than
standard weight not to be considered
after November 1.

In bantams, specimens weighing more
than four ounces over standard weight
not to be considered.

Weights in Andalusians and Black
Spanish were abolished. The name In-
dian Games or Cornish Indians was
changed to Cornish at the request of both
clubs, but the classification remains the
same. The standard for Cornish was
also changed.

Hamburgs were removed from the
"Dutch" class and will sail under their
own breed name. The standard for Ex-
hibition Games and Game Bantams was
changed and now conforms more closely
to the English Standard.

Eye color in all varieties which call for
red or bay have been changed to "red-
dish bay." In black varieties the eye
will be "black or dark brown." This
reduces the number of different shades
of eye color.

Better description of Partridge color
was adopted and all varieties having this
color will have the same standard de-
scription.

The Columbian Wyandotte will have
the same color description as the Light
Brahmas, as this variety seems to have
the best and most complete description
of any variety. And furthermore, it
coincides with "Nature's Laws," as
shown by the great advance of quality
found in the Brahma of today. And, by
the way, because of this fact the Lordly

Light Brahma is coming back into popu-
lar favor.

Wyandotte shape was improved upon
without materially changing the Ideal of
today. Color in Partridge and Silvers
was improved and description made
clearer and more definite.

The standard for Silkies and Sultans
was completely made over.

Barred Rock shape was not changed ex-
cept description of male back, which was
made stronger and clearer in that sec-
tion.

Color was changed to make the light
and dark bars equal width; also a clearer
description as to character of barring.

The artists, Sewell, Shilling and Bur-
gess, were on hand, and after consid-
erable discussion pro and con it was de-
cided to throw out all the present illus-
trations and illustrate the new Standard
with retouched photographs of living
specimens. It seemed to be the consensus
or opinion this was a step forward and
necessary to keep up with the times.
Some of the present illustrations are as
good as can be made, but it was deemed
necessary to have them all uniform.

Another important point was the deci-
sion to have all parti-colored feathers il-
lustrated by colored plates of feathers
showing them in their natural colors.
This is certainly a wise step, as the color
process has been improved until it is now
possible to exactly reproduce them.

Some specialty clubs had representa-
tives there to present the changes they
desired; the first one was the National
S. C. Red Club.

Secretary Kimmey had received some
500 letters from breeders, all asking for
changes. Everyone thought he was right
and wanted it his way. As a matter of
fact, they could not all be right, and nat-
urally all won't be pleased. But looking
at it from a broad-minded, liberal point
of view, we think the masses are going
to be pleased and that in 1910 we will
have a Standard that may be worthy of
the name "Standard of Perfection." Always
providing it is adopted at the
August meeting, as now recommended.

Chicken Thieving Now Serious

When you leave Missouri far in the
rear it will be when they are asleep and
they don't think much about sleep these
times, either. When the fanciers down
there go after something they bring it
home in their game bag. It was only a
short time ago that they wanted to get a
state appropriation for the big show they
hold every year and they asked for \$2,000
each year and got it. This makes their
state show one of the best in the way
of premiums among the headlines in
showdom.

During the past winter the fanciers
down there have been working for a law
that would make chicken stealing a peni-
tentiary offense, and now they have it,
and woe betide the chicken rustler who
gets caught with the goods, or rather the
hens. Missouri is not the only state in
the Union that has a few left of that
fast disappearing commodity, the expert
chicken snatcher. A couple of years ago
the farm wives of the northern part of
Illinois had a siege of it with these pur-
loiners of our feathered friends. When
they hit a locality or a section they get
all that is worth taking and bad dogs and
alarms and all else seem to aid them, in
that the owner thinks himself secure just
when he is in imminent danger.

Let other good poultry states get a
chicken thief law and enforce it. You or
I can scarcely mention a section of the

country that has not been infested with these plagues. The time to act is now and the best way is to act altogether, as they do down in Missouri.

Co-Operative Poultry Journal

While we do not care to disparage our chicken growing friends who seem to think cooperative poultry journal publishing is just the proper thing, at the same time we shall watch with interest what they do. Theoretically, a business of this sort is a good thing, but the meat in the nut is that coöperation does not always coöperate. To make a publishing business a success first takes a man at the helm who has had years of experience and who never makes the same mistake twice. Further, any business ruled over by a board of men who are not perfectly familiar with it never flourishes. There must be absolute head and tail to every enterprise. Thinking quickly and correctly is best centered in one man than in many, and to act requires the keenest kind of individuality.

Show Leagues and Circuits

Pennsylvania is again to the front!

And she has a scheme up her sleeve that looks perfectly feasible to us. Every fancier knows that it is getting to be a fine bit of figuring to lay out a circuit of shows during these days when shows are so many and so close to each other.

There is one state in the Union that holds something like fifty shows every winter and the dates sorely conflict in any number of instances. At Harrisburg, during March, the fanciers who represented eighteen Pennsylvania poultry associations, met in a twelve hour session and arranged a circuit of shows which will all be cooped with standard single cooping. The dates will be fitted to the associations in this league so they will come at the best time for each. This will be of value to judges as well as exhibitors.

It takes a rich association to own its own coops these times and here is a scheme that certainly kills more than one bird with a stone, in that it accomplishes many desirable reforms all pointing toward the bettering of show conditions. It is high time for the other states to take the matter up and is not too late to get things going well the coming winter.

Who's Who in Hendom

2. Down Indianay Way.

Did you ever notice as the clock of hendom shifts its hands that those folks down there in Indianay always have a hand under the spigot and in meetin' are generally well forward (or even into the amen corner), where they can watch the proceedings and note the effects?

Taking up the state to give the henists there a thorough muck-raking would not be popular unless we began with the center or source of hen wisdom as exemplified in that dear little Indianapolis, within the boundaries of which have been some mighty good Indians.

About the first man I ever heard of in Indianay was Dr. Clarke. And for all that I would like to meet the men who cannot recall a date when the doctor was not sending out game chicken dope from that burg. Of course, it is different today, though not much different.

That man Hewes, who declared when

at the big celebration in his honor at his old home town of Trenton, Mo., otherwise known as the Missouri State Poultry Exhibition—that man Hewes, I say, who declared he loved "everybody from the coal mines to the river," has changed the aspect in Indianapolis some considerable, as Chubb Fuller would say.

Here's how it came about:

Sid Conger, one of the real chicken men on the inside of the inside down there, thought he would do the state's fanciers a good turn if he would persuade said Hewes to abide within the borders of the far famed circle chiefly held down by the kindly doctor. You see Sid could not watch things at home and in town with one pair of eyes, and besides he knew that what the fanciers needed was a good shaking up, and picking out the likely ones for the job, his choice naturally settled on Theo, who finally went down there and set up his tepee.

Your Uncle Sid has large fences, or did have, to keep in repair, both political and on his broad acres of that fertile soil, where his herds of Southdowns, Oxforddowns and Political Upsandowns were wont to gambol. Years ago when they were laying the foundation of the fancy in that state, every poultry journal that you picked up contained a picture of Sid's farm or chickens or self. Sid couldn't help that!

So he and Theo somehow got acquainted and grew to be fast friends, as they say in novels. Theodore threw up his job or position or situation or berth, or whatever you are of a mind to call it, and went down there to begin his real journalistic career. He got onto the political ropes or thought he did, and with Sid to coach him along they got on famously. And I might have added "lived happy ever after," if the story had come to a close, which it has not.

But I almost forgot the doctor!

The doctor is an inveterate lover of game chickens and can easily prove that they are the only pure bred fowls on earth, all others being muts pure and simple. He thinks games, eats games, breeds games and judges games, and one of the natural wonders of the state is that he can be pointed to with pride as the only man who ever loved one fowl and only one.

Out on his lawn he tethers them out like the Cubans do. He knows how to apply all the Cuban methods, as he has gone right down into their country and lived and fought them with the natives and beaten them at their own game. Out on his farms he raises nothing but game chickens, and on the "walks" where he keeps his favorite cocks or stags he will let no one say a word that does not pertain to heels, fitting, muffs, gaffs, Trans-Atlantics, etc., etc.

Wherever the game chicken is an idol there the name of the doctor is a household word. Everybody gamewise knows him or has heard of him. He has visited France and England, especially the parts of those countries where the best games grow and can tell you the names and incidents in the lives of all the famous cockers who ever handled a "chicken."

Then there is Hope, Indiana, that cannot be overlooked. I never knew and neither did you, that Hope was on the map till the Fishels put it there. But one day, in looking over a hen journal, we saw the town of Hope advertised in rather certain tones as being the home of this and that in chickens, and since then have hoped to make Hope during our peregrinations through hendom.

One thing rather strange about this

town of Hope is that the fanciers who live there and have their being in and about its delightful avenues of stately elms and hawthornes (see guide book to Hope, Ind., by William Miller), are busy sawing wood rather than running for office or guiding the ship of Hendom through the dark and dank waters it must plow its course. (Phrase taken from Dave Nichols' celebrated speech accepting another term, according to Line Orr.) I do not mean that they are sawing wood literally, my meaning being purely a figurative one.

Being on Easy street they all see it sawed—take this literally. This guide book to Hope is one of the interesting things about the town, and being compiled by a man from Missouri who went there to be shown and who says he was shown, is very reliable in every way. Mr. Miller relates an incident which is worthy of being republished here, and we do it with apologies and give credit for it to that rather extensive tome.

Mr. Miller, after spending a pleasant evening with that gentleman best known of the town, Mr. U. R. Fishel, awoke the next morning as the birds were giving vent to their feelings, and as he lay there thinking over the great work that was being carried on in the pure bred poultry business in and about the town, heard some one driving up the gravel from the front entrance. He looked out and beheld Mr. Fishel coming home with a team of horses he had said he was going out to look at that morning.

He had gone and had bought them before breakfast!

"And," Mr. Miller adds, "it looked to me as though it was an everyday occurrence, so matter of fact did Mr. Fishel go about it." All of which only goes to show the wonderful business velocity of the buyer.

Changing the scenes a little we have the spectacle of Sam Nofztager doing his best to make a breed of Partridge Plymouth Rocks, while the fans who are working along with Whites and Barreds pass the nudge to one another and think they are looking wise. It takes more than an ordinary henhiemer to make a good breeder, and it requires more than a wisehiemer henhiemer to push a new breed or variety successfully, and Sam is doing it.

When you come to think of it you will admit that there are not a great number of breeders who have made new things go well. And thinking again it would not seem that there are a great many new things of merit. But the Partridge Rocks are new and meritorious and the number of those who are falling into the moving van behind them is steadily increasing. Indianay will not be found to be a tail-end in this procession, her motto being that where three are in a race, never be the one who gets the flag. Indianay, it will be remembered, has been right there all the time and overtime on new things.

Speaking of new things calls to mind that one fellow (who recently sued the express company for the express purpose of expressing his feelings over the way the express company had expressed his birds) was right in the van and had hold of the reins a part of the time when the Orps. were coming in. Hazelrigg, Indianay, had a fan within her borders who could not get recognition enough at home, so he sent elsewhere and had it shipped in, in great plenty. He has been more of a breeder than a buyer, always, though buyers were going to Byers since Orps. hit the central west.

DR. LYONS, 252 Day St., Pekin, Ill.

Tippecanoe, after which field there has been a multiplicity of birds named and some men, lives one Keeler. He's been there longer than the length of time that G. C. has left Q. and called B. his hunting preserve. Keeler has roped and hog-tied his share of the W. W. orders that go flying through the mails. That is the one way of maintaining enough enthusiasm to stay in the business and the fancy. Let the enthusiasm over your birds be on only one end of the line, and it soon pales to a fleeing wolf-tail. You must have a responsive connection in order to get the completed circuit. And to keep doing business you must be something of a lineman, keeping the wire in repair and the voltage up to its sanest maximum.

The Spot Light

They say that Charley Ring would rather figure out the time in which he could move 16,000,000 yards of dirt or complete the Panama canal than do most anything else—unless that else pertained to White Rocks. There are not many henists who know Charley is a civil engineer.

When Charley Cyphers isn't inventing a device whereby the incubator thermometers may be read by pushing the button of a device, said button at the head of one's bed, he is visiting big incubation plants, cellars, garrets and cocklofts, studying incubation, incubation, incubation. It is his vocation, avocation and all other 'cations.

Frank Hare takes his camera with him night and day. If he catches a glimpse of anything that looks like a pure bred bird, out he jumps from his big green auto and, bing! snaps a picture, then and there. Should he chance to forget his photo machine he makes a pen sketch, as his ever ready Waterman and note book are never without his pockets.

H. P. Schwab dotes on Barred Rocks. he's asleep. Traveling, he heads for the Rocks; writing, he eulogizes them; judging, he judges them. Should there be any state secrets of the breed in the air, he quarters across the field, catches the scent, goes right up into the midst of

If he isn't thinking of them, it's because the covey, figuratively, and points—then he flushes, and straightway the secrets are his, laid away in that lobe of his brain devoted to the Goddess of The Bars. And they say that of all his lobes, the Rock lobe is major.

IN TRIBUTE.

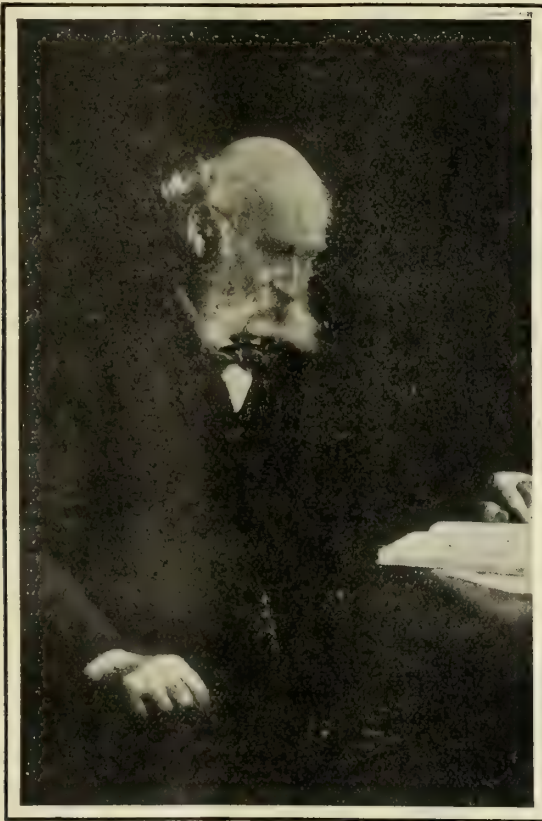

And with great sorrow are we called to chronicle the death of that man we all admired, who, living this life better than he knew, left the world at large, and the fancy in particular, better than he found it.

Mr. Williams was born in Raynham, Mass., February 7, 1829, the son of Simeon and Eliza Ann (Leonard) Williams. He was a lincal descendant of Richard Williams, founder of the town of Taunton. He was first employed by his father in the brick business and entered the grocery business as a clerk for E. T. Jackson & Co.

Later he became a member of the firm of Jackson & Williams, wholesale and retail grocers at 41 City Square, and was in this line of business for twenty years, and for twenty-eight years con-

His sword, carried in the Civil War, was a gift of the Sunday-school of the church. For a number of years he was a director in the Bristol County National Bank, and was a trustee of the Bristol County Savings Bank at the time of his death. Mr. Williams was twice married, his first wife being Nancy F. Walker and his second Amelia F. Hall. His two sons, Charles T. and Allston E., were by his second marriage. He leaves a brother, Laban W., and three grandchildren.

Mr. Williams came of the sturdy stock that helped to build up the country. He was for many years in the grocery business in this city, the firm at one time being Jackson & Williams, the late Elisha T. Jackson being his partner. When Mr. Jackson withdrew from the firm Mr. Williams continued the business as P. Williams & Co., and

—Photo by courtesy Reliable Poultry Journal.
PHILANDER WILLIAMS

ducted it as P. Williams & Co., Mr. Jackson retiring. He was a member of the old Niagara Engine Company, in the fire department, and in the Civil War enlisted with the nine months' men and was commissioned as second lieutenant of the regiment of the Nineteenth Army Corps, Department of the Gulf. He was active in the Bristol County Agricultural Association, serving for many years as treasurer and president.

He was a charter member of Ionic Lodge, A. F. and A. M., and served twenty-five years as marshal. He was also a member of St. John's Commandery, Knights Templar, and St. Mark's Royal Arch Chapter. He was a member of the Trinitarian (Broadway) Congregational Church, and was at one time a member of the choir and teacher in the Sunday-school, and was a member of the prudential committee for many years.

for many years longer had one of the largest stores in this section of Massachusetts.

During the past few years he has still continued his poultry business, being associated with a Randolph man in breeding fine fowl.

This business he within a short time decided to drop and to take up his residence with his son. He had concluded all his business arrangements in this respect during the week previous to his death and was prepared to enjoy a season of well-earned rest when the end came.

Some years ago while traveling he had the misfortune to suffer a severe injury, losing a foot and, being even then advanced in years, his friends and family feared for his health and life, but with indomitable pluck and a strong constitution he withstood the

rigors of hospital treatment and was soon able to be about again.

No more kind soul has been taken from among us for more decades than a few, than that of Uncle Philander Williams, dean of the fancy and one of

the strong and upright pillars upon which the fancy was founded. Here is a man who received the deferences of all the men who knew him and who, while among us, was paid no little tribute. Losses such as this in the ranks of the fancy of

Americans are hard to sustain, for it may truthfully be said that he ever lent the respectability of himself to the end toward which we should all strive.

Loved by all who knew him, revered by those to whom his name was a synonym for the strictest probity and height of personal character, we are left to mourn him. We are never so aware of the real assets of the fancy as when the death of one of our truest characters leaves a gap in the ranks. From the date of his joining the American Poultry Association he has been one of the most earnest workers, and early was recognized as a man whose services would be invaluable to the cause of better fowls and more of them.

He became a member of the American Poultry Association in January of the year 1874. From that time he has been a worker in its affairs and one of the leading lights when it came to standard making and revising, especially valuable in helping the breeds and varieties he has been identified with. And it would require a more thorough resume of this man's noble life than we are able to give if justice were to be done him in recording the acts and writings he has blessed the fancy with.

Never has there been a member of the fancy so gentle in his treatment of those who disagreed with him; never has there been a breeder who could utter a word derogatory of his business methods, nor is there a man who has given more of an uplift to the fancy by his honesty as a breeder and a judge, than Philander Williams. He was keen for the truth everywhere, both in and out of the show room.

Again, the fancy loses one of its supports and an adherent who lent dignity to the work. "The tinkling of the camel's bell" has been heard and he is passed to the Great Beyond. But his soul still lives, and like all that emanated from it, the splendor and munificence of its rays will continue to cast about us a golden light, appreciated the more by those of us who felt the beauties of his character and his inner self. In life he loved us; we knew him Just as he was—a man 'mongst men, Courageous, strong, true, for the right He stood. He left us better for the fight. His memory we e'er will cherish, 'Tis not of us to see it perish.

PITTSFIELD POULTRY FARM CO.

This Great Plant Is Devoted Exclusively to Barred Plymouth Rocks—Exhibition and Utility Stock—Day Old Chicks a Feature.

By H. P. Schwab.

One of the largest poultry plants we have ever seen is that of the Pittsfield Poultry Farm Co., at Pittsfield, Maine. Here business is carried on at a wholesale rate. One would wonder, after inspecting this mammoth plant, what becomes of all the chickens raised here. For here are two Hall Mammoth incubators, with a 12,000-egg capacity, and a brooder house of nearly 15,000-chick capacity, running, as it has for some years now, at full speed. Chickens are turned out here several hundreds daily. Our surprise met the climax when we were shown their orders and found the demand for both day-old chicks and eggs for hatching surpassed even their great capacity. If the reader has any doubts of the immensity of the poultry industry, let him then consider that

Poultry Helps for May

The LEE Sprayer holds a quart; is well made, strong, and durable, and has at least two **distinctive** features to commend it to you, viz.: 1st, it is the **only** sprayer of this style with which **entire** contents of container may be sprayed directly **upwards** as well as in all direction; 2nd, it may be laid down without contents of container spilling. Invaluable for spraying the walls and ceilings of your poultry house, or for plants, bushes, and shrubbery.

Lee's Lice Killer

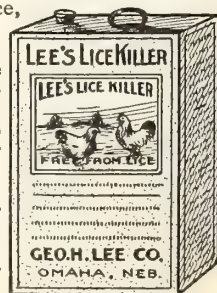

Every family needs a sprayer. The Lee has no equal for all-around service, and the price (50c) makes it all the more attractive. It touches the spot. It saves the chicks. If the percentage of chicks that die of Bowel Complaint and Cholera were known it would startle well informed poultry raisers, and would bring from all raisers more pronounced effort to counteract. Hatching chicks is not so difficult. Raising them—bringing them to a profit-producing stage is where your energy and effort goes. **Germozone** is a tonic, a bowel regulator, the best cure for Bowel Complaint, Cholera, and other diseases so prevalent during the summer months.

Is your poultry experience costing money or is it making money for you? Much depends on the lice question. Is it bothering you? **Lee's Lice Killer** ends all lice troubles quickly. It is the simplest to apply and surest of results. You neither dust, handle, dip, or grease—only paint or spray the roosts or walls of the poultry-house. Surest because it **kills** lice, mites, jiggers, bedbugs, and vermin of all descriptions, whether in the poultry-house or on the fowl—in any climate—under any condition. **Lee's Lice Killer** helps to keep your poultry and your pocket book in a healthy condition. Quart 35c. Half gal. 60c. Gal. \$1.00. Write for free books—"Mandy's Poultry School," "20 Years with Poultry," or "Incubator Hygrometry."

Price 50 cts. (postpaid)

GEO. H. LEE CO., 1134 Harney St., Omaha, Neb.

there are hundreds of large plants and the end is not yet—there is room for more.

Thoroughbred Barred Plymouth Rocks are the aim here at this plant, and as Mr. F. W. Briggs, the part owner and manager, informed me, Barred Rocks meet our every requirement and are best suited to this or any size plant.

They have one large house devoted exclusively to matings of exhibition Barred Plymouth Rocks. Here we found birds of both matings of exceptional merit, birds that have won at Portland, Boston and other large shows. Mr. Briggs is a practical Barred Rock man. His work so far has been rewarded with success, and we confidently look for future achievements with this line.

Their principal winnings the past season were made at Portland, Maine, and at Boston. At Portland they won in a large and strong class of birds, first and second cocks, first and second cockerels. Five places on hens and pullets and second pen. The A. P. A. medal for best cockerel in the entire show, along with other specials. At Boston, in one of the best classes of the year, they won eight regular and special prizes. Their fourth prize pullet impressed us strongly. Her shade of color and style of bar were beautiful. Judge Welles told us her shape and style of bar pleased him, but that she required a couple of weeks to show at her best.

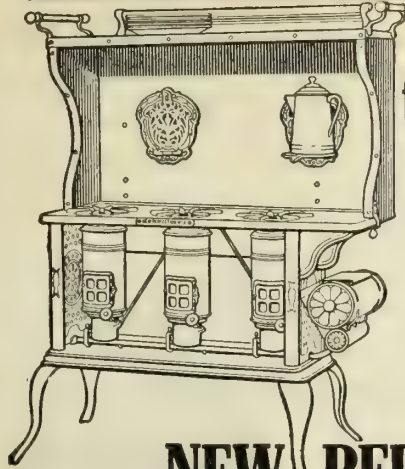

The Exhibition Cockerel Matings.

The cockerel matings are headed by Boston and Portland winners. The males have excellent shape and the narrow, snappy bar so much desired. The fourth Boston cock headed a pen of eight strong females. We wrote up this bird in our report of the Boston show. His mates are most desirable, evenly matched and finely pointed. Another grand cock, sire of their Boston winners, headed the next pen. He is a strong breeder of quality cockerels and looks it. The other matings found here are of the same high tone all through. The birds have size and if we were to select another special feature it would be the evenness and uniform color

throughout. The males of this line have grand heads and they stand up right, with legs straight and set well apart.

The Pullet Matings.

There were several of these and, like the above, nothing has been spared to

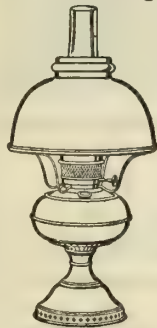

Don't Heat the Kitchen

All the necessary family cooking may be done as well on a New Perfection Wick Blue Flame Oil Cook-Stove as on the best coal or wood range.

By using the "New Perfection" Oil Stove, the annoyance of an overheated and stuffy kitchen is entirely avoided, even in midsummer. The scientific construction of the

NEW PERFECTION Wick Blue Flame Oil Cook-Stove

ensures quick work and a cool kitchen. The "New Perfection" has a substantial CABINET TOP for warming plates and keeping food hot after it is cooked. Also drop shelves on which to set small cooking utensils—every convenience, even to bars for holding towels.

Made in three sizes. Can be had either with or without Cabinet Top. If not at your dealer's, write our nearest agency.

The **Rayo Lamp** is substantially made of brass, finely nicked and very handsome. Gives a powerful light and burns for hours with one filling. Portable, safe, convenient—just what every home needs.

If not with your dealer, write our nearest agency.

STANDARD OIL COMPANY

Send at once for 6c postage. **F. A. TECKTONIUS, Route 7, Racine, Wisconsin.**

COREY'S GOLDENGLOW STRAIN OF BUFF PLYMOUTH ROCKS

The Champion of New England

As a breeder and exhibitor of Buff Rocks for twelve years, my past and present winnings make the above statement an acknowledged fact. At the great Boston Show, January 12-16, 1909, on eleven entries my Buffs won fourteen ribbons and all association cash specials for best display, best cock and four hens; best cockerel and four pullets; also winning the State Cup for best cock, hen, cockerel and pullet; also the District Cup, comprising all the New England states, for best cock, hen, cockerel, pullet and pen. This is acknowledged to be the grandest victory ever won at Boston on Buff Rocks.

I have bred and sold winners all over the Union. They have been sold and shipped to Japan for government breeding purposes. I bred and sold the second pen at the World's Fair, St. Louis, and many New York winners, and "best of all, I breed all my winners."

Shall have a few settings from these winners for sale at \$5.00. A limited number for sale. Would advise placing your orders early. Circular free. **gs**
half price after June 1st. Address

FIRST LESSONS IN POULTRY KEEPING

We may safely claim that never before in the history of poultry literature has any publication so thoroughly and systematically handled the subject of proper poultry keeping. Beginning with the elementaries—the very first principles—the student has been taken along step by step, each lesson followed by the next in its logical order. This policy of "begin at the beginning" enables the laying of a solid foundation of useful knowledge, the necessity and value of which for future success, cannot be overestimated. The following list, a complete "lesson" being devoted to each subject, will help you to form some idea of its great value.

- Winter Rations for Laying Stock.
- The "Hows" and "Whys" of Feeding Laying Stock in Winter.
- General Principles and Rules for Poultry Breeders.
- Putting Principles of Breeding into Practice.
- Hatching Chicks With Hens.
- Rearing Chicks With Hens.
- The Care of Chicks from Weaning to Maturity.
- Points to be Considered in Poultry House Construction.
- Two Plain Cheap Poultry Houses of Simple Construction.

- Five Good Small Poultry Houses.
- Summer Management of Fowls.
- Continuous Poultry Houses.
- Incubator Rooms and Brooder Houses.
- Simple or So-Called Scientific Poultry Feeding.
- Poultry House Fixtures.
- Poultry Fences and Yards.
- Getting Ready for Winter.
- Selecting and Fitting Exhibition Birds.
- Fattening Fowls.
- Selling Market Poultry and Eggs.
- Selling Thoroughbred Poultry and Eggs.

The price of the book alone is 50c, postage prepaid, but note our great **SPECIAL OFFER** of a yearly subscription to Farm-Poultry, the great National poultry paper, and a copy of "First Lessons in Poultry Keeping" for only 75 cents. (Price to Canada, 90 cents) : : :

This offer is made you strictly on approval. If for any reason you are dissatisfied return the book in good condition and your money will immediately be refunded without any comment whatsoever. We know that you would not part with this book for ten times its cost if another copy was not procurable. We can hardly conceive of anyone overlooking this opportunity who desires practical, thorough, systematic and dependable instruction on poultry keeping. To obtain the benefit of this splendid combination you must send orders and remittance to

FARM-POULTRY PUB. CO. :: Room A, BOSTON, MASS.

make them the equal of any. The males line-bar well and have a surface and under-bar most appropriate and most desirable. They are clean-cut, sleek specimens of true form, very nice heads and strong, rich-colored eyes. The females are all line bred, strongly showing every character needed and demanded. We handled many of these. The color and style of bar is just about right. Here good size is also an important factor and head points average above par value.

The condition of the birds seen here is worthy of special mention. The coops are kept clean and the birds are in the best of health. Every detail of their comfort is looked to and by the bushels of eggs we saw here we can safely say that results prove the worth of all this.

The Two Great Incubators.

Entering the incubator cellar, we found two Mammoth Hall incubators, with a total capacity of 12,000 eggs, working at their limit, hatches coming off daily, only to be at once re-set. The heating is done by two boilers. The temperature in each compartment is regulated by raising or lowering the egg trays. This was a new sight to us. It surely is a labor-saver and as we were shown the complete reports of all hatches for this and last season we can safely say it is the most practical for these conditions.

The brooder house is 250 feet long by 20 feet wide. It is partitioned into four sections. There are 200 hovers, with a total capacity of 10,000 chicks. This house, as well as all others, is well built and every device known to add to the efficiency of the plant is employed here. There are also 70 outdoor brooders, with a capacity of 4,000 chickens.

There are two breeding houses, each 430 feet long and 20 feet wide. Each has a capacity of 2,000 breeding and laying hens. Each pen has two yards, the one to the south being 200 feet long by 20 feet wide. Those to the north are 75 feet by 20 feet. In this way the yards are kept green. There are double swinging doors in the center of the pens and a car running on overhead tracks is used to feed, water and clean the pens. The birds roost at the north side, over dropping boards, and each pen has 20 nests.

The birds kept here are all Barred Rocks, with a special view to utility and quality. Mr. Briggs told us that he would not be fully satisfied until every pen on the place was filled with the highest grade of stock, and to this end every energy is now bent.

The day-old chick business is the feature here at this time of the year. They are shipped most any distance in perfect safety, 50 in a box with burlap top. The boxes are nailed on slats one over the other and three inches apart. Prices range according to quantity and the ever increasing demand for day-old chickens will necessitate the enlargement of this plant, which in itself speaks volumes for the character of this business as conducted.

We came away glad we had made this visit, and much wiser. The location of the plant is ideal. It is a beautiful country, although they do have cold weather up there. The air is very dry and the cold is felt no more there than it is around the lake regions.

The season for hatching with hens has arrived. April is the month to hatch chicks for November layers.

SUNNYBROOK FARM.

Devoted to White and Columbian Wyandottes—This Strain Has Rapidly Attained a Foremost Position—Notable Winnings of the Past Year.

By H. P. Schwab.

Twelve miles west of New York City and one mile over the mountains from West Orange, N. J., is located Sunnybrook Farm. Mr. Charles D. Cleveland is proprietor and Mr. George Austin manager. Both these gentlemen, as well as Sunnybrook birds, are generally known. We had met them on former occasions and were greatly pleased to meet them at their home and among their work.

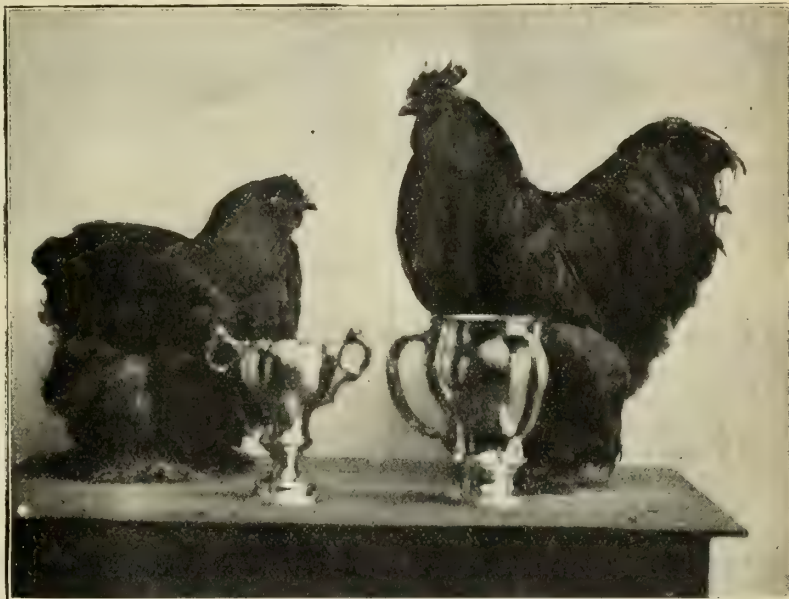

The farm lies with a natural slope to the south and its entire 37 acres are devoted to the growing of poultry. There is much to interest one here on this modern, up-to-date poultry plant. Naturally the stock is its chief attraction for the poultryman, which is closely followed by the fresh-air poultry buildings, and last, but by no means least, the hospitality shown the visitors.

Mr. Cleveland is a lawyer with offices in New York City. We do not know whether he is a corporation or trust lawyer or not, nor do we care, for we would trust him just the same, as would all that have ever met him. His poultry plant is run on strictly business principles and quality is the one aim, while Mr. Cleveland's greatest concern is to fully please his patrons. The positions of honor and trust this man holds proves his worth to the fancy far better than any words of mine can. For, besides being president of the National White Wyandotte Club, he is also executive officer of the Columbian Wyandotte Club and president and treasurer of two

poultry associations. Mr. Cleveland above all is a thorough poultryman and a very close student of all matters relating to better poultry.

In Manager George Austin Mr. Cleveland has an aid with his same ideas. He knows the Wyandottes well, is a most

There are several large poultry houses here. Their fresh-air poultry house in particular struck us most favorably. Curtain partitions and curtain fronts; no glass is used. We believe theirs are built on an original plan and we would like Mr. Cleveland to supply the Amer-

BUFF COCHINS.

A pair of the world famous Buff Cochins as bred and exhibited by Dr. A. A. Gossow, St. Charles, Mo.

careful breeder, looking after every detail personally. With these conditions prevailing we look for Sunnybrook to even better its former grand record and make one our most successful poultry plants.

ican Poultry Journal with a complete description of his buildings for the benefit of our readers, and to also state what, if any, further improvements he would suggest. The condition of his birds proved the value of his houses and

WHITE and BUFF WYANDOTTES

Egg Laying and Prize Winning Strains. At the Vermont State Fair this season we won four first, three second and two third prizes. The poultry exhibit at this fair was said to be the largest ever seen in New England—over four thousand birds competing. This number does not include pigeons. The competition in the Wyandotte classes was very strong. It was worth while to win there. At the different county fairs we did, of course, even better. Eggs for Hatching—White Wyandottes: Utility Stock, \$1.50 for 15 and \$6 per 100. From best pens, \$3 for 15 and \$10 per 100. Buff Wyandottes, \$3 for 15 and \$10 per 100. Send for circular. Please mention American Poultry Journal when writing.

The Famous "Bar-letts"

HOLD THEIR CLAIM, CHAMPIONSHIP WINNERS AT BUFFALO

Illustration of a Barred Rock chicken, showing the characteristic barred pattern on its feathers.

First and Champion Hen at Buffalo, 1909

At the wonderful Buffalo Show, Feb. 1 to 6, 1909, George W. Hillson's Barred Plymouth Rocks made a phenomenal record against the best of the East and Central West by winning Four (4) of the possible Five (5) First Prizes, Third Cock, First Cockerel, First and Second Hens, First and Fourth Pullets, First Exhibition Pen, the New York State Challenge Cup for Best Cock, Hen, Cockerel and Pullet. My "Champion of Buffalo" First Prize Cockerel is a masterpiece in the art of breeding and is beyond question the greatest Barred Rock living. My Pullet "First Attempt," winner of Three (3) Specials, New York, 1907-08, is here First Hen and Champion Colored Female in the show. Her record is equaled by no other Barred Rock female in the world. My First Prize Exhibition Pen contains the grandest conformation of color in male and females of any exhibition pen that ever graced the showroom.

For sale: Birds that will reproduce themselves. Eggs from the grandest matings in the world, at prices within the reach of all. One setting, \$5.00; two settings, \$9.00; three settings, \$12.00; four settings, \$15.00. Fine illustrated circular free.

WHITE PLY. ROCKS

The kind that win wherever exhibited. Look up my record at the late Boston and N. Y. shows. Your inquiry will receive my personal attention. Eggs from prize matings only \$5 per 13. Order early.

M. L. Chapman - Wethersfield, Conn.

we consider them as practical as any we have seen.

White and Columbian Wyandottes are specialized here. There are also several large pens of extra sized White Leghorns that we understood were bred for utility purposes.

The White Wyandottes.

Of these there were 10 pens, each a mating of uniform quality. We looked these over closely and were favorably impressed with the way the matings had been made. It is evident that every detail has been considered and no bird is used in any pen that does not come up to a high quality grade. We would like to describe all their matings as we saw them to be worthy, and if it would interest our readers, but at this time will select a few and from those conclusions can be safely drawn the character of the entire flock.

Pen No. 1 is headed by a winning cock bird of merit. His depth from back to keel is ideal, while his breast, back, body and tail formation are all desirable. Head broad, eyes grand and comb beautiful. His seven mates show every breeding quality in form, style, vigor, etc. Color, quill and all chalk white. This pen is a hummer.

Pen No. 2 is headed by another cock with grand head and comb, and is grandly finished. We believe, if memory serves us right, that his mates, six pullets, were all sired by him. Both he and the females have extra size, with ideal shape and the pen impressed us favorably.

Pen No. 3 contained another beauty male mated to five females. The head points of this entire line were of extra value. No. 6 is headed by a young cockerel that is smooth, very white and with a great head. The five hens in this pen are all sound in shape and color.

Pen No. 7 is grandly mated. Shape of male ideal and a simply grand head. His six mates are of the same choice quality in every respect, a mating superbly made that should produce the very highest grade of stock.

Pen No. 9 is headed by a young cockerel that promises much. We understand his mates, four hens, were the first prize pen winners at the Dover show, while all of those have good head points. We thought one in particular excelled in this respect.

It was very evident here that shape is borne foremost in the minds of Messrs. Cleveland and Austin. This bids well for the future of this line. Where type is maintained as it is bound to be here, then the battle is more than half won. We handled birds in all pens and noted their whiteness. This, with the condition in which all are kept, showed them at their very best value.

Columbian Wyandottes.

The Sunnybrook Columbian Wyandottes have a record of winning at our best shows that speaks well for this line. When we consider what they have won the past season we can better understand the quality bred here.

At the New York State Fair, September, 1908—First pen, second and third pullet.

Hagerstown, Md.—The Great Fall Show, October, 1908—First, second and third pen. First, second and third hen. Third and fourth cockerel, and fifth pullet, with nearly 100 birds competing.

Chicago, Ill., December, 1908—First and fourth cock. First, third and fifth hen. Second and fourth cockerel. Second, fourth and fifth pullet. First, third

One grand pen every bird one to one and one-half pounds over weight, scoring 94 to 96. Eggs \$3; two \$5.

E. E. WILSON, 921 Ashland Avenue, Indianapolis, Ind.

and fourth pen. Challenge cup for best display and five out of nine club ribbons, making a total of 42 points to 34 awarded to nearest competitor.

At the 1909 New York Show—Second cock, fifth hen and third pen.

Orange, N. J., 1909—First cock, first and second hen, first and third cockerel, first and second pullet, first pen. Silver cup for best display and all specials.

Besides this grand record, winners have been sold for upwards of 15 other shows, making a grand total record of winnings for this one season, all its own, and one to be proud of.

The Columbian Matings.

Pen No. 1 is headed by the third New York pen cockerel. His quality is grand, showing to best advantage the true Wyandotte type. Markings excellent, and head points fine. His seven mates have been carefully selected and good results should be had here.

Pen No. 2 is headed by first New York cockerel, 1907. A superb bird in every way. He has made his mark both as a winner and as a breeder. Mated to seven females, grandly matched in quality. The hackles are exceptionally good, with head points following closely.

Pen No. 3 is headed by the first Chicago cock. He also won second at the New York show, 1909. A winner of great worth and with him are mated the first Jamestown hen, first Hagerstown hen, first Chicago, and the second New York hens. Here is a winning pen all through and a beauty in every respect. Head points and eyes are a strong feature.

Pen No. 5.—This male was second cockerel at Chicago, December, 1908. He is now fully matured and beautifully finished, markings of hackle superb. Mated to seven hens of merit.

Pen No. 8.—The male here is a son of their first cockerel at New York, 1907. He is quite dark, with a strong hackle and perfectly sound tail. Strong eyes and extra head. Mates are seven

hens and pullets carefully selected for this male.

Pen No. 12.—Male is a brother of the above, showing similarity to a marked degree. Here also grand males, with exceptional, hackles should be bred. The other matings of this line were of equal merit. No indifferent quality birds and no fillers-in of any kind are used here. These matings met our sanction, and with this kind of mated stock improved quality can most reasonably be expected.

Their guarantee on eggs for hatching, as well as their method of selling birds, are approved, all of which are fully explained in their mating list, should receive commendation and the support due.

SHAYLOR'S BARRED PLYMOUTH ROCKS.

One of Our Oldest Strains—They Have Won at New York, Boston and Other National Shows.

By H. P. Schwab.

In trying to do Charlie Shaylor and his birds justice at this time we are working under difficulties. While we were there and inspected his birds, Mr. Shaylor was away. We had been informed he had been married a few days before, so were obliged to excuse his absence, as our trip could not be postponed any more than his could. As this good news had to come out, Charlie, we may as well tell it and join with your many friends in well wishes.

The Shaylor strain of Barred Rocks has been bred with winning success for many years. They have won their share of honors at New York and Boston, and their nearly clean sweep at the New York State Fair is fresh in mind. Mr. Shaylor's winnings tell but half the story. For years he has sold birds that have been placed winners to his own credit, as well as to those who have dealt with him.

We here again had the pleasure of handling his second prize Boston, 1909, pullet. She is most beautiful in shape, color and barring. Being finished here at this time she shows at her best. Several fine cockerel bred males, along with the cockerel that won the surface color special at Boston, were seen here. Cleanliness and evenness of color is a prominent feature here. Both the male and female line show strong breeding qualities in their entire makeup.

We trust that at our next visit Mr. Shaylor will be at home and that we can then get the information required to do him and his birds full justice.

GOLD MEDAL BUFF ROCKS.

The Strain Made Famous by S. D. Lapham, Dearborn, Mich.

Nearly a year ago we were at the Dearborn Poultry Yards to see the Gold Medal strain of Buff Plymouth Rocks. Since then we have heard so much of this strain here in the East that we believe it a duty to here make this mention.

We have also lately been favored with Mr. Lapham's mating list and catalogue. This book is like a "new idea" to all of us, and plainly shows what can be accomplished by a progressive poultryman. It is needless for me at this time to say anything in partic-

THE BUFFALO, N. Y., SHOW.

Buffalo's 1909 Show a Display of Merit. The Management Perfect and Future Success Assured—Notes of Interest.

By H. P. Schwab.

At this late day it is only our purpose to make some mention of special features of the Buffalo show. This Association is a thoroughly fanciers' affair and with the generous aid given by the public promises to take its place along with our best and greatest shows.

The show was cooped by the Empire Cooping Co. in their usual satisfactory manner. Mr. Wemple personally was in charge.

The competition was keen in all classes, and quality the feature in all. Many rare birds were shown here. The breeders recognize Buffalo's place and value of its premiums, and larger, better and stronger classes are assured in future.

Several of the good old varieties came out strong here. Notably to mention were the Andalusians, Cornish Indians, etc. A quality class of White Laced Red Cornish were shown to advantage. These certainly look very pretty and must combine practical qualities to interest such breeders as J. Thomas Harp.

The leading American classes were

well filled with red-hot birds for all awards. In Barred Rocks Geo. W. Hilson made a killing. His winning cockerel, hen and pullet were grand good winners, as were also his first prize pen birds. Geo. M. Benham followed close with a good line of birds, while the pullets shown by Otto Brothers were choice grade birds, and only required more age to put them in the winnings.

White Rocks were up well and the winner birds of rare quality and condition. The first cock, hen, cockerel and pullet were exceptional birds, another pullet lower placed was a rich one but had evidently gone by. The Buff Rocks were well shown in good numbers, Messrs. Raymond & Lichtenwalter making nearly a sweep. The third cockerel was a sound one and with No. 399 cockerel will make beauties when fully matured. Columbian Plymouth Rocks were a large class. Here Mr. Geo. H. Sweet and Dr. C. J. Andrus ran close for honors.

The Wyandottes were very pretty classes. The first Buff cock was one as good as we have ever seen, very choice, even color and beautiful type. Second was also a hot one, good enough to win most any show and only beaten by the marvelous first winner. In the Whites it was a battle royal between rare birds shown by noted breeders. First cock shown by F. C. Lick typical and in rare condition. First cockerel and first pullet shown by C. J. Standard were at their best and were placed winners. First hen, Eadie Brothers, also a rare good one.

Columbian Wyandottes.—This was a beauty class, birds of grand type and beautifully marked were here in abun-

dance. Here again Dr. C. J. Andrus showed his mettle and quality and won splendidly, closely followed by Hill-hurst Farm.

The famous Kellerstrass hen, Peggy, and a complete display of their White Orpington attracted general attention, the \$10,000 beauty being a show feature.

The Reds came out very strong, both in quality and quantity. Both Rose and Single Comb varieties were strong and the winners well placed and of rich color.

The judges gave general satisfaction. Everybody was happy and the feature of the great Buffalo show is assured.

One of the pleasantest features was Mr. Geo. Urban, Jr.'s invitations to the judges and press representatives to visit and inspect his poultry plant. The trip was made in his automobiles. Mr. Urban lives just over the city line. He is a practical fancier and insists upon being shown. After inspecting his White Rocks and Single Comb White Leghorns, we were taken for a trip through his several greenhouses. Here was a great variety of plants, forming a rare collection. Blooms of every shape and shade were here, a fragrance filled the air that was just as refined and beautiful as was our genial host. Mr. Urban is a fancier of all that is lovely and we were told spends much of his time here among his plants. He knows them all and explained the peculiarity of each. Close by is his business office and here we found the colored illustrations of the American Poultry Journal framed decorating the wall.

From here the party in single file followed what seemed like an Indian

to all. It gives a complete description of every pen, tells of our long list of prizes and half-tones of many of our birds. Send today.

Single Comb Buff and Black Orpingtons

Madison Square, Chicago, Cleveland, Indianapolis Prize Winners

10 Grand Matings

All headed by large, vigorous broad low down males. These pens will produce the winners for the large shows another season. Are you looking for eggs from such birds? If so, try me for a setting or more this season. Send for Special Sale Circular giving half prices on eggs. Reduced prices on chix and special low prices (less than half) on every breeding bird in my yards. Over 500 Buff and Black Orpingtons, including utility, breeding and exhibition stock. Write today for special circular.

WILL H. SCHADT : : : Goshen, Indiana

trail through the dense shrubbery and trees to the "Log Cabin" in the woods. Here all sat down and were treated to a spread fit for a king. The place and its surroundings and including our worthy host combined to make this an occasion ever to be remembered. The climax came while all were enjoying their Havanas. Mr. Urban read to us several stories (as they now appear) from what was probably the first poultry book ever published, that of Burnham's, issued in 1856. Mr. Urban knew just what to read and how to read it, and justly received the plaudits of his most willing listeners. President Mesner induced us to remain over a day to attend this event and we shall always owe him a debt of gratitude.

WHAT IS THE PARTRIDGE PLYMOUTH ROCK?

An interesting Article by S. A. Noltzger, the Originator.

So many inquiries come to me asking the questions, "What is the Partridge Plymouth Rock?" "How was it produced?" "Will you please give a description of the breed?" that I feel it worth the while to furnish some information to an interested public concerning this great new fowl.

Although at the leading exhibitions of this country the past season or two the classes of this new breed have been well filled (in some cases outnumbering the other Rocks), the specimens shown being sufficient to give a good account of themselves and a correct idea of what the Partridge Rock is, yet by far the greater per cent of those really concerned in fancy poultry cannot attend the big shows and do not get their education through this medium.

It is for this great majority of the poultry raisers, who actually wish the knowledge, that this description is attempted.

The real Partridge Plymouth Rock fowl, which it has taken more than ten years of constant study and care, combined with the closest line breeding and pedigreeing, to produce, is the one which is to be considered here, and not the counterfeits, in the form of single comb sports from Partridge Wyandottes, with which we frequently come in contact.

It is the fowl of merit, combining great laying and table qualities with Rock shape, fine yellow legs, bay eyes, large size and rich color, both in male and female—the fowl that rivals in color of plumage the older Partridges and surpasses them in eye and leg color—which will reproduce itself—that has a right to ask for consideration, not a sport from which can be expected nothing certain and the offspring of which are usually culls and perfectly worthless as breeders.

The Partridge Plymouth Rock is a combination, as its name indicates, of Partridge color and Rock shape. Therefore, it should have the standard color of all the other Partridge varieties in all sections, both male and female, with the required Rock shape in every section of both sexes. This makes it comparatively easy for any person at all familiar with Partridge color and Plymouth Rock shape to combine the two and get a splendid idea of just what the requirements are for the ideal Partridge Plymouth Rock.

The advanced stage to which this new breed has been developed enables us to

beg no favors from the judges and on several occasions when I have been asked by judges and fanciers what concessions we ask I have been proud to reply that we give nor take nothing but the "Standard."

The males should be rich in color, of medium shade, too light destroys the richness, too dark is even worse. The hackles of males should be well striped as well as the saddles, the contrast in color in its richness causes the popularity of the partridge color. The females should also be of medium color, neither too dark or too light, but whatever the shade, the rich mahogany color must not be neglected.

Shafting in both males and females is one of the greatest, if not the greatest, objection in Partridge color. It appears mostly in breasts of females and hackle and saddle of males, but is frequently found in fluff of both sexes. If allowed in the breeding pens to any extent it will soon spread to other portions of the fowls. Avoid it as much as possible and always select breeders with this in view. I well recall when the Partridge Cochins was in its early stages of development that there was much difficulty along these same lines.

The true Partridge Plymouth Rock fowl was produced by systematically selecting and breeding from a cross of the (then) Indian Game male on the old type of scanty-feathered Partridge Cochins female and the Golden Wyandotte male.

Sometimes it seems to me that the road to success would have been less stony and the goal would have been reached by a shorter route had nothing but the scanty feathered Cochins been used to begin with. Then by careful selection the feathers could have been bred off and the Rock shape acquired, while the color would have been absolutely no trouble.

Today no breed can boast of more rapid strides toward perfection than this grand new fowl, which combines so many practical qualities (there being no better layers than these), their unusual beauty and evenness of type bring forth words of praise from judges and fanciers on all sides. This, in a measure, repays us for our continuous effort and sufficiently rewards us for years of care and study.

I would be pleased to contribute anything for the readers of the American Poultry Journal relative to this new fowl, which is attracting so much attention, and ask anyone who is interested to write direct to me.

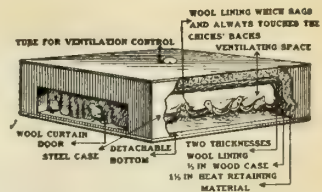

S. A. Noltzger,
North Manchester, Ind.

POULTRY NOTES.

Before setting old "Biddy" have a nest made of materials which the louse does not care to visit. Paint the wood, which makes the nest frame, with coal oil. Then place a layer of ashes, then dry earth and last clean straw. Have the hens free from any mites by giving a bath in a preparation named "Kreso," which may be purchased by the gallon at any drug store. This thoroughly eradicates them.

Kerosene the roosts thoroughly. Clean out the coops and replace the old litter with fresh straw. Refill the nest boxes and keep the houses well aired during the day.

Fireless Brooder, \$2.50

Double Wall : Metal Outside : Wool Lined
Sure, safe, economical, durable. Always ready in perfect order. Nothing to do with chicks but feed, water and keep clean, the same as your grown flock. No lamp to fill, trim, watch or explode and burn your chicks. Send for circular, mention A. P. J.

CLAIM AND PROOF

Columbian Wyandottes

ers in 6 or 7 weeks and are excellent for all table purposes. The greatest of all Winter Layers. Developing into marketable spring. The Greatest of all Winter Layers. 76 of which are firsts. 47 seconds, 27 specials, 21 thirds, 15 fourths, 9 fifths, silver cups and medals—won at the leading shows is proof of their Fancy Qualities. The above statements are claims I make for my Columbian Wyandottes, but claiming is nothing; it's Proof that counts, and Fenton's Columbian Wyandotte Farm proves conclusively that every claim is True. Fenton's Farm develops on a large and profitable scale every quality of this Grand breed. Any breed can make a show record, but it takes the best breed in the world to make a record of all qualities as the Columbian Wyandottes do at Fenton Farm. My prices are reasonable. My stock the best. If I can not please you, nobody can. If you are going to buy, buy from one who Proves Everything He Claims. **WALTER G. FENTON, Mt. Clemens, Mich., Member Mich. Poultry Assoc., State V. Pres. National C. W. Club.** Notice of May Sale in this issue.

DON'T BE DISCOURAGED

because your chicks tramp each other to death, have bowel trouble and leg weakness. Best Brooders overcome all these troubles, and are guaranteed to raise every chick, because they reproduce every condition found under the hen, and keep the chicks growing every minute. You will get our literature by return mail, just for the asking. Then you will understand why Best Brooders do what others don't do. If you will write us at once there's still time for you to **TURN FAILURE INTO SUCCESS.**

ROSELAND POULTRY FARM

CHAS. W. SWITZER, Manager and Owner South Euclid, Ohio

WHITEDIARRHOEA IS CURABLE

At the first appearance of White Diarrhoea, several years ago among our chicks, we immediately recognized that the poultry raiser was confronted with a new and the most serious blight ever known. Hundreds of our young chicks died in a few minutes, literally like flies. Thousands of poultry breeders have suffered the loss of untold thousands of dollars in the last few years from this terrible scourge. The gravity of the situation at once appealed to us. We took up the study of the disease and after long and arduous experimentation with thousands of curative agents we at last found a cure, a specific. We named it

The Champion White Diarrhoea Cure

It is the only known cure. Before placing it on the market we have given it a most thorough test. We wanted to know it would positively cure every case before announcing our great discovery. White Diarrhoea left unchecked will utterly destroy the poultry industry, will cause losses running into millions of dollars annually. Don't let your chickens die off like flies this year, don't allow your whole season's work to become a dead loss to you.

Send Today

for a package, \$1.00, trial size 50c cash; don't send stamps. With each order we send a treatise on the cure and prevention of White Diarrhoea worth many dollars to every poultry breeder. Be ready for its first appearance, have The Champion White Diarrhoea Cure on hand. Don't take any risks with White Diarrhoea raging through the entire country. If not checked White Diarrhoea will as truly ruin you as it has hundreds of other poultry breeders. Save your chicks and prepare yourself now. This is the season when the disease is most virulent and prevalent.

J. A. BENNETT & SONS' COMPANY
929 MAIN STREET, GOUVERNEUR, NEW YORK

Guaranteed by us under the Pure Food and Drugs Act of June 30, 1906

ALBIN J. THUNEMANN,

Breeder of Rose Comb Black Bantams,
Defiance, Ohio.

At the late Defiance show Mr. Thunemann won the silver cup offered for the best display in the Bantam class, all varieties competing. He also won gold and silver specials, as well as other specials and the regular premiums. His display consisted of ten birds, none of which scored less than 94½, and as high as 96½.

He has females weighing 11 to 14 ounces and males 14 to 18 ounces, so you see they are small enough.

The Rose Comb is the aristocrat of the Bantam world and, as they can be reared in very small quarters and are as profitable as some of the larger varieties, more people should take them up. Mr. Thunemann has also won at such shows as Fort Wayne, Chicago, Toledo and Tiffin, Ohio. He has stock and eggs at reasonable prices. Write him and mention American Poultry Journal.

ANOTHER U. S. GOVERNMENT ENDORSEMENT FOR PAROID ROOFING.

Uncle Sam is sending over half a million square feet of Paroid Roofing with other building supplies for the new homes of the Italian earthquake sufferers at Messina, Italy. Since 1898, when Uncle Sam covered a large warehouse at Havana, Cuba, with Paroid Roofing, it has been a U. S. government standard. After the Spanish-American war Uncle Sam sent twenty-five carloads of Paroid to the Philippines, and when he purchased the Panama canal he covered his buildings on the Isthmus with Paroid. Paroid has been just as popular with farmers and poultrymen for many years. Its reputation merits its consideration by all who may be interested in roofing.

RASPBERRIES THAT SELL AT 25c TO 35c A QUART.

It pays to be particular as to the varieties you plant, especially raspberries. It is just as easy to grow the profitable kind as it is the ordinary ones. The King Red raspberry is acknowledged by all to be the best commercial red berry grown. It is making growers more money than any other kind. The fruit is the earliest of any of the red kinds, and firm enough to carry to any market. It is hardy, prolific, fine quality and splendid for the home garden also. Experiment stations highly recommend it. A good stock of plants is being offered at very reasonable prices by W. N. Scarff, New Carlisle, Ohio. Catalog free.

Albert Anderson, Defiance, Ohio, is an old fancier and breeder of thoroughbred poultry. He is now breeding some fine Single Comb Buff Leghorns and is winning his share of the prizes wherever he shows them, receiving some very high scores under prominent judges. Mr. Anderson also breeds Barred Rock, White and Black Rose Comb Bantams, all of the same high quality. If intrusted with your order Mr. Anderson will treat you right. See his ad in this issue of American Poultry Journal.

Thousands of people are being relieved every day of nervous and sick headache by that well-known remedy, Bromo-Seltzer. There is absolutely no need of any suffering from these complaints when you can get instant relief. There is no more reliable remedy on the market. This can be obtained at any drug store, and makes a very pleasant and palatable drink. If you try it once you will recommend it to your friends.

Going to buy any eggs for hatching this spring? If you are you certainly should consider the good qualities of Partridge Wyandottes, the most handsome bird of the Wyandotte family. Mr. Will Welch, Lock Box 68, Montpelier, Ohio, is a breeder of this variety and is offering eggs from his prize matings at prices that anyone can afford to pay. Write him to-day and mention American Poultry Journal.

Imported Buff Leghorns, by J. L. Helpman, from Italy, the best strain ever brought to America. Look up his ad if you want something fine. Extra heavy layers.

Kitselman Bros. sell fence less than any one—15 cents a rod up. Get their free catalogue. See their ad in this paper.

We Sweep The Boards Again

FIRST PRIZE COCK AND FIRST AND SECOND PRIZE HENS AT CHICAGO SHOW 1908.
PINE TOP POULTRY FARM, OWNER AND BREEDER, HARTWOOD N.Y.

Our Success at the Great Poultry Show at Philadelphia, Pa., January, 1909, Surpasses Even Our Wonderful Record Made at Chicago, Ill., January, 1908

Exhibiting but twenty-five (25) birds, thirteen (13) Barred Rocks and twelve (12) S. C. W. Leghorns. In Single Comb White Leghorns we won all 5 blue ribbons offered winning every first, also second hen, fifth cockerel, every special offered in the Single Comb White Leghorn class, including the association cup for best cock, hen, cockerel and pullet, another silver cup for best pullet, silver medal from A. P. A. for best cockerel, silver cup for champion male of all the Leghorn classes, presented by the Item Publishing Co., publishers of the Poultry Item.

In Barred Plymouth Rocks we won practically all the prizes and specials open to non-resident breeders, including a solid silver cup presented by Mr. Edward L. Welch for best cock, hen, cockerel and pullet. Silver cup for best female, silver medal from A. P. A. for champion cockerel, being located in first pen, specials for best shaped male, best colored male and female and many others, getting two of the coveted blues with first pen and first hen, also second place in cocks, third and fifth places in cockerels, and second and fifth places in pullets.

BARRED MINORCAS

FIRST PRIZE MADISON SQUARE GARDEN, N. Y., 1909. FIRST PRIZE CRYSTAL PALACE, LONDON, NOV., 1908. In order to spread the beautiful Barred Minorcas all over the country, I have decided to reduce the price for hatching eggs after May 15th as follows: Eggs selected from three best pens, including the Madison Square Garden first prize winners, \$9 per dozen, and from three pens which were awarded second prize, \$6 per dozen. Every fowl in these pens is selected and comes up to the standard; in short, these are wonders. A few cockerels, perfect in every way and finest shape, for \$25 and up, and young chicks from four to six weeks old for \$3 each. Illustrated price list, 4 cents in stamps.

AUGUST SCHWARZ - SUNOL GLEN, CALIF.

Ivanhoe, valued at \$1,000

AGAIN at INDIANAPOLIS

February, 1909. The quality show of America, Condit's White Rocks won every first, three seconds and four third prizes, and the grand challenge \$25.00 Silver Cup for the best exhibit of quality, all breeds and varieties competing. This, with my record of every first, two seconds and two thirds at the Great Indiana State Fair, 1908, and four firsts and five seconds at Marion, Ohio, December, 1907, and every first and color special at Indianapolis, February, 1907, stamps the quality of the Condit strain. Eggs from my choicest matings. Every pen headed by prize winner male. \$5.00 and \$10.00 per setting. Send for catalogue.

P. B. CONDIT

2138 No. CAPITOL AVE. INDIANAPOLIS, IND.

F. D. SUTTON, YOUNGSTOWN, OHIO,

Breeder of High Class White Wyandottes.

Mr. Sutton has some exceptionally fine specimens of this popular variety. Several specimens scoring up to 95½ and 96 points. He won a goodly share of the ribbons at Youngstown, Ohio, in the keenest kind of competition, 142 birds in the class. Every bird in Mr. Sutton's pens has been carefully selected and passed by the critical eyes not only of Mr. Sutton but also by Judge Zimmer. They had to measure up well toward perfection or they would have been thrown out as unworthy. Mr. Sutton reports his eggs as extremely fertile, and he has reduced the price on his eggs, as he has already hatched all the chicks he can raise. This is your opportunity and you should take advantage of it. If you raise White Wyandottes write him at once. Always mention American Poultry Journal.

CHAS. McCLAVE, NEW LONDON, OHIO,

Proprietor of Linwood Poultry Yards, Won 2,539 Prizes at Twenty-one Shows.

Mr. McClave is probably the oldest and best known breeder and judge of poultry in America today. He breeds nearly all the standard varieties of poultry on which he wins thousands of prizes, and when it comes to turkeys and water fowls he simply cleans the platter wherever he shows. His record of 2,539 prizes in twenty-one shows certainly has never been equaled by any breeder. Silver cups, gold and silver specials and prizes galore always fall to his lot. No matter what you want, Charley has it. Write him and mention the American Poultry Journal.

A READY ROOFING THAT NEEDS NO PAINTING.

Farmers all over the country are beginning to wake up to the fact that it is no longer necessary to use ready roofings that require constant painting to keep them tight. The new style of ready roofings with a mineral surface, of which Amatite Roofing is the best known, are becoming very popular and have proven a great success.

The mineral surface of Amatite needs no painting or coating whatever, and after the roofing is laid there is no further excuse for trouble.

A sample of Amatite can be secured by addressing the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Pittsburg, Boston, Philadelphia, Minneapolis, St. Louis, Kansas City, New Orleans and Cincinnati.

PETER S. HURT, THORNTOWN, IND.,

S. C. Buff Leghorn Specialist.

The man who advertises and gives "A Square Deal to All Advertisers" sends us his mating list, testimonials, etc. His winnings of silver cups, sweepstakes, gold and silver specials, club ribbons, etc., etc., prove he has the quality, as Boston, Indianapolis, Hagerstown, Syracuse, Chicago, Columbus, Sedalia, Danville and many other shows too numerous to mention are on the list. Hurt's Buffs have won at many of these large shows in hot classes for several years, which proves he can breed this high class quality year after year. If you want assured quality of Buff Leghorns Hurt has it. Send for his circular. You will find his prices reasonable. Mention American Poultry Journal.

H. BURKHOLDER, BARRED ROCK SPECIALIST, CLYDE, OHIO,

Reports a young cockerel, that was a very promising bird when the writer saw him, some sixty days ago. Has developed into an extremely fine specimen and is now the sire of 100 lively chicks. To him Mr. Burkholder has mated sound, grand cockerel bred females, and this mating should produce some show specimens. Another pen is headed by a fine cock that won first at Tiffin, Ohio, 1908. Has several other pens of the same high class stock. Mr. Burkholder will sell eggs at reduced prices after June 1. You can reach him by addressing H. Burkholder, Clyde, Ohio. We trust you will mention the American Poultry Journal.

Goshen Poultry Yards, Goshen, Indiana

C. E. GREENAWALT, HICKSVILLE, OHIO,

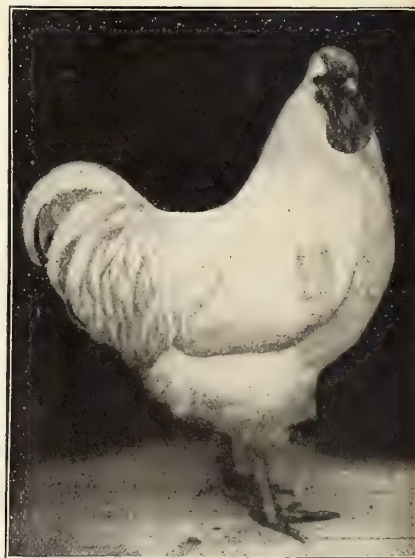

Breeder of S. C. Buff and Black Orpingtons,

Writes he has birds sired by the champion cock at New York last year, and also has blood from the Chicago winners in his matings. His stock will be found just as represented and he will make good any dissatisfaction in either stock or eggs purchased of him. This is a broad and liberal offer and should induce you to give Mr. Greenawalt a trial order. He further says he would rather have a few "satisfied customers" than a large number and some not satisfied, as he desires to lay the foundation for a large business later on; therefore he is making his prices very low.

You are invited to come and see his stock at any time. It is evident Mr. Greenawalt will treat you right and we suggest when in need of Buff or Black Orpingtons you write him and mention the American Poultry Journal in doing so.

WM. TYLER, BOWLING GREEN, OHIO,

Mr. Tyler has made a specialty of high-class Buff Rocks for the past ten years. He started with the best money could buy

White Wyandotte cock heading one of the exhibition breeding pens of Elmer Gimlin, Taylorville, Ill. This cock has been a first prize winner at the Madison Square Garden, New York, the highest honors in the world.

direct from Madison Square Garden winners, and having been a breeder of fancy poultry for some eight years before that he knew what he was about. Mating right, he has produced "quality" from the very start and has been able to improve a little every year. For the past three years he has won a handsome silver cup each year. In 1907 he won the Ohio state cup and again in '08 he won another Ohio state cup and in '09 he won the Central District cup. All are handsome cups and much coveted prizes. These and many other regular and special prizes, including gold specials, have been carried home by Mr. Tyler because of the superior quality of his Buff Rocks.

He has no "special" pens for his own use, but you get the same eggs he hatches these winners from himself. His address is William Tyler, Route 2, Bowling Green, Ohio. Mention American Poultry Journal in writing him.

M. J. Cory, Buff Rock Specialist, Springfield, Mass. Mr. Cory calls his strain the "Goldenglow Strain" and he has won state and district cups, as well as Shape and many other specials at the Boston show during the past two years. His cuts show fine shaped specimens and he has a hen scoring ninety-five and one-half points. Mr. Cory certainly has good quality and his circular is free for the asking. You should address M. J. Cory, 900 Summer Ave., Springfield, Mass. Mention the American Poultry Journal.

WHY IS IT?

When You Think Of

Big Profits In Poultry

Then You Think Of

LAKEWOOD FARM

IT IS

OUR "DUAL PURPOSE LEGHORN"
THE EGG AND BROILER KIND

Because:- LAKEWOOD FARM is both BIG and PROFITABLE

Because:- LAKEWOOD FARM has grown from a small beginning to the proportions of a great commercial success through profits from the Lakewood Farm Strain of Single Comb White Leghorns

**Because:- LAKEWOOD FARM is WORLD RENOWNED as
The Home Of "The Hen of Destiny"
"The BIG KIND---BRED To LAY"**

The Brooding Problem Solved

After years of experimenting and study, we offer to the poultry world a line of brooding devices unequalled. Brooders for everyone—whether you raise chicks by the dozen or by the thousands. Brooders—out-door, in-door and colony house. The Mother Hoyer alone for your home-made brooder or brooder houses. Get in touch with us. We can help you.

BRUNER MFG. CO., 601 S. St. Paul St., Indianapolis, Ind.

THE BRUNER OUT-DOOR BROODER

ANDY SMITH, TOLEDO, OHIO,

Breeder of White Leghorns, White Wyandottes, S. C. B. Minorcas, S. C. Red, White Cochins Bantams and Pekin Ducks,

Inform us his S. C. B. Minorca pen is headed by the first prize cockerel at the late Toledo show; also that he has purchased Wisenburger Bros. White Cochins Bantams. These birds never have been defeated wherever shown.

Another purchase is the flock of Pekin Ducks formerly owned by Mr. Barnes, also undefeated winners.

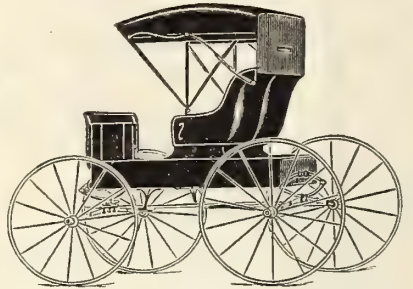

Mr. Smith is very strong in S. C. White Leghorns and has many winners in this variety in his pens. He has spared no pains or expense in securing high class stock, as he is breeding for "show quality," not forgetting the utility side. You should look up his ad in this issue, and in writing him please mention the American Poultry Journal.

BIG NEW BUGGY CATALOG JUST OUT.

One of the very finest books of its kind that we have ever seen is the Elkhart Carriage & Harness Mfg. Co.'s new catalog, which shows all their newest and latest designs. For the benefit of our many interested readers we print here a picture of their famous "No. 1000" buggy.

"No. 1000" is equipped with true sweep bike axles and twin auto seat, which, as the picture shows, is divided. However, the upholstery is made all in one part as in the ordinary seat. This buggy is said to be an unusually easy-riding vehicle and is built perfectly. Regular buggy style gear, instead of the bike gear here illustrated, may be had by those who prefer it.

"No. 1000" is made with steel tires and 7/8 or 1 inch solid rubber tires. Sarven

Patent or Half Dodge Spoke wheels can be had on this buggy, too. In fact, several changes may be made to suit the fancy of the user. Many other desirable styles are shown in the big Elkhart free Catalog and all are good. Before investing in any kind of a buggy we advise our readers to send a postal to the Elkhart Carriage and Harness Mfg. Co., Elkhart, Ind. They sell direct to buggy users, cutting out all dealers' profits, and their prices are as low as any we know of on good vehicles. Get your name on their mailing list at once so as to be in on some of the good bargains they are now offering.

Ira C. Keller, the Wyandotte man, Prospect, Ohio. Mr. Keller is a well-known Wyandotte specialist, having bred all varieties of Wyandottes for the last sixteen years, winning many of the prizes at all our large shows. Mr. Keller writes his matings this year are the finest he ever had and contain most of his winners at New York, Chicago, Columbus, Cleveland, Cincinnati and the World's Fair. Fertility is extra good with him, as he got 29 chicks from 30 eggs and the average will be about 12 chicks from 15 eggs. Mr. Keller's prices are very low for such quality as he offers you, being only \$3 per setting, two for \$5 or \$18 a hundred. Mr. Keller being an old hand at the business, having won so many premiums, fertility running so high, and his prices so reasonable, are all points that should appeal to you. His circular is free, send for it and mention American Poultry Journal.

Willard J. Thorniley, R. R. 1, Marietta, Ohio, breeder of Anconas, issues a booklet describing Anconas in general and his in particular.

PUTTING HIS ROOFING ON RIGHT.

Farmer Now Does the Job Himself.

Many of our readers claim that the only way to put on a roof is to do it yourself and we believe their experience might well be followed by everybody. Since the passing of the expensive shingle roof and the introduction of the more practical prepared roofings, it is not much of a task to roof a house, barn or shed. It is just about as simple as laying carpet or matting.

If you have any buildings on your place that have old or leaky roofs, the thing to do is to write at once to some reputable manufacturer for his estimates, samples and prices on prepared roofing. We understand that the Breese Bros. Company, who make the well known "BB" Roofing, make a specialty of answering all such inquiries and furnish everything needed in case the writer decides to use "BB" Roofing. They tell just how to lay gutters, flashings, pitched roofs, flat roofs, and how to measure your buildings, so as not to waste any roofing material. Each roll of BB Roofing contains cement, special nails and all directions for a simple, neat job.

Since the Breese Bros. Co. put the strongest kind of a guarantee behind "BB" Roofing, people everywhere are using it. It is known to be of very good quality and possesses great resisting quality from fire, weather and chemicals. Unless you have already noted the published prices on "BB" Roofing you will be very much surprised to know that they are the lowest figures ever quoted on good roofing. An immense output and a direct-to-the-user plan of selling explains the unusual prices.

Before you make any deal, to roof your buildings or sheds, suppose you drop a line to the Breese Bros. Co. (Roofing Dept. 68), Cincinnati, Ohio, and get the details of their proposition. This doesn't cost you anything but a penny postal and it may save you both money and trouble in getting the right kind of a roof. Be sure to write for free samples of their roofing to test, and for their special offer schedule.

And, by the way, their prices include not only all incidental material, but also the freight charges which they themselves pay, a fact which one can by no means afford to overlook.

Write to Breese Bros. about roofing at once and we assure you your questions will be promptly and politely answered.

Edward Beesley & Son, Thorntown, Ind., breeders of White Rocks, report they have several fine pens mated for eggs containing their prize winners for the past year, which consisted of the following: Indianapolis,

write for them. Always mention the American Poultry Journal.

We desire to call your attention to the change of ad of W. W. Kulp, Pottstown, Pa., a well known breeder of Rose and Single Comb White and Brown Leghorns, Barred Rock, Light Brahmas and Pekin Ducks. Mr. Kulp's birds are winners at New York and other leading shows and each variety is "Down to date," having received his close attention and Mr. Kulp is satisfied with nothing short of the best. Look up his ad in this issue and mention

Brooder House on the poultry farm of F. J. Banta, Lima, Ohio. Here is where Mr. Banta raises his Orpingtons.

second cockerel, fourth cock on three entries in hot competition; at Darlington, first cock, first cockerel, first pullet, third hen, first pen, on six entries; at Advance, first cockerel, first cock, first hen, second and third pullet, first pen, all club ribbons and silver cup for best White Rock cock in the show. These prizes were all won last winter, and these birds and a lot of 1908 prize winners are all in their breeding yards and mated to produce more winners. Their prices are all reasonable. Better

the American Poultry Journal in writing him.

O. H. and E. R. Schoff, Campville, Tioga county, N. Y., and South Orange, N. J., breed Black Minorcas and White Rocks. They announce that they have purchased the entire stock of S. C. Black Minorcas of the Maplehurst Farms and intend carrying on this strain in the same efficient manner that he has during the past twenty-three years.

THE
SEAL

CYPHERS POULTRY FOODS

Quality Protected By Sealed Bags

If you buy a bag of Cyphers Poultry Foods, look for the unbroken seal and be sure you get it. If you buy in smaller quantities, ask to see the seal on the bag from which the food is taken. Thereby you are protected and sure to get "Cyphers." We guarantee our Poultry Foods to be the best value on the market—scientifically balanced for best results and we want you to get it just as it leaves our Kansas City Mill. That's why it all goes out in sealed bags. When you have satisfied yourself that you have the real goods, compare it with any other food on the market, at any price, and see the difference. Cyphers Foods contain the best grain—always. It's always the same. It is pure food. Cyphers Foods contain

No Weed Seeds to Breed Weeds—No Grit to Add Weight

The Largest Poultry Food Mill in the World is our Kansas City Mill where we manufacture nothing but poultry foods, including alfalfa products—no breakfast foods nor ordinary stock foods; therefore our customers receive absolutely sound, cleanly cut, dust-free grains; not by-products, waste material or sweepings, that remain after putting the better parts of the grains into other foods. Every sack contains a 16-page booklet, "Foods and Feeding," telling now to feed.

Cyphers Chick Food { Health-Giving Quick Growth }

Produces Flesh, Feathers, Bone and Muscle. It aids in preventing Indigestion and Diarrhoea by reason of its well-balanced variety. A pound lost in a young chick's growth can never be regained—once lost always absent—and your chance for winners or early layers has gone.

The Best Foods Produce the Best Fowls—For Show, for Market and for Laying. Therefore it is wise to buy the best. The following is our list of balanced Poultry Foods—all superior and as low priced as we can make them.

CYPHERS CHICK FOOD
CYPHERS SCRATCHING FOOD
CYPHERS DEVELOPING FOOD

CYPHERS FORCING FOOD
CYPHERS LAYING FOOD
CYPHERS PIGEON FOOD

CYPHERS SHORT-CUT ALFALFA
CYPHERS SHREDDED ALFALFA
CYPHERS MEALED ALFALFA

Our Free 212-Page Catalog gives you full information about our Kansas City Mill and tells about the composition of all the above Poultry Foods. It contains photographs of superior, standard-bred fowls; prize winners at America's big shows; over seventy pictures of the World's Biggest Poultry and Duck Farms and Experiment Stations; tells about our new Fire-Proofed Insurable Incubators; our Electric Hatchers and our Mammoth Incubators. How often we hear the remark "Kellerstrass" White Orpingtons

are the highest priced chickens in the world

Read the following testimonials—we have thousands of them on file in our office—then send for our Catalogue; read it through and you will know why "Kellerstrass" BIG EGG LAYERS bring the highest prices of any chickens in the world

FIFTEEN CHICKS FROM FIFTEEN EGGS.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I write this to let you know the wonderful hatch I had from the setting of eggs I bought from you on the

of. I thank you for your honest dealing, and will want eggs from better mating the next time I order.

Yours truly,

LEWIS B. TRUSSELL,
Crothers, Pa.

STILL HAVE TWENTY-ONE LEFT.

Mr. Kellerstrass,
Kansas City, Mo.

Dear Sir:—As I got two settings of eggs from you this spring I thought I would let you know about them. Out of one setting I had ELEVEN and out of the other TWELVE little chicks. It is about two months since they were hatched and I STILL HAVE TWENTY-ONE LEFT. One of the others was killed by accident. I think that was good for shipping so far. I am well pleased with them. I hope I can raise the rest now. Respectfully yours,

FRANK BAYER,
Dodge, Neb., 6-11-08.

325 miles in the first place, and they were moved three different times after incubation began on account of difficulty in getting hens to properly attend them. The eggs seem to have remarkable vitality as well as fertility.

Will you have any eggs at reduced prices after hatching season is over?

Very truly,

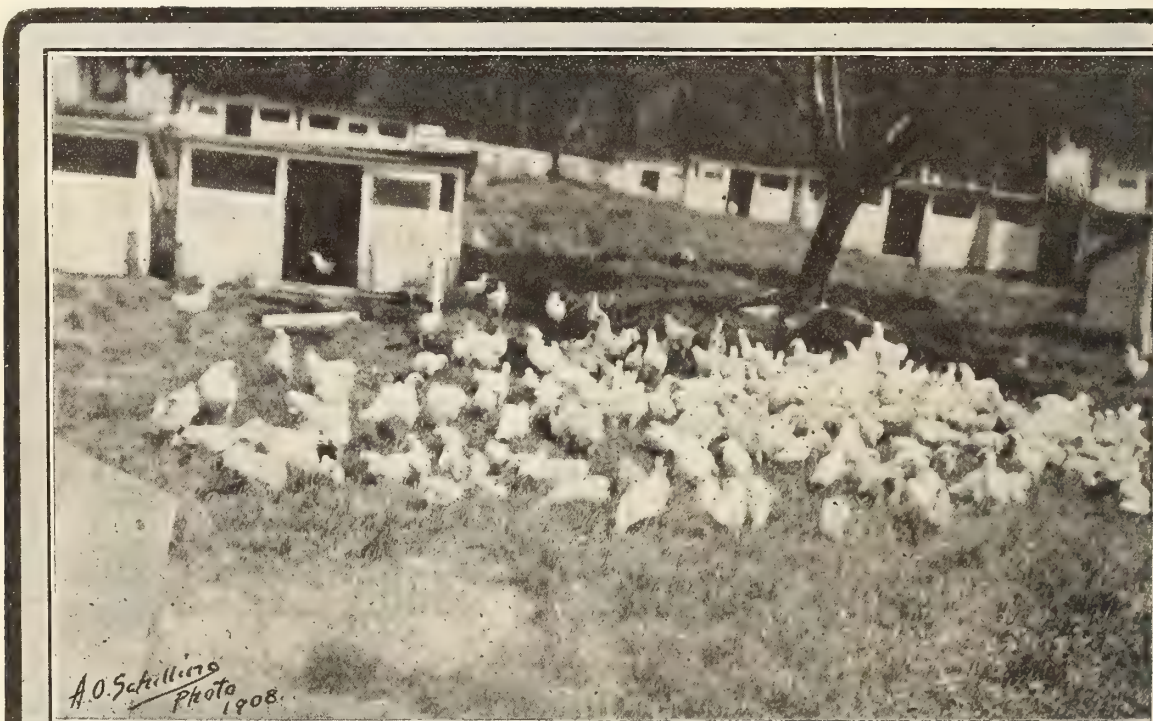

JAS. E. CUMMINS,
Kenwood Park, Iowa, 5-18-08.

FOURTEEN AND TWELVE HATCHED.

Mr. Ernest Kellerstrass,

Kansas City, Mo.

Dear Sir:—I have been intending to write to you telling you what good luck I had with the two settings of eggs I bought from you, but I have been very busy and sick on the side. I have FOURTEEN CRYSTAL WHITE ORPINGTONS out of the first setting and TWELVE OUT OF THE SECOND. I think that is just fine. THE CHICKS ARE JUST AS LIVELY AND STRONG AS ANY I

VIEW ON THE KELLERSTRASS FARM KANSAS CITY MISSOURI

12th day of April last. Well, sir, I GOT FIFTEEN CHICKS OUT OF THE FIFTEEN EGGS and have fourteen living today, the 29th, and they are fine.

I have bought lots of eggs from the different people, but I must say that you are THE MOST HONEST IN ALL THE LOT.

HARRY ARMSTRONG,
Mystic, Iowa, 5-29-08.

TWELVE HATCHED.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—I received the eggs I ordered from you Saturday, March 28th, and set them Monday, the 30th, and got a hatching of TWELVE LITTLE CHICKENS FROM FOURTEEN EGGS, one of the eggs being cracked; it had been done in the nest, as they showed no signs of damage in any way. THE CHICKS ARE VERY SPRY AND NICE, and I am well pleased with the looks of them, and I am sure I will have the "WHITEST" chickens in this part of the country, as there are no Crystal White Orpingtons in this part of the country that I know

FOURTEEN OUT OF FIFTEEN ON TIME.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—Last evening, "on time," I found FOURTEEN (14) CHICKS FROM THE FIFTEEN EGGS PURCHASED FROM YOU. The fifteenth egg was not fertile, otherwise would have had fifteen White Orpingtons. Yours truly,

D. J. HUTCHINSON,
South Pasadena, Cal., June 15th, 1908.

SHIPPED 325 MILES—MOVED THREE TIMES—HATCHED FOURTEEN OUT OF FIFTEEN.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I write to inform you that I got FOURTEEN LIVELY WHITE ORPINGTONS FROM THE FIFTEEN EGGS I ordered from you on April 16th. All are lively and doing finely. They began hatching last Thursday. I consider the hatch remarkable, as they were shipped

EVER SAW, and no doubt will make me a flock of good No. 1 birds.

I wish to thank you for your kindness and courtesies, and wish you the continued success of selling fine chickens.

Yours very respectfully,

GUY COLEMAN,
Platte City, Mo., 5-22-08.

FOURTEEN HATCHED; DOING FINE.

Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—I would have had FOURTEEN of your Crystal White Orpingtons if the rats had not killed one of them. THEY ARE DOING FINE. I hope I can raise them. How do you sell eggs in August and September? Yours truly,

MRS. GEO. KIRCHNER,
Donnellson, Iowa, 6-14-08.

ELEVEN FINE STRONG CHICKS.

Mr. Ernest Kellerstrass,
Kansas City, Mo.

Dear Sir:—Feel it my duty to report

the result. On May 12th I had a hatch of ELEVEN (11) STRONG CHICKS from your eggs, and they are all doing splendidly so far.

Yours respectfully,
ROBERT O. JONES.
Lannon, Wis., 5-28-08.

HATCHED TWENTY-FOUR.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—I make the following report: From yard 30, two settings, thirty eggs, all in good condition, received March 23d, 1908, set March 24th, under one black hen and one red hen. The black hen broke one egg in nest and HATCHED FOURTEEN CHICKS OUT OF THE FOURTEEN EGGS. The red hen HATCHED TWELVE CHICKS OUT OF HER FIFTEEN EGGS, but another hen killed two and one died in the nest; one egg was infertile and the other had a dead chick in it. So we took off twenty-four nice, fine chicks and have them all yet. They are all we expected, "just

you that the last setting of eggs you sent me I set under a hen and she hatched TWELVE CHICKS. Every fertile egg hatched. THEY ARE ONE WEEK OLD TODAY AND ALL STRONG AND HEARTY. THEY ARE A NICE FLOCK FOR ONE HEN AND ARE ADMIRABLE BY EVERY ONE WHO HAS SEEN THEM. Yours truly,

M. E. JORDAN.
Lyons, Ia., 7-28-08.

TWELVE HEALTHY, STRONG CHICKENS.

Mr. E. Kellerstrass,
Kansas City, Mo.

Dear Sir:—I have received one setting of eggs and got TWELVE HEALTHY AND STRONG CHICKENS out of the fourteen eggs; one egg was broken when we received them. The little chicks are now about ten days old, and every one is growing and as healthy as I have ever seen any.

Yours truly,
DR. A. W. GRUEBBEL.
Concordia, Mo., 5-26-08.

hatched, or had been spoiled in shipping, for they had not started to hatch, so I think the old hen did her part.

Yours for Orpingtons
R. C. BETZER.
Huckman, Neb., 5-28-08.

HATCHED TWELVE FINE CHICKENS.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—HATCHED TWELVE FINE CHICKENS out of setting of eggs from you and they are beauties; am going to try to raise all of them if care will do it.

Yours truly,
W. F. GERHART.
Pocahontas, Iowa, 5-29-08.

HATCHED TWELVE CHICKENS.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—About the last of April I received a setting of Crystal White

U. S. A. WHERE THE CRYSTAL WHITE ORPINGTONS WERE ORIGINATED

splendid," and we are greatly pleased.

Yours truly,
A. ODELL.
Pond Creek, Okla., 6-1-08.

TWELVE CHICKS, AS FINE AS CAN BE.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—Received the Orpington eggs in due time and set them under two hens. From the setting of fifteen we got TWELVE LITTLE CHICKS AS FINE AS CAN BE, all in good condition, and we are well pleased with the hatch.

Thanking you for past favors, I remain,
Yours truly,
R. D. HALL.
Lyons, Kans., 6-9-08.

TWELVE CHICKS HATCHED.

Ernest Kellerstrass, Esq.,
Kansas City, Mo.

Dear Sir:—I take pleasure in informing

TWELVE FINE CHICKS HATCHED.

Kellerstrass Farm,
Kansas City, Mo.

Gentlemen:—In reference to the eggs which I got from you on the 31st day of March and set the same day, they were nearly all hatched the 20th day of April; that is, a day before their time to hatch. THERE WERE TWELVE FINE CHICKS HATCHED AND I AM WELL PLEASED WITH THE HATCH. I think they will make some fine chicks. The little chicks are doing fine.

Yours truly,
O. E. HOUSE.
Wagoner, Okla., 4-26-08.

GOT ELEVEN CHICKS.

Mr. Kellerstrass,
Kansas City, Mo.

Dear Sir:—Would say that I received my setting of eggs in good shape and took pains to pick out one of my best hens to set them under. I made her a nest in front yard; she set fine; never broke an egg, but I got ELEVEN CHICKS. The other four eggs were not

Orpington eggs. THEY HATCHED US TWELVE CHICKENS; three eggs were bad. THE CHICKS SEEM TO BE HEALTHY.

Respectfully,
BURTON FLEMING.
Huntsville, Mo., 5-23-08.

ELEVEN NICE CHICKS.

Ernest Kellerstrass,

My Dear Sir:—Your eggs came all right and I have hatched ELEVEN NICE CHICKS but the bad weather killed five of them. Do they feather out rapidly or not? Can I expect any show birds from what I raise or will it be all unlikely for me to get any? What points do they have to carry them to 93 or 94 score? If not taxing you too much, give me the points, as I am a new beginner with the Orpingtons.

Yours respectfully,
B. G. LEE.
Cochran, Ga., 5-17-08.

You Pay for the Sand On Roofings

When you are offered a ready roofing which is coated with sand, mica, or pebbles, you can make up your mind that you are paying *roofing prices* for the coating.

For such coating does not help the roof. It is merely a "talking point" to make the roof seem different from what it really is.

Such coating, in fact, is a detriment. For it washes off after a few rains, leaving a roughened surface on the roofing, and choking up gutters and drain pipes.

The reason why coated roofings are offered you is because there are 300 substitutes for the genuine Ruberoid, all looking much the same.

By adding sand to the roofing it is made to appear different—that is all. And you pay for a mere selling feature, when you ought to be getting roofing value.

The First Ready Roofing

Ruberoid roofing has never been coated. It is the original ready roofing by several years.

The secret of its wonderful properties lies in the Ruberoid gum which we use.

This gum is our exclusive product. No other maker can use it. It is this gum which makes Ruberoid heat proof, cold proof, snow proof, rain proof. Resistant to acids, gases and fumes.

RUBEROID

(REGISTERED IN U. S. PATENT OFFICE)

Be sure to look for this registered trademark which is stamped every four feet on the under side of all genuine Ruberoid. This is your protection against substitutes which many dealers brazenly sell as Ruberoid. Ruberoid is usually sold by but one dealer in a town. We will tell you the name of your Ruberoid dealer when you send for our free book.

It is this Ruberoid gum which makes Ruberoid so good a fire resistant. You can throw burning coals on a roof of Ruberoid without danger of setting fire either to the roofing, or to the timbers underneath.

It is this exclusive Ruberoid gum which makes Ruberoid flexible enough to stand the strains of twisting and bending which every roof must bear.

Seventeen Years of Service

The first Ruberoid roofs ever laid—seventeen years ago—are still flexible, still weatherproof, due to the life of this wonderful gum which is used in no roofing but Ruberoid.

Ruberoid roofing is suitable for any building—from a woodshed to a large factory or public building.

It also comes in attractive colors—Red, Green, Brown—for use on fine homes.

But before deciding on any roofing, for any purpose, send for our free book, "All About Roofings."

This book tells what we have learned in twenty years of roofing tests. It gives the advantages and the disadvantages of shingles, tin, tar, iron and ready roofings.

It is a gold mine of practical information.

To get this valuable book, simply address Department 77A The Standard Paint Company, 100 William Street, New York.

THE STANDARD PAINT COMPANY, Bound Brook, N. J.

C. W. ZIMMER'S VISIT TO THE WHITE OAK POULTRY FARM, F. J. BANTA, PROP., LIMA, OHIO.

Recently while in Lima, Ohio, we had the pleasure of calling on Mr. F. J. Banta, who drove us out to his poultry farms. The first farm we visited is located at stop 4 on the Ft. Wayne division of the Ohio Electric Line, one-half mile outside the corporation, and consists of twenty acres, having a nice slope to the south. Here we found a brooder house 18x100 feet, heated with a Candee hot water system. An incubator cellar located at one end of the brooder house which has a capacity of 4,000 chicks per month, and at the time of our visit, in March, we found about 1,000 chicks which will be ready for early fall shows. We found ten colony houses filled with Orpingtons, Whites and Blacks, all stock having good quality, being purchased direct from Cook, for some of which long prices were paid. Mr. Banta sent an expert poultryman down to Scotch Plains, N. J., to personally select the birds. Each of the ten pens has large glass runs 75x125 feet, all fenced in good shape. Some forty colony houses distributed over the rest of the farm will be used to accommodate the young stock after it leaves the brooder house.

Mr. Banta was remodeling the dwelling and intending to live there himself, that he may be able to look after everything

First prize White Plymouth Rock cockerel and color special at New York, 1908-9. Bred and owned by W. R. Graves, Southboro, Mass.

Send Us \$1.00 and We'll Ship You a Gallon of Red Label Lice Killer and a Star Pump on Ten Days' Trial

The Star Force and Spraying Pump is made of solid brass—double-acting piston. Agitator at bottom to handle mineral paint, whitewash, etc. Use it for spraying trees, flowers and lawns. Spray your Cattle, Hogs or Poultry Houses with it. Handy for washing autos, buggies or windows. Non-clogging spraying device. No valves to leak. No washers to wear out.

Kills Lice Over Night Don't handle the birds—simply paint the roosts and dropping boards with Red Label Lice Killer—full strength—fumes kill the vermin. Next day spray inside of poultry house with mixture "Red Label" 1 part, water 20 parts, and all lice and mites that escaped the fumes will be killed, and house disinfected. The easiest, cheapest and surest way to kill lice and mites.

Send \$1.00 (draft or money order) for a gallon of Red Label Lice Killer and a Star Pump. Express prepaid anywhere east of the Rockies (except Arizona, New England States, New Mexico and South Texas). Use ten days. If satisfactory, remit \$4.00, the regular price of the pump. If not O. K. in every way, return the pump at our expense. This is an introductory offer.

Price 4 cents in stamps. Just what You need. Circulars free.

W. W. Whiton, the expert poultry judge of Wakeman, Ohio, says: "The 100 R. C. Brown Leghorn one-day-old chicks arrived in good order. Followed your directions as to feed and raised 87 to maturity, which was very pleasing to us; 45 of them being pullets."

OHIO HATCHERY & MFG. CO.,

Box 30

Bellevue, Ohio

personally. All buildings, fences, etc., are to be painted white, which will certainly make a pretty sight and one of the most up-to-date poultry plants the writer has visited.

After a careful inspection of this farm we drove over to Mr. Banta's other farm, an 80-acre place, where his head poultryman lives. Here also will be located colony houses in the orchard and along a creek which flows through the woods near the house. Everything is "ideal" for a large and successful poultry plant, and Mr. Banta has used good judgment in all things. At this farm the grain will be raised to feed the birds. Mr. Banta insists on everything being as clean as a pin, therefore the stock was in a vigorous, healthy condition.

Mr. Banta is now offering all his eggs at half price. If you have been thinking of getting Orpington eggs, you had better look up his ad in this issue of American Poultry Journal.

Editor American Poultry Journal:

Have recently been visiting in Massachusetts and chanced to call at the poultry farm of W. R. Graves in Southboro. He has a very suitable location, with good southern exposure and well protected from the north wind, and in the interest of White Rock breeders I will say he has the best lot of White Rocks I have ever been favored to see. His White Wyandottes are of the same high quality. With such grand birds in Mr. Graves' breeding yards and in consideration of his ability to breed good birds, it will be a hard combination to beat, north or south.

W. J. McCaffrey.

IMPROVEMENT IN THE BROODER.

It is very encouraging to notice that this season the brooder is receiving the long needed attention necessary to bring it up to the efficiency of the very practical and profitable standard of the modern high grade incubator of today. This is absolutely necessary in the evolution of the poultry industry to insure its certain and regular advance. In fact, it is necessary to equalize the great difference in results that have been obtained from the incubator and brooder to make a real step toward the results which prove progress. It is a known fact that the brooder has caused more failures in the poultry industry than all other troubles combined, as it has been very easy to hatch the eggs, but mighty hard to raise a profitable number of the chicks.

Judging from reports of the results attained, Best Brooders as advertised on another page are most remarkable brooders. They are a safe and sane combination of the heated and fireless brooder, embodying the contact heat theory which gives such satisfaction to the chicks that the tendency toward huddling and crowding is entirely eliminated. In fact, the brooder is so efficient that with proper feeding the poultryman may depend on raising every vigorous chick hatched and some of the weaker ones too.

In every point of construction the convenience of the operator is considered. As it is self contained the cleaning and sanitation is so quick and easy that the heretofore irksome task is a real pleasure. Another important feature is that being constructed entirely of metal, it is absolutely fireproof and safe to put in any building.

With its phenomenal efficiency, convenience and safety, they should enable all poultrymen who have had trouble with the brooder to get the results that have been so hard to obtain. We do not hesitate to recommend their trial to all our readers, especially as the brooder is sold and guaranteed in such a way that every purchaser is the sole judge of its merits, and has the control of the purchase price in his own hands until he is entirely satisfied. The manufacturers

will be glad to mail their literature promptly to all who write for it, and while it is still not too late to hatch the chicks, every poultryman will do well to

H. W. Myers, Tacoma, Wash., Importer and breeder of pheasants, has eight varieties of pheasants and one of the largest aeries on the coast. If you breed

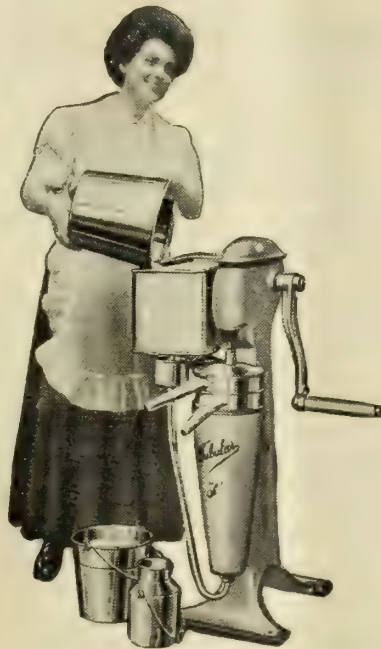

Single Comb Rhode Island Reds, winning third and fourth cockerel, Utica, December, 1908. Owned, bred and exhibited by Dr. M. Lee-Smith, Watertown, N. Y.

get their circular even if he does not buy, as their new thought is well worth considering.

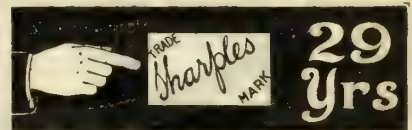

pheasants you should have his catalogue, as it gives valuable pointers of feeding and caring for young and old pheasants.

How the Farmers Voted

Tubular supply cans are low, steady, and need not be removed to take the machine apart. A plumb bob is attached to the back of our 1909 Tubular "A" for quickly leveling the machine.

We recently offered a beautiful calendar to **every** farmer sending us his name and address and telling us how many cows he had and **what make of cream separator he owned.** We received many thousand replies. **Every one of these farmers told us the name of his separator.** It was just as though the farmers had voted to decide which cream separator is best.

Almost Half Say Tubular

More than 41 per cent.—**almost one-half**—of all the separators owned by these many thousand farmers are Tubular separators. There are **more than twice as many Tubulars** as the three leading "Bucket bowl" separator **combined.** This absolutely proves that **farmers like Sharples Tubulars best.**

This is the farmers' verdict. Farmers are so thoroughly convinced that Tubulars are way ahead of the very best "bucket bowl" machines that they have bought over twice as many Tubulars as they have of the three leading "bucket bowl" separators combined.

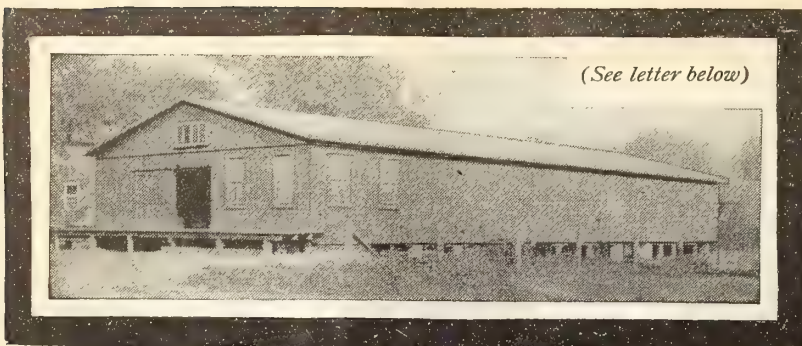

You will make no mistake in buying a Tubular. Made in the world's greatest separator factory. 1908 sales way ahead of 1907—out of sight of most, if not all, competitors combined. The additional fine features of our 1909 Tubular "A" are making 1909 better yet. Write for catalog No. 205

Sharples Tubular Cream Separators run so easily that the medium sizes can be turned by one who is seated.

(See letter below)

Amatite

ROOFING

Colchester, Connecticut, September 4, 1908.

Barrett Manufacturing Company:

Dear Sirs: The Amatite Roofing on my own grain store is giving much better service than I could believe it would at such a moderate price. It is by far the cheapest roofing on the market, when you consider the wearing qualities. Am going to use it on my other building. (Signed)

AMOS C. CASE.

This is a type of hundreds of letters which we get regarding Amatite.

It is better made; has better waterproofing material and weighs more per square foot than any other roofing of the same price.

And Amatite has one distinction which makes it stand out above all others—it has a *real mineral surface* which does away entirely with painting.

No other ready roofings compare with it, from the stand-points of low cost, no maintenance cost and absolute protection. Sample and Booklet on request.

BARRETT MANUFACTURING COMPANY

CONCORD, MASS.

MISHLER'S R. C. B. MINORCAS

Have proved that they are the leaders in the west by winning at the last Chicago show 1, 4 cocks; 1, 5 hens; 2, 3, 4 cockerels; 2 pullet, 1, 3 pens and silver challenge trophy cup for best display. In the best display they won more points than the two nearest competitors combined in a class of 53 birds, the largest of this variety ever shown in Chicago. "Greetings from Maple Vista," the finest Minorca catalogue ever issued will be mailed for four cents in stamps. It contains illustrations of 55 of the birds in my breeding pens, descriptions of breeding pens, prices of eggs, etc.

LLOYD C. MISHLER,

R. R. 1, NORTH MANCHESTER, IND.

GLEN EYER POULTRY FARM

New home of King's famous winning strain of Barred Plymouth Rocks have moved over only some select stock. Mating list now ready, gives description of new plant and the very best matings that I have ever bred from. Don't forget my new address.

O. L. KING

Glen Eyer Poultry Farm

Rockford, Ill.

"FLUFFY RUFFLES," FIRST NEW YORK HEN.

Items about a hen for which one thousand actual dollars were refused cannot fail to interest every poultry raiser. We quote from a recent letter from her owner, Mr. C. H. Welles, Stratford, Conn., breeder of the Welleslea strain of Barred Plymouth Rocks: "This hen is a granddaughter of a pullet that won special for the best color in 1905 at New York. 'Fluffy Ruffles' was first shown at New York three years ago as a pullet of four pounds weight and won fifth prize and special for best color in the class. She has since matured into a very large hen and won first at New York in 1908 and 1909 and champion female and special for best colored female for the past two years. Experts have pronounced her the finest specimen of Barred Rock female ever exhibited there and she has won the admiration of all poultry enthusiasts. The judge said she was ten years ahead of the times. It was here that I refused an offer of \$1,000 for her and after having bred her for two years I have cause to congratulate myself that I did not part with her for the above sum. Her finish of feather and evenness of straight, narrow barring attracts even the novice.

ELIZABETH.

9-lb. hen. Score 96. First as pullet, Indianapolis, 1908. Again as hen, 1909. Pronounced by Theo. Hewes as the best S. C. B. Minorca hen he ever saw. Bred and owned by E. E. Wilson, 921 Ashland Ave., Indianapolis, Ind.

This season I am breeding from one of her sons and four grandsons, it being my aim to establish a line of females with the characteristics of this champion hen."

MINNEHAHA POULTRY FARMS,
McNARY AND SMITH, PROPS.,
BANNOCK, OHIO.

This enterprising firm are breeders of R. C. R. I. Reds, S. C. Black and White, Orpingtons, Golden Wyandottes and Mottled Anconas. They issue a folder that is handsomely illustrated with good cuts of some of their prize winning birds, and the Silver Cups and ribbons they have won. As well as cuts of their buildings, which show they have a good and very large poultry farm. One house is 16x154 feet. They believe in and use a large number of colony houses. Great care is exercised in mating as strength as well as quality is the objective point. Their circular is free. Kindly mention American Poultry Journal in writing them.

In our April issue we made the mistake of locating Harry Morton, breeder of Rose Comb Brown Leghorns, at Howell, N. Y., when it should have read Hornell, N. Y. We also stated the price of eggs was \$2, \$3 and \$5. Mr. Morton has shown his birds at some of the largest shows in the country, including Madison Square Garden, and always wins his share of the blue ribbons. If you want something extra good in Rose Comb Brown Leghorns you should address Harry Morton, 94 Sherwood avenue, Hornell, N. Y., and mention American Poultry Journal.

ROOFING GUARANTEES.

When a maker guarantees his roofing it merely means that he puts his claims for it in writing, and if there is any dispute afterwards, there are thousands of ways in which the maker can evade responsibility if he chooses.

The makers of Congo Roofing, however, have devised an interesting plan which gives the buyer absolute protection. With each roll of roofing is furnished a surety bond issued by the National Surety Company of New York, guaranteeing the faithful performance of the guarantee by the manufacturers. This gives to any possible complainant a court of appeals to which he can go, over the head of the manufacturer. In fact, this guarantee bond so pledges that if the manufacturers of Congo Roofing should go bankrupt or close out their business, the Surety company would still continue to guarantee the reliability and satisfaction of Congo Roofing. The guarantee on the 3-ply is for ten years.

A copy of the guarantee can be obtained by addressing the United Roofing & Manufacturing Company, Philadelphia, Chicago and San Francisco.

MONEY IN EGGS.

Have you ever preserved eggs?

To the person who keeps poultry and sells eggs, or to the person who buys eggs, a valuable opportunity is presented, not only for the making of money, but for the supplying of his own table with fresh eggs the entire year at the cost of but 1c per dozen.

Of all methods tried, Water Glass seems to be the best and leading one. There are fewer failures with Water Glass than with any other method. Failure in preserving eggs with Water Glass is caused to a large extent in not buying the right composition of Water Glass.

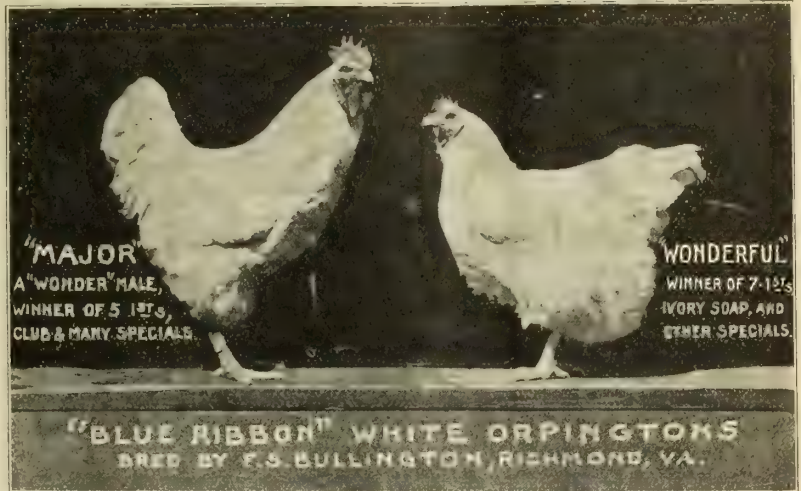

The Willett's Water Glass Egg Preserver

Company, box 56, Anderson, Ind., after experimenting five years, are able to put on the market Water Glass of just the right composition, at a very reasonable price. Why not write them for particulars and prices?

The Rose Comb R. I. Red breeder, A. W. Blanchard, of Beloit, Wis., has five finely

but the quality is there, and those who wish to improve their present stock or to make a start in the breed, and the right start, will make no mistake to get his mating list. He guarantees satisfaction in every case.

McMinnville Poultry Ranch, McMinnville, Tenn., home of the R. C. Rhode Island Reds, Columbian Wyandottes and Partridge

mated pens besides utility yards. His matings are the best he ever has had and contains all his prize-winners at Chicago, Rockford, Ill., Delavan, Wis., etc. His prices for eggs from his high quality stock are lower by considerable than many are charging.

Wyandottes, starts a display ad with us this month. This firm comes to us highly recommended and we in turn ask our readers to consider them when in the market for anything in their line. When writing please mention American Poultry Journal.

REDS! THE WORLD'S BEST—CORNISH QUALITY

Owner of Chicago King. Breeders, eggs, exhibition, both combs
EDWIN R. CORNISH, - - - - - EDWARDSBURG, MICHIGAN

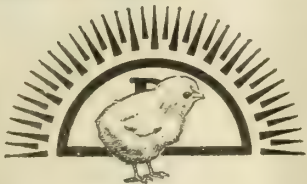

Feed for Poultry Profits!

Get the right food and you have the secret—every poultry journal, every department devoted to chicken raising, dwells on this point. Years of constant use by successful poultry raisers have proved that

The Dickinson Standard Brands

are best for little chicks, broilers or laying hens.

Sun Chick Starter

fed during the first 20 days,
makes sturdy little chicks.

Crescent Chick Feed

fed from
three to eight
weeks old,
makes fat,
tender
broilers.

Globe Scratch Feed

keeps
your hens
laying
indus-
triously.

The Dickinson Feeds are prepared and combined under the supervision of experts—men who have made poultry feeding a study. Our ingredients are perfect—only the sweetest, soundest cracked grains and seeds are accepted—and these are sifted and cleaned until they are free from dust and chaff—every grain is nourishing food.

The kind of poultry Dickinson Feeds make is the kind that pays—hearty birds—steady laying hens. Used on the most

famous poultry farms for many years—by the men who know.

In addition to "Sun" Chick Starter, "Crescent" Chick Feed and "Globe" Scratch Feed, we make the "Queen" Poultry Mash—a selected ground feed for fowls of all sizes, especially laying hens—and "King" Pigeon Feed, a mixed grain ration especially adapted for squab fattening. Ask your dealer for any or all feeds of the Dickinson line. If he doesn't carry them, write us and we will see that you are supplied.

THE ALBERT DICKINSON CO., Seed Merchants, CHICAGO-MINNEAPOLIS

Healthy Hens Always Lay

A hen that lays 50 or 75 eggs a year just about pays for her feed. But the hen that lays 150 to 200 eggs yearly earns money for her owner. You can quickly and inexpensively put all your hens in the money-making class by giving them

Pratts POULTRY REGULATOR

(For 37 years called Pratts Poultry Food)

It not only makes the hens lay the year round, but it keeps the entire flock in good health. The result is more fertile eggs, bigger hatches, stronger chicks, earlier layers and a larger market price. Pratts Poultry Regulator means a healthier flock and more money for you. No progressive poultryman can afford to be without it. Costs less than 1 cent a month per hen. If your dealer does not carry Pratts Poultry Regulator write us at once and we will see that you are supplied.

Write us for Pratts NEW Poultry Book, FREE.

Pratt Food Co. Department A Philadelphia, Pa.

CATALOGUES RECEIVED.

From sunny California comes the catalogue of the California Minorca Poultry Farm, Inc., August Schwartz, Mgr., Sunol, Cal. This company makes a specialty of Minorcas, White, Black and Barred. The Barred Minorca is one of the new breeds that are occupying the attention of the poultry world. This catalogue gives the English Standard for the breed. Mr. Schwartz was engaged in raising Minorcas in Germany for some twenty years and has many medals and diplomas won there. Some twelve medals are reproduced on one page, also three full page illustrations of diplomas. The catalogue is a very handsome one and contains many full page illustrations that are high class in every way. All Minorca breeders should write for this catalogue and mention The American Poultry Journal in doing so.

Quality Hill Poultry Yards, Canton, Ill., F. A. and Wm. T. Bennett, breeders of S. C. Reds and Barred Rocks. Mr. F. A. Bennett has been a S. C. R. I. Red specialist and his brother, Wm. T., a Barred Rock specialist, and they are yet, only they have joined forces, thinking by their united efforts they could accomplish more and render better service to their customers, of which they have large numbers. Both their Reds and Rocks have been winning at the Illinois

"RED WOOD."

R. C. Rhode Island Red male, owned by McMinnville Poultry Ranch, McMinnville, Tenn.

State Fair and state show for several years, also at Peoria, Canton and other shows. Mr. Bennett won the cream of the prizes at the National S. C. R. I. Red Club meeting last fall. Quality is not lacking and their prices are very low. You should get their handsome illustrated catalogue. It's free for the asking.

S. D. Lapham, Dearborn, Mich., birds of quality; the gold medal quality. Mr. Lapham issues a fine catalogue handsomely illustrated with good cuts of several of his prize winners, also of the gorgeous silver cups that his gold medal strain have won. The prizes were not won at local events, but in the largest shows and in the most hotly contested classes, some prizes being won in competition with 300 birds. Among others too numerous to mention we find New York, Chicago and Detroit. No one after reading his catalogue can question the statement that Mr. Lapham has "birds of quality."

W. R. Graves, Southboro, Mass., breeder of White Wyandottes and White Rocks, has won on his White Wyandottes in the past at such shows as Boston, Pan-American and New York and seems to be no less successful with his White Rocks, as at the late New York show he won on two entries on cockerel, first, and special for best colored male; two entries, first and second pullet; one entry, fifth pen. This record, considering the num-

PLANE'S S. C. WHITE LEGHORNS

won three silver cups at the Northern Illinois Show. Send for egg circular. Some extra good pens mated up.

JOHN C. PLANE, BELVIDERE, ILLINOIS

PRIZE WINNING COLUMBIAN WYANDOTTES

From my last year's Cleveland, O., and Columbus winners produced the 1st cockerel and 3, 1st and 3rd pullet, 2 hen, and 2 pen at the late Chicago Show. At Marion 1, 2 cockerel, 1, 2, 3 Pullet, 1st pen. A few choice cockerel trios and pens for sale. I can take care of a high class egg trade.

C. A. HAMILTON,

BOX 1, PLYMOUTH, OHIO

HANLON'S BUFF LEGHORNS

PRODUCE THE WINNERS. They have won the best prizes for years past. Lamon's Old Strain Pure. Eggs \$5.00 per 13, \$9.00 per 26. :

Phillip Hanlon, Jr. : Watertown, N. Y.

SINGLE COMB REDS

Zimmer's Red Raven Strain

ORPINGTONS—S. C. Black. Two pens of each breed mated by Judge C. W. Zimmer to produce exhibition specimens. Housed in fresh air quarters and fed carefully for production of strong germ, vigorous chicks. Fertility guaranteed. \$3 per setting. Fine Orpington Cockerels for sale. Quality birds bred from Madison Square Garden winners.

H. F. KENNERK R. R. 7 FORT WAYNE, INDIANA

S. C. Rhode Island Reds

The finest that years of line breeding on scientific principles can produce. Some choice stock left for sale. Send for mating list showing my great winnings at Chicago, Cleveland, and other big shows. Eggs from special matings \$3, from utility yard \$1.50 per setting of fifteen.

GEO. L. BUELL : : : : LORAIN, OHIO

ber of entries, leads all competitors. He has five pens of White Rocks containing his prize winners and many other high class specimens. In White Wyandottes he has four fine pens which he says are the best he has put together in his 21 years with this variety. He issues a mating list.

Sunnybrook Farm, West Orange, N. J., Charles D. Cleveland, prop., White and Columbian Wyandottes and S. C. White Leghorns. Their catalogue gives a description of the ten pens of high class White Wyandottes and twelve pens of Columbian Wyandottes. The winnings made by Sunnybrook Farm are too numerous to mention here. Syracuse, Hagerstown, Madison Square Garden, Chicago and Orange, N. J., are on the list, besides they have supplied winners at a large number of shows. You will want their catalogue. Please mention The American Poultry Journal.

Kaufmann & Windheim, Mitley, N. J., Rose Comb Reds. This enterprising firm originated the "American Beauty Strain" of R. C. Reds, which they claim is the greatest winning strain in America. This claim would seem to be justified by the long list of shows at which they have won. A partial list is Madison Square, Boston, Jamestown Exposition, Scranton, Indianapolis and Sacramento, Cal. They have seven fine pens mated for the egg trade. Their catalogue is free for the asking.

R. I. Sawyer, Menominee, Mich., breeder of Partridge Wyandottes, purchased one year ago the entire flock of Partridge Wyandottes owned by J. B. Hadaway, which put him among the foremost breeders of this variety. In his catalogue are found illustrations of five elegant silver cups, five champion shields, many medals and special ribbons too numerous to mention. Nine

pens containing many winners are fully described, which is free for the asking.

Troth Bros., props. of Prospect Orchard and Poultry Farm, Orleans, Ind., are breeders of Houdans. Their catalogue is illustrated with several cuts of their birds that look good to the writer. They will also furnish you with day old Houdan chicks.

T. W. Witten, Trenton, Mo., breeder of White Rocks, issues a neat two-color catalogue and describes his seven pens which contain his winners. He won silver cups, diplomas and club ribbons at the two big shows in Kansas City and Trenton, Mo., last season.

C. S. Byers, Hazelrigg, Ind., breeder of Buff, Black and White Orpingtons, has a handsome catalogue that tells you just what you want to know. He has been breeding Orpingtons for a good many years, devoting all his time to the business. It will be remembered he won at Jamestown Exposition. His late winnings at Chicago consisted of some 32 premiums. These records prove the quality of Mr. Byers' Orpingtons. His catalogue is free for the asking.

P. B. Condit, 2138 North Capitol avenue, Indianapolis, Ind., breeder of White Rocks, issues a large catalogue containing many good illustrations of his prize winning birds. Mr. Condit is the owner of Ivanhoe and he values him and his hen Superba at \$2,000. Mr. Condit made quite a clearing in the White Rock alley at Indianapolis, '09, besides which he has many premiums to his credit in the past. He has 15 hens mated for the egg trade.

Grove Hill Poultry Yards, Waltham, Mass., William Ellery Bright, prop., A. C. Smith, supt., Grove Hill, is noted for its S. C. Brown Leghorns and Barred Rocks, which have both been in the front

ranks of winners at three world's fairs and have produced two champion Barred Rock males at New York in three years. Their catalogue tells you all about it. You should send for it.

Mapleside Poultry Yards, Washington, N. J., White Wyandottes, Chas. Nixon, prop., issues a neat little booklet describing his birds and methods of doing business. It seems Mr. Nixon has been breeding and winning on White Wyandottes since 1896 and Madison Square, Jamestown, Boston and many other shows have surrendered many coveted prizes to Mr. Nixon's birds.

O. J. Lewis, Canton, Ill., sends his mating list of his Excello strain of S. C. Reds and Perfecto strain of Barred Rocks. Mr. Lewis says his business has increased and he has increased his yards. He won first cockerel and silver cup on S. C. Reds at Rushville, Ill., and third Barred Rock cock at Illinois State Show, '09.

George B. Ferris, prop. the Ferris Poultry Farm, Grand Rapids, Mich., breeder of S. C. White Leghorns. Here are bred exhibition and utility White Leghorns, the kind that lay as well as win. Mr. Ferris has won on these birds at a number of shows in Michigan, including Detroit.

M. L. Chapman, Wethersfield, Conn., breeder of White Rocks exclusively, gives his winnings since 1905, which include Boston and New York three times, which was first pen and first cockerel, 1909.

A. F. Almendinger, Buffalo, N. Y., issues a booklet describing his exhibition Rose Comb Brown Leghorns. His birds have won at Buffalo and Hamburg, N. Y.

Henry I. Miller, Lancaster, Mo., breeder of Cedar Bluff Light Brahmas, sends his booklet describing his matings.

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale. Eggs for hatching from my regular matings at \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100; from exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

Economical and Sure

I will ship live, healthy, thoroughbred chicks for the same or less money than you now pay for the eggs of same quality, so why spend your time hatching them yourself?

How can I do this? Simply because I make chicks a specialty—hatching thousands at a time in the largest exclusive chick hatchery in the world. My stock has won honors where competition is the hottest—at New York, Chicago, Boston, Cincinnati, Springfield, Fort Wayne, Indianapolis, etc.—they will win and make money for you. No specialty farm produces a cleaner, purer strain—no birds get better care than mine.

Chicks or breeding stock for sale in either White Rocks, White Wyandottes, Barred Rocks or S. C. White Leghorns—all raised on my own large poultry farm. Do not ask for other varieties.

Why Buy Chicks

Day old chicks are easily shipped almost any distance, as they require no feed for several hours after hatching. They are lighter than eggs, more easily handled when packed in my special shipping cases and are cheaper, safer, surer than the ordinary incubator chick every time. **Shipping them does not affect them in the least.** Read in the next column what customers say who have bought my chicks. I have hundreds of such letters on file. Isn't this pretty good proof of their superiority?

Proofs of Merit

"I now have 48 of the finest chicks anyone could wish for from the shipment of 50 sent me two months ago.

They are excellently marked—far better than I had hoped for." A. S. Dudley, Scranton, Penna.

"The chicks arrived the evening of the 1st of July in fine condition. We thank you for your prompt attention, also for the extra chicks."

Jno. P. Cowher, Philipsburg, Pa.

"The chicks I purchased of you have matured into as fine birds as I have ever seen. Your prices are higher than some others, but your chicks are worth several times more." B. C. P., Ft. Wayne, Ind.

Why My Chicks Pay

My guarantee covers a full count and **safe arrival** in first class condition at your nearest express office.

Hatched from my own high scoring breeding stock eggs, these little chicks of quality come to you at a price much cheaper than you can hatch them yourself.

Send now for my interesting catalog descriptive of my stock, prices and of high class chicks we are now booking orders on for early spring delivery. A postal will do; but send it today.

W. D. HOLTERMAN, FANCIER,
Ft. Wayne, Ind., Breeder of "Aristo-
crat" Barred Rocks, Offers
Eggs at Half Price.

This opportunity to secure aristocrat
Barred Rock eggs at half price after May
20 is certainly worthy of your consideration
if you want narrow barred, blue blooded
kind like Mr. Holterman has in his "Prince
Rinky strain."

Mr. Holterman has been line breeding
for many years past to establish this clean
cut, narrow barring permanently in his
strain. That he has succeeded is not to
be questioned by anyone who has seen his
birds or his catalog, where several genera-
tions are reproduced from photos which
have not been retouched. And this great
reduction in price at this early date gives
you a grand opportunity to secure chicks
that will mature in time for exhibition in
the winter shows. You will find Mr. Hol-
terman's advertisement appearing regularly
in our columns. Better send for his cata-
log and see for yourself. Address W. D.
Holterman, box 2, Fort Wayne, Ind. Al-
ways mention the American Poultry Jour-
nal.

**WILLIAM COOK & SONS, SCOTCH
PLAINS, N. J.,**

Originators of All Orpingtons.

Mr. Cook has issued a large and hand-
some catalogue, which required five tons
of paper to print it. It gives much val-

First prize White Wyandotte cock at
Toledo, Ohio, 1909. Bred and owned by
George Barkdoll, West Unity, Ohio.

uable information on each of the ten var-
ieties of Orpingtons originated by them.

We all know their birds have been win-
ning in the keenest competition. Their
latest success was nineteen firsts, ten
seconds and four cups at Madison Square.

The S. C. White Orpington cockerel ex-
hibited at this show by them was the
sensation of the show; \$1,000 was refused
for this bird. Visitors are always wel-
come at the farm, which contains 80
acres and is only nineteen miles from
New York City. Mr. P. A. Cook says
every order has his personal attention.
Owing to the large sum this catalogue
cost you are requested to send six cents
in stamps for it. Kindly mention The
American Poultry Journal.

Allin J. Thurner, Defiance, Ohio,
breeder of Rose Comb Black Bantams, has
been a breeder of Bantams for the last
seven years, and that he has good Rose
Comb Blacks is proven by his winnings at
the Defiance show, where he won gold and
silver specials for best display in the Ban-
tam class, forty-eight birds competing. He
also won five other specials, as well as 1, 3
cockerel and 1, 2, 3, 4 pullet. His price
on eggs is low and he guarantees eight
chicks. You will find his ad in this issue.

BUILDING?

Before decid-
ing on your roof-
ing examine into the
merits of Paroid.
The superior "wear proof"
water-proof solution with which
our Paroid felt is saturated and
coated positively insures a long
wearing surface.
Paroid cannot dry out, crack or
buckle. It will resist wind, water
and fire. Will not taint rain water.

PAROID ROOFING

is easy to lay, is attractive. It will wear
for years in any climate. Its use on U. S.
Gov't buildings for years shows the ap-
proval of the Gov't's expert engineers. It
has been used for years on factories and
mills and by farmers and poultrymen
everywhere.

OUR GUARANTEE: Buy PAROID
ROOFING, apply it to your roof and then
if you are not satisfied send us your name
and address and we will send you a check
for the full amount you have paid for the
roofing, including the cost of applying it.
Write for sample of Paroid, also
free booklet of plans entitled "Prac-
tical Farm Buildings" if about to build.

A BUILDING BOOM.

An unusual amount of building is going on all over the country. The Gordon-Van Tine Company, of Davenport, Iowa, report that their sales of doors, windows, moulding and other millwork are away beyond their expectations. Their estimators are almost snowed under with requests for figures on complete houses, barns and all classes of farm buildings.

This concern sells its entire output direct from its immense millwork and roofing plant to farmers, carpenters and contractors.

The prices average about 50 per cent lower than the lowest prices obtainable at retail lumber yards. In many cases two-thirds of the cost of an article can be saved by buying it direct from the Gordon-Van Tine Company.

Farmers who compare the prices on the 5,000 items of building material listed on the Gordon-Van Tine catalogue generally find that they have been overcharged about half by the retailers in their respective localities. Those of our readers who are

NOT TOO LATE.

Every reader of American Poultry Journal should write today for the Nebraska Incubator Company's new illustrated catalogue of the Fairfield incubator. There is money in the poultry business, and Mr. Thompson, who makes the Plainfield incubator, can tell you how to make it. He guarantees his incubators and will send you one on an absolutely free trial for two hatches to prove to you that they are as good an incubator as there is made today. Write him without fail and address him as follows: S. C. Thompson, 217 Main street, Fairfield, Neb.

W. H. WIEBKE, FT. WAYNE, IND.

The Brown Leghorn specialist sends his catalogue, which is illustrated with cuts of his New York, Boston and Madison Square Garden winners, all true to life and typical Leghorns. His catalogue is very complete, giving you just the information you want as to the early history of the

all green hands, and don't amount to shucks. What is the country coming to? Pessimist.

Things aren't nearly so bad as you think. While you may not be able to get farm hands like you used to, the great improvements in farm machinery has largely done away with the need for them. For instance, Planet Jr. farm and garden implements, made by S. L. Allen & Co., Box 1107 T, Philadelphia., take the place of as many as six men working in the old way and they do better work. Get one of their catalogues and I can safely say you can find a way to overcome your trouble.

In our April issue, in reporting the winnings of M. B. Willis, Auburn, Ind., who breeds S. C. Black Orpingtons, we said his cock bird never was defeated, but failed to mention that he had won first at the Defiance, Ohio, show.

E. J. Barker, Thorntown, Ind., who has the greatest prize-winning flock of Light Brahmas in America, is offering eggs from

One of the 1909 matings in S. C. Black Orpingtons on the plant of C. S. Byers, Hazelrigg, Ind.

setting ready to build or repair should write for this catalogue before signing contracts for material. Foresight is better than hindsight every time. Address Gordon-Van Tine Company, 1724 Case street, Davenport, Iowa.

It costs nothing to get Gordon-Van Tine prices, as the catalogue is free for the asking and they will even make up a complete estimate for you on a house bill or barn bill without charging a cent for the work.

It is estimated that the Gordon-Van Tine Company saved their customers a million dollars in 1908. This saving will undoubtedly be exceeded in 1909, as the building boom now in full swing will mean a heavy increase in their volume of sales. Farmers are putting up a better class of buildings this season than ever before. It is particularly gratifying to note that farmers are building thoroughly modern homes, with the same up-to-date conveniences found in city residences.

Leghorn. He also gives you information how to mate Brown Leghorns to produce "show specimens." This valuable information should be in the hands of every amateur trying to breed the Brown Leghorn. A further description of his sixteen pens, together with his many winnings in the best shows in the country, which include Boston, Madison Square, Chicago, Indianapolis and Cleveland. Some of these shows he has attended three times, always in hot company, and always winning more than his share of the blues. His stock is all sent out on an absolute guarantee of satisfaction or your money back. This valuable catalogue is free for the asking. If you breed Brown Leghorns you should send for it. Mention the American Poultry Journal.

It is almost as much as my life's worth to get the right kind of farm-help out here. It is true, the hard times have brought fellows along looking for a job, but they're

his best matings at \$5 for fifteen. Send for his 1909 catalogue.

Good hog fence 22 inches high, 15 cents a rod. Other heights very low. Write Kitzelman Bros. for free catalogue. See their ad in this paper.

Arno H. Schoff, Campville, Tioga county, N. Y., breeds some New York prize winners in S. C. Black Minorcas, and has three pens mated for eggs from which to raise more prize winners.

A. W. Blanchard, Beloit, Wis., calls attention in his ad to the June sale of breeding stock from his pens of Rose Comb R. I. Reds. As Mr. Blanchard has been a good winner of prizes at Chicago, Rockford and elsewhere, this will prove a good opportunity to get some of his breeders at bargain prices.

ORPINGTONS

— BUFF. BLACK AND WHITE —

I won more prizes on Orpingtons at 1908 Chicago Shows than any other exhibitor. My matings closely approach perfection and finer eggs have never been offered by any Orpington breeder anywhere. There's something novel in my mating list for 1909. Sit down right where you are and order a copy. Prompt attention to all inquiries and orders.

C. S. BYERS

Orpington Specialist
and Judge

HAZELRIGG, IND.

LICE stop hens from laying, reduce flesh and make them an easy prey to disease. If you want to have healthy, productive poultry, take no chances with unknown exterminators, but use

Pratts LICE KILLER

(Powdered Form)

It quickly kills all Lice on poultry and insures increased profits to the poultry raiser. Best for little chicks, big chicks, setting hens, and incubator chicks. It is sure and quick in its action, safe and economical to use and will produce results that cannot be obtained in any other manner.

Pratts Head Lice Ointment can't be equaled for little chicks. Best remedy for scaly legs.

If your dealer cannot supply you, send us 10 cents for the Ointment and 25 cents for the Powder and we will supply you prepaid.

STANDARD BONE CUTTER COMPANY, Milford, Mass.

J. OLIVER WILLARD, LINDEN, MICH.,

Buff Orpington Specialist,

Sends his catalogue and mating list, in which he gives a list of the prizes, as long as your arm, that have been won by the birds in his yards. These include many winners at Guelph, Ottawa, Toronto, Madison Square, Boston, Detroit, Jackson and many other shows. They claim their Pen 1 is one of the best pens of Buff Orpingtons in the world. The male at the head of this pen is an undefeated champion and has a long list of honors to his credit. Long prices have been refused for this bird and as he is wonderfully perfect in type as well as color he should produce some grand winners, as he is mated to some of the finest females this country affords. Mr. Willard's nine other pens are but slightly behind this one and his prices are reasonable. No money or pains have been spared in getting together this wonderful flock of birds. While they make a specialty of Buff Orpingtons, they also have some fine Black Orpingtons. Everything is fully guaranteed and if you want quality in Buff Orpingtons you should write Mr. Willard.

DR. G. W. TAYLOR, ORLEANS, IND.,

Ships Some of His Houdans of Quality to Honolulu.

The fame of Dr. Taylor's Houdans has not stopped within the borders of America, but has spread abroad, and the Doctor has recently made a shipment to Honolulu. This

White Wyandotte cockerel at head of one of the best breeding pens of W. R. Graves, Southboro, Mass.

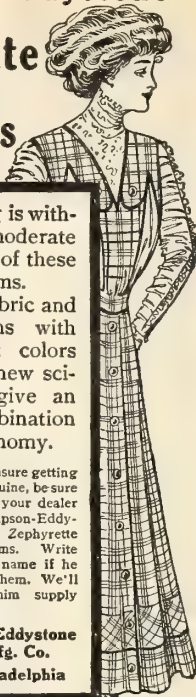

is but one more link in the chain of splendid achievements attained by his Houdans of Quality. The Doctor has been forced to give up his profession in order that he may devote his entire time to his Houdans. This shows what may be accomplished in the breeding of fancy poultry by anyone who will treat the people right and put brains and good, conscientious effort into the business. The Doctor issues a Quality catalogue, giving his winnings at such places as Chicago, St. Louis, Boston, Indianapolis, Ind., and Tennessee State Fairs. It also describes his thirty pens, which range in price to fit the purse of anyone. When in the market for Houdans of Quality write Dr. G. W. Taylor and mention American Poultry Journal.

Geo. Barkdoll, West Unity, Ohio, breeder of White Wyandottes, informs us that the eggs he sold last season did well for his customers. At several of the prominent shows birds hatched from eggs he sold won first prizes. He claims his matings this season are far ahead of those of last season. Mr. Barkdoll is selling eggs from these matings below the usual price for eggs of this quality. His 1909 mating list will be sent on request. Mention American Poultry Journal.

Only 15 cents a rod for a 22-inch hog fence, other heights in proportion. See Kitzelman Bros.' ad in this paper.

Simpson-Eddystone

Zephyrette Gingham

Stylish dressing is with-in easy range of moderate means by the use of these fine dress gingham.

OUR EGG FARM is the largest and best equipped of its kind in Wisconsin, if not the Northwest. We produce the highest grade of Table Eggs, summer and winter, which always sell at a premium. Our fowls are Single Comb White Leghorns raised by us from eggs bought of C. H. Wyckoff, Aurora, New York. Our breeding stock has been selected from the yearling hens, mated with the most perfect and vigorous cockerels. We will use most of the eggs from these matings for hatching chicks for our next winter's layers, but have a limited supply to sell. Our price is \$1.50 for 15; \$3 for 50; and \$5 for 100. Send for booklet. Bechtner & Son Co., Waukesha, Wis. 4-2

GRAND SUMMARY---WORLD'S 20 YEAR 1st PRIZE RECORD

World's Champion of 1906,
Our \$2,000 Male.

Winner of First Prize and Sweepstakes Special at New York's Greatest Barred Plymouth Rock Show, nearly 500 in line. Is descended from the sire of First Chicago Cockerel, 1902; also from the sire of First Chicago Male, 1906. These and other Chicago 1st Prize Winners were bred by us and hatched by customers FROM EGGS WE SOLD.

The "Lee Belle" Pullet I bought of you scored 94½ points and tied for 1st at our show.

Peter T. McGovern.

Pittsfield, Mass., Jan., 1909.

My 1st prize Cockerel at our Show, score 94½, was from the setting of eggs I bought of you.

W. H. Wait.

Dalton, Mass., Jan. 1909.

The Cockerel came in good condition. He took 1st easily, and his lead gave me 1st Pen.

Guy F. Newcomb.

Great Falls, Montana, Jan., 1909.

"Ringlet" First Prize Exhibition Pen at Madison Square Garden, New York.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winter of 1907-1908 . . .

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My Clean Sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 50-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

SENSATION FOR JUNE

IS OWEN FARMS' HALF PRICE SALE

1st New York, 1907.

Half the birds in our breeding pens are for sale after May 15, for just half their value Feb. 1st, prior to the egg season. Males and females in all varieties and in any number, now

\$2.50, \$3, \$4, \$5 to \$15 each

worth \$5, \$6, \$8, \$10 to \$30 each

These birds will be carefully mated for best results, are in perfect condition, and you can secure plenty of chicks from them this year.

June and July hatched chicks are always the best colored of the year, and properly reared they grow into winners for the January and February shows.

These birds are all line-bred from the leading winners at New York, Boston, Chicago and the other great National shows. They have the best blood lines in America and are what you want to help you reach the top.

Each year we have sold hundreds of birds for half price during June and July. This year we will give our customers the advantage of two weeks more breeding from these fine birds. Prompt early orders will give you full advantage of this offer.

REMEMBER, every bird that does not please at the price paid can be returned at our expense and money will be cheerfully refunded. Varieties are **Buff and Black Orpingtons, Barred, Buff and White Ply. Rocks and White Wyandottes.**

Send us the amount you wish to pay and secure prompt shipment after May 15th. Catalogue and mating list are free. Please mention this paper. Address

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.
358 DEARBORN STREET -- CHICAGO, ILLINOIS

GIANT RADISH from JAPAN

Cut from Actual Photograph of Radish.

Grows 1½ Feet Long—Seeds FREE to Our Readers

What do you think of a variety of radish that weighs thirty pounds, which is often a foot and a half long and more than eight inches through, which is as tender and sweet during the hottest July weather as the earliest spring radishes, and which, notwithstanding its immense size, never becomes hot or pithy; which can be eaten raw like an apple, can be cooked like turnips, and when pulled late in fall will keep late into winter as sweet and crisp as when pulled. Add to this the fact that the tops, which grow to be two to three feet long, make fine "greens," and you have a pretty good description of the giant radish, Sakurajima, a recent introduction from Japan.

The Fruit-Grower has secured practically all the seeds of this splendid radish in America, and I want you to have a package for planting this season. There is plenty of time to plant for this is a hot-weather radish, and must be planted late.

This splendid new radish was first called to my attention by one of our readers on Long Island. He has grown Sakurajima radish for two seasons, and says that last year they averaged fifteen pounds in weight and every radish was tender and sweet, and did not get hot at any time.

Hon. W. J. Bryan, seeing our advertisement, writes: "You are the man I am looking for. I saw the Giant Radishes in Japan, and want some seed. I saw rad-

ishes 15 to 18 inches long, and the flavor is good. I have been intending to send to Japan for seed. Now, I will buy them of you, or subscribe for your paper—in fact, you can trade with me on your own terms."

These Seeds are Free with a Trial Subscription to The Fruit-Grower

Here is the way to get the seeds: Send me 25 cents for a six months' trial subscription to **The Fruit-Grower**, and a package of the seeds will be sent you absolutely free. This trial offer gives you **The Fruit-Grower** six months at **Half Rate**. Regular rate \$1.00 a year.

The Fruit-Grower is the leading fruit paper of America; it is devoted solely to horticulture, and has 70,000 readers who swear by it; it is clean and up-to-date—no whiskey or medicine advertisements. Ask the editor of this paper about **The Fruit-Grower**. He knows the paper well, and knows I could not afford to make an offer of this kind unless I knew that both **The Fruit-Grower** and the Sakurajima radish will make good. Send 25c, coin or stamps, at my risk, for a six months' trial subscription, and seeds will be sent by return mail FREE. Write Today.

JAMES M. IRVINE, Editor The Fruit-Grower, Box R, St. Joseph, Mo.

Special Summer Bargain Offer!

Save 30% to 50% on Your Purchases!

Chicago House Wrecking Co.'s 1909 Sale of Merchandise!

From Sheriffs', Receivers' and Manufacturers' Sales!

Lumber and Building Material!

100,000,000 feet of Lumber for sale. **THINK OF IT.** The Chicago House Wrecking Co. offers you an opportunity to buy Lumber and Building Material today at prices at least 50 per cent below what you could purchase it for a year ago. We can do it because we buy in such enormous quantities direct from the saw mill that we are able to control their output; we are also continually buying at Forced Sales. The Lumber we're offering consists of the very highest grades manufactured. Nothing "WRECKED" about it but the prices. It is clean stock and as good or better than your local dealer sells. We have Lumber of every kind. Lumber for your house or your barn, your church, meeting house or building of any kind.

Never again will Lumber be offered at the low price we are selling it for today. This is not an idle statement. It is made after the most careful thought. Every year the supply is diminishing and the manufacturers must get more money for it, but we say to you that if you are ready to buy now, you can save from 30 to 60 per cent.

Furniture & Household Goods!

Our wonderful Furniture Catalog containing hundreds of pages of genuine bargains with beautiful illustrations in natural color effects is sent free on application. 10,000 bargains representing high-grade, brand new Furniture, Carpets, Rugs, Linoleum, Stoves, Office Furniture and General Supplies. Bargains from Forced Sales of every kind, and nothing of the shoddy nature about the goods, either. Not the kind you would buy from the regular run of merchandise houses, but the sort of good furniture that is built "for keeps." Manufactured for city trade and now offered to you at as low a price as you can buy it if you were right in Chicago at our warehouse. This is a chance you must duly appreciate. We can supply your home complete, and we will do it at money-saving prices in every instance.

You can buy everything you need to furnish your home. Every article is covered by a guarantee so broad that you cannot go wrong. Favor us with your order. Write for our wonderful Bargain Catalog and let's convince you our prices are right. Write us today.

Hardware Bargains!

Steel Shovels 30c, Steel Hammers 25c, Handled Axes 50c, Steel Hatchets 30c, Electric Door Bells 60c, Hot Lunch Dinner Pails 20c, Meat Cutters 75c. These are but samples of our ability. We have everything complete in the hardware line. Door Locks and Knobs, Builders' Hardware in general—a new clean stock of hardware at wrecking prices.

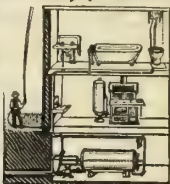

STEEL ROOFING, \$1.60 PER SQUARE

That's our price on our new high grade, semi-hardened steel roofing. \$1.60 is our price for first; \$1.85 for corrugated or V-ripped. This roofing is light weight. It comes in sheets 22 in. wide by 6 or 8 ft. in length. It is strictly brand new, first-class. At this price we prepay freight in full to all points east of Colorado except Oklahoma or Texas. Prices to these and other points on application. This freight prepaid proposition applies only to this roofing advertisement and has nothing to do with any other offer. Write today.

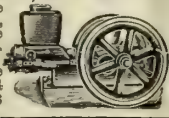

WATER SUPPLY OUTFITS, \$48.00

You can live in city comfort even though your home be on a farm. From \$48.00 upwards you can buy a complete outfit needed to give you these comforts. With our comprehensive instruction book you can install the outfit yourself. Let's tell you more about it. Our interesting book on water works systems is free for the asking. Remember it gives ample fire protection and reduces your rate of insurance.

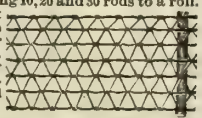

Gasoline Engines, 2 H.P. \$49.75

A strictly high-grade, brand new, fully guaranteed engine, complete in every respect. Price includes electric igniter, battery lubricator, and in fact a complete outfit ready for use. Here is an engine simple to operate, which we sell on 30 days free trial, so you take no chances. We give a five-year binding guarantee against defective workmanship or material. 4 H.P. \$96.75; 2 H.P. \$177.50; 10 H.P. \$265.00.

20-Inch High Galvanized Fencing, Per Rod 15c

20,000 rods of new square mesh and diamond mesh fencing for sale. It is put up in rolls containing 10, 20 and 30 rods to a roll. It's new, clean stock, bought by us at manufacturer's sale and now offered at 80 per cent less than regular prices. Better buy new while our stock lasts. We have but a limited supply for sale and orders are rolling in.

Iron Pipe, 3c Per Foot

Wrought Iron Pipe with couplings. Thoroughly overhauled and practical for further service; in random lengths. Prices per foot: 1/4 in. 2c, 1/2 in. 2 1/2c, 1 in. 3 1/2c, 1 1/2 in. 4 1/2c, 2 in. 5 1/2c, 2 1/2 in. 6 1/2c, 3 in. 7 1/2c, 4 in. 8 1/2c, 4 1/2 in. 9 1/2c, 5 in. 10 1/2c, 6 in. 11 1/2c, 8 in. 13 1/2c, 10 in. 15 1/2c. Our high grade lap welded light weight iron pipe with new threads and couplings is the best used pipe material ever offered. Satisfaction guaranteed.

Rubberized Galvo Roofing, \$1.25 per sq.

The best roofing on the market. Its base is pure mineral wool and genuine asphalt. No tar, residuum or other injurious matters used in the construction of this roofing. It is positively guaranteed to give lasting service. We have it in three grades, 1-ply at \$1.25 per square; 2-ply at \$1.40 per square and 3-ply at \$1.75 per square. By a square we mean 108 sq. ft. or sufficient to lay a square. Our price includes nails, caps and cement to make the laps. At this price we prepay the freight in full to your railroad shipping point. All points east of Colorado except Oklahoma or Texas. Prices to those points on request.

Barbed Wire, \$1.80 for 80 Rod Reel

10,000 reels of this wire for sale. It's the best galvanized material on the market. It is made of No. 14 wire with the barbs 3 in. apart. It has all the strength of the regular grades of barbed wire and costs less for transportation. Each reel contains exactly 80 rods, so that you know just how much to buy. It is not sold by the weight. It is made of high-grade tempered steel wire, with the proper tensile strength, and built for barbed wire purposes. You can't go wrong if you buy it. Each reel weighs about 55 lbs. Price for 80-rod reel, \$1.80.

DOORS 40c; WINDOWS 29 CENTS

Bargains of all kinds. Our special catalog shows a marvelous aggregation of bargains. You can't be right until you have a copy of it. Here are some quotations from our new price maker. Barn Sash 86c; Storm Sash 70c; Stall Sash 21c; Hot Bed Sash \$1.55; Windows 50c; Panel Doors 80c; Glass Doors \$1.75; Window Frames \$1.25; Door Frames 50c; Base Angles 2c; Corner Blocks 2c; Base Blocks 8 1/2c; Inside Trim 60c; Plate Rails 6c; Stair Newels \$1.85; Stair Rails 7c; Porch Balusters 6c; Porch Rail 8c.

PAINTS, 30c GAL.

This is our high grade Premier ready-mixed paints put up in strong cardboard cans and packages. No better mixed paint on the market at this price. We can furnish it in all colors. Covered by a binding guarantee. Barn paints 80c per gal. Cold water paints 6c a lb.

GALVANIZED FENCE WIRE, \$1.50 PER 100 LBS.

At this price we supply our new galvanized wire shorts. They are put up 100 pounds to the bundle. By shorts we mean wire that comes in lengths, ranging anywhere from 50 to 500 ft. It is good for all general purposes. We can supply it in all gauges. Our price on gauges 11, 12 and 14 \$1.50 per 100 lbs. BB telephone wire 60 lb. coils, No. 12, \$2.85 per hundred lbs.; No. 14, \$3.10 per 100 lbs. Order today.

KITCHEN SINKS, \$1.40

That's the price of an 18x80 white enameled, cast iron, flat rim kitchen sink. We have blue steel enameled kitchen sinks in one piece, seamless, size 18x30 at 75c. Kitchen sinks with backs from \$4.00 up. A Lowdown Water Closet outfit with a white enameled tank, latest and best closet tank manufactured. How to Answer This Advertisement

Read carefully all we have to say about the different articles offered for sale. We would advise you to send us your order at once. We will ship C. O. D. where a deposit of 25% in cash accompanies the order, balance to be paid after material reaches destination. If, however, you do not wish to order at once, then we suggest that you tear this advertisement out of the paper, cross such items on the ad as interests you most, fill in the coupon to the left and mail it to us, and we will give you more detailed information. If you do not wish to mutilate the page, just write us where you saw this advertisement and just what item interests you most, and we will send you free of all cost our Catalog with full detailed information. A postal card will do the work. Write us fully today.

Our Wonderful Catalogue!

We publish a catalog showing illustrations and full descriptions of all the various stocks that we have for sale. It will be mailed free of cost to anyone answering this advertisement and following the directions as noted in the paragraph on the left. You need this catalog. It's a book that every wise person must have in his or her possession. It tells the story of the wonderful business of our Company and of how we have gathered our stocks together, and it shows you the low prices at which we supply these articles to the public. Thousands of customers throughout this land will confirm our statement that our business is conducted honest and fair.

A NEW DISCOVERY!

WHICH WILL POSITIVELY DETERMINE THE FERTILE EGG
BEFORE INCUBATION

SEE THAT "XX"?
POINTS THE WAY.
START RIGHT
YOU END RIGHT

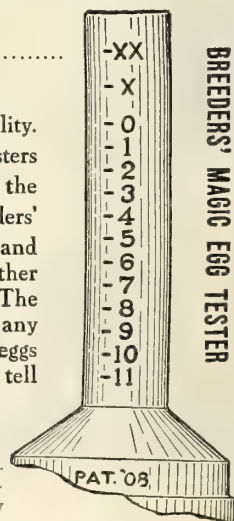

"XX" means fertility.
Every good egg registers
at some point on the
scale of "The Breeders'

Magic Egg Tester," according to its condition, and this wonderful little instrument tells instantly whether an egg is fertile or not BEFORE incubation. The scale reads like a thermometer and so easy that any 10-year old child can test eggs. The fertile eggs register at "XX" and the tester never fails to tell whether fertility is strong, weak or absent.

A well-known poultryman of Western New York says:

Niagara Falls, N. Y., Jan. 19, 1909.

"Used your Breeders' Magic Egg Tester since Aug. 1908. 100% correct in all kinds of tests. Simply perfect. Invaluable." F. C. Seiler.
Breeders' Magic Egg Tester sent complete, ready to use, by mail post-paid \$2.00. Write for circular. Demonstrated in the Poultry Department at Buffalo Agricultural Fair with over 500 sales in the county. Order filled on day received. Money refunded in every case if not satisfied.

I WANT YOU

to get my new, handsome winter of 1909 showing Fashion Book,

HUNDREDS OF LATEST STYLES

with illustrated lessons on Cutting and Dress-making, FREE, and I will sell you all the patterns you want for five cts. each. They are the same patterns you have always paid 10c & 15c for at the stores, made by the same people, and correct in every detail.

I publish the FARMER'S CALL, a weekly paper for every member of the family. An especially interesting feature each week are the children's letters; and the Woman's Department is unusually strong and instructive. Among the special features for women folks is its fashions in which I show the 50 patterns. Let me help you to save money.

MY SPECIAL OFFER

Send me 25c and I will send you the Farmer's Call every week for one year (about 1000 pages) and will send my big Fashion Book to you free. I also agree to sell you any pattern you want thereafter for 5c. I can sell them for 5 cts, because I buy them by the thousand and don't make any profit. I don't want any profit. I want your subscription to the FARMER'S CALL. You will save many times the cost of my offer in a year. WRITE TO—

You can use this coupon—cut it out now and mail to me with 25c—1c and 2c stamps taken, but a quarter almost always goes safe:

JOHN M. STAHL—Enclosed 25c for Farmer's Call for one year, your book of patterns, postpaid, and privilege of buying patterns at 5c each.

Name.....

P. O.....

State..... 43

Very Special Offer

Send me 50c and I will send you the Farmer's Call for one year, the Illinois Farmer for two years, the Fashion Book prepaid, with privilege of buying patterns at 5c each. Use above coupon, but enclose 50c and write I. F. in the corner. Cut out the coupon right now, fill out, and send to

JOHN M. STAHL, J. P. Sta., Chicago, Ill., (Prop. Farmer's Call—past 25 years.)

The Incubator YOU Want is the One that Hatches the Most "Livable" Chicks

It makes no difference to you on what principles a machine hatches—BUT it does make a difference how many "livable" chicks you get from each hatch. It is very discouraging to find at the end of the 21 days that from $\frac{1}{2}$ to $\frac{3}{4}$ of the chicks are "dead-in-the-shell" and a few days later to have "white diarrhoea" carry off $\frac{1}{2}$ the remainder. The trouble is improper hatching. What you and every other buyer of an incubator wants is a machine that hatches chicks that live. When we tell you we have that incubator we don't base our claim on theory or guesswork, but instead on actual, practical results already obtained by those who are operating our machines. For instance read Mr. Leon L. Hough's letter. We have hundreds just as strong.

Prairie State Incubators and Brooders

work on a different principle than any others. They copy nature almost to perfection. That's why they not only hatch more chicks and raise them, but why they hatch bigger, stronger chicks—chicks that live and incidentally they are the kind that bring you profit. You will be interested to learn how they do this so successfully. Our 1909 Catalog tells the whole story. It's free.

PRAIRIE STATE INCUBATOR CO., 468 Main St., Homer City, Pa.

12,000 Big Strong Chicks

Were hatched by me in Prairie State Incubators during April, May and June this year. The batches averaged better than 99 per cent and went as high as 98 percent. These chicks were shipped as far as 2,000 miles with only 7 reported dead in the whole 12,000. How is that for vigor? LEON L. HOUGH, Canisteo, N.Y.

You ought to be feeding Your Chickens out of These 2 sacks right now

This is developing time. Here's developing food. You want big, strong, healthy, early laying fowls. Well, then set about feeding systematically to that end. Darling's Beef Meal lays the foundation. It's just about half pure protein. It makes big bones and gives a good big frame work. Then Darling's Forcing Food rushes chicks on to early and full maturity. It gives you the weight in broilers and roasters that brings in the right kind of profits.

Darling's Poultry Foods

are used by the live wires in the poultry business. They are making money because Darling's Foods get results. If you have not used the Darling line, you'd better start now. You'll quickly see the difference in your profits. Chick Feed, Beef Scraps, Scratching Food, Grits, etc. A complete System of poultry feeding.

Get our fine free catalog for the facts. Send now to our nearest office.

Flower Offers Without Cost to You

Five Beautiful Roses (Order as No. 101)

Many of these roses when in bloom sell for \$4.00 to \$6.00 per dozen at a florist's. You get all these five varieties—Climbing Meteor, bright red, yellow Rambler, bright pink, pure white.

Four Elegant Ferns (Order as No. 104)

This collection consists of the leading varieties—Boston, Emerald, Fountain, Asparagus. These varieties frequently sell for 50 cents each.

Five Fragrant Carnations (Order as No. 109)

The carnation was President McKinley's favorite flower. This collection contains five different colors—one rich scarlet, one deep pink, one light pink, one white, one white striped with scarlet.

Six Magnificent Chrysanthemums (Order as No. 102)

We will send in this collection six of the large, showery Japanese varieties, as follows—one pure white, one deep yellow, one light yellow, one light pink, one deep pink, one beautiful red.

OUR OFFERS

No. 1—Send us only 35 cents and we will send you FARM AND FIRESIDE for the rest of 1909—20 numbers—and any one collection of flowers above, prepaid.

These collections if purchased from a flower dealer at retail would cost you from 50 cents to \$1.00 each. (Be sure to state which month you will want your flowers sent to you.)

Our Guarantee—These plants will be large, healthy and well rooted, and will bloom this season of 1909. They are exactly as described or money refunded.

Farm and Fireside comes twice a month, and stops when your time is up. It is for the farmer and his whole family. There is no other farm paper quite as interesting, helpful or valuable. FARM AND FIRESIDE prints and circulates each month more copies than any other farm paper. That shows how well it is liked!

Send your order promptly to FARM AND FIRESIDE, Dept. D, Springfield, Ohio

DEARBORN POULTRY YARDS

S. D. Lapham, Proprietor Box A, Dearborn, Michigan

Your Chicks Have Been Hatched in MODEL INCUBATORS and Are Being Raised to Maturity in MODEL BROODERS—WHAT NEXT?

June and July are the fast growing months for the young brood. When they must be kept free from insects, pests, and diseases of early chick life.

Model Poultry Remedies, Disinfectants and Insecticides bear Serial No. 22491, prove that they are true to label as required by the Food and Drugs Act. Here are some remedies that you should always keep on hand for poultry troubles and to anticipate emergencies:

Model Disinfectant, unsurpassed as antiseptic germicide and insecticide; also possesses effective medicinal properties.

Model Lice Dust, packed in 5-oz. 15-oz. 45-oz. and 100-oz. packages. Small sizes have sprinkler tops for dusting the powder on poultry.

Model Lice Spray, just the preparation for spraying roosts. Put up in 1-qt. 2-qt. 1-gal. and 5-gal. cans.

Model Roup Cure, breaks up the colds when your growing stock gets wet. **Model Egg-Maker**, pushes your pullets along to early maturity, and insures fall and winter eggs when prices are high and profits large.

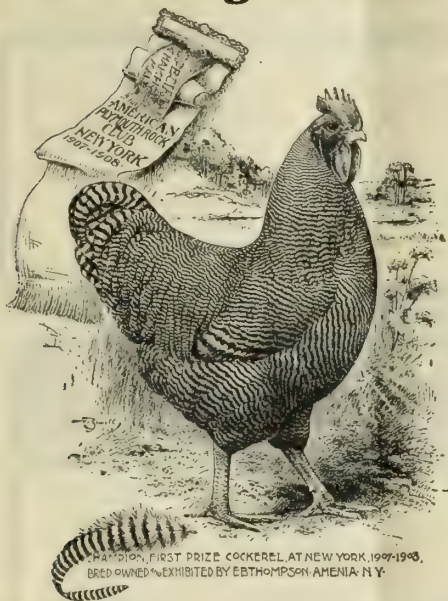

These are a few Model leaders. We have a complete line fully described in our poultry book which we will be glad to send you on request. This book tells all about the successful handling of poultry—how to run incubators and brooders and shows you the way to largest profits in the poultry yard.

Collies For Sale

Brood matrons, grown dogs and puppies. We can furnish pairs not related, from the best imported and American bred stock. If you want a dog for the poultry yard, farm, city watch dog or a companion for children, the Collie is the kind you should buy. They are money makers and money savers. Build a partition fence and you can raise poultry and dogs with one expense. Send 25c for booklet on training. Mention A. P. J.

F. R. Clark : Secy. and Mgr. Sunnybrae Kennels : Bloomington, Ill.

MURDER

Now is the time of year when your poultry houses are alive with the mites or jiggers that prey upon your chickens at night and which drop off, full of blood sucked from the chickens' bodies in the mornings. This occurs nightly and it is plain to be seen that such sapping of the blood of your chickens weakens them, retards their growth and prevents them from laying as many eggs as they otherwise will do. **Schild's Lightning Lice Murder** is the only known remedy that will positively and completely kill these mites or jiggers and all other poultry lice, and leave them dead in piles for you to see. It is simply scattered over the poultry houses by the hand. Not a mite can possibly escape. Our Murder is very powerful and may be used successfully to disinfect all foul smelling places. **We guarantee results or money refunded.**

THE UNDEFEATED
CHAMPION STRAIN
OF AMERICA

¶ Winners of blue ribbons, silver challenge cups, medals, gold specials and many other coveted honors at every noted show in the country and in the strongest possible competition. ¶ REMEMBER, no matter where you want to show, no matter what the competition, we can furnish the winners. ¶ Send for 80-page fully illustrated book on the Houdan. It gives full descriptive matters on the Houdan. "It will put you wise." Postage twenty cents. Please mention American Poultry Journal when writing.

REV. C. E. PETERSEN ¶ Pres't Am. Houdan Club from 1900 to 1907 ¶ BRIDGTON, MAINE

BRAHMAS : BRAHMAS : BRAHMAS

On and after June 1st, in order to make room for our young stock, we will sell the birds from our thirty Light Brahma breeding pens, including the CHOICEST LIGHT BRAHMAS that have ever been produced, at prices which are unprecedented for stock of this quality. Many of these birds won first, second and third prizes at Chicago, Toledo, Detroit, Boston and Indianapolis. We have bred from these pens ourselves this year, and have sold eggs from some of them at \$1 per egg and the others at \$5 per setting, and our customers have been greatly pleased. Prices while they last, cocks \$3, \$4 and \$5 each; hens \$1.50, \$2.50 and \$3.50 each. Send your money for as many as you want. We will give you full value and guarantee satisfaction, or money refunded. 100 highest class Barred Rock hens; large, healthy, splendid layers, true breeders, only \$1.25 and \$1.50 each. Order at once—they will go fast at these prices.

The Secret of Making Your INCUBATOR Work Successfully is a Reliable Thermometer

IF we wanted to hatch chickens and had to make a choice we would select a poor incubator with a good thermometer, rather than a good incubator with a poor thermometer. In an incubator the process of hatching is this: At a temperature of 103 degrees, an egg proceeds normally through the various stages that change it from an egg to a chick. At other temperatures, this development is retarded, or it may be wholly arrested, completely killing the germ. A proper heat properly regulated is the whole secret. Fortunately there are good incubators equipped with good thermometers.

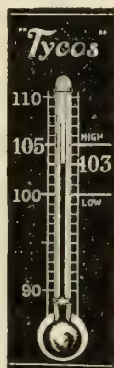

If You Are An Incubator User

would you to save a few cents on your thermometer—perhaps the cost of an egg in a valuable setting—risk spoiling that hatch and several more? Many enthusiastic poultry lovers have gone back to "Mother Hen" just because they could not depend on their incubators to bring off even a fairly good hatch. In many of these cases the incubators were not at fault. They were simply equipped with no account thermometers.

With a reliable thermometer, such as "Tycoo," you will not cook your chicks in the shell, or allow the eggs to be so chilled they will not hatch. A "Tycoo" can give you a chicken from every hatchable egg in almost any kind of an incubator.

Write for our book of "Thermometer Facts" today and you will appreciate more fully how essential a thermometer is to your better success in raising poultry.

Let a

Help You

If You Are An Incubator Manufacturer

you have a special interest in the thermometer you send out with your machines. If you make a high grade incubator, you cannot afford to run the risk of having your machines returned under your guaranty, and customers dissatisfied just because an unreliable, inaccurate thermometer has been used. Even if you make your first sale "stick" you run the chance of missing on repeat orders which are the cheapest and most desirable business to have.

If you make a popular priced incubator you cannot afford not to have an absolutely accurate and reliable thermometer.

We want every incubator manufacturer to write us about "Tycoo" thermometer within the next thirty days—better do it today. We can show you that you will be dollars ahead at the end of the year by doing so.

Taylor Instrument Companies Rochester, New York

Lee-Smith's Single Comb Rhode Island Reds

Strain vigorous, healthy and great layers. Eggs for hatching \$5.00 per 13, \$9.00 per 26. Utility \$10.00 per 100. Write for information.

C. P. NETTLETON, Shelton, Connecticut

RECORD BOOK FREE

It will show you how many eggs were laid today, how many chickens you are hatching, how many you raise and sell, and just what each hatch nets. Men who are succeeding in other lines of business keep such records. Why should not you, when we start you free?

Ertel's Poultry Diary has hundreds of money making pointers for the poultry man—how to have eggs and broilers to sell when prices are high—how to raise the heaviest fowls—how to take care of the flock—how to feed—how to treat sickness. The Diary tells about our new side regulators. They leave the top of the incubator entirely clear. Other improvements follow the suggestions of U. S. Department of Agriculture experts. We make low prices. We pay the freight. Get Ertel's Poultry Diary and watch the progress in incubator construction. It costs only a postal and may save you a mistake in purchasing an out of date machine. Better write us today. GEO. ERTEL CO., Quincy, Ill. Established 1867.

PULLETS

S. C. White Leghorns, Barred Ply. Rocks and White Wyandottes. Buy your pullets now when you can get the best of stock at little expense. Booklet and prices on application.

S. B. & E. W. TWINING, Box 42, Yardley, Pa.

HOT? COMPETITION? NEW YORK SHOW

It was the hottest competition ever brought together in WHITE WYANDOTTES, but that is what my birds want and why I won the big end of it. They have the habit! That's a feature you want in your flock, so as to be in the firing line, challenging all comers. I shall dispose of some fine breeders this summer and shall have for the fall fairs the choicest stock I ever had. If you want to be "in it" better take up the matter now. It is none too early to get a line on the best. Stock for sale at all prices. Write your wants to the breeder who has made possible the world's best flocks. Catalogue sent for 10 cents.

Arthur G. Duston : Box 1020 : South Framingham, Mass.

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale. Eggs for hatching from my regular matings at \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100; from exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

A. M. SHAW - **SUCCESSOR TO H. J. BLANCHARD** - **Box 997, GROTON, N. Y.**

WHITE and BUFF WYANDOTTES

Egg Laying and Prize Winning Strains. At the Vermont State Fair this season we won four first, three second and two third prizes. The poultry exhibit at this fair was said to be the largest ever seen in New England—over four thousand birds competing. This number does not include pigeons. The competition in the Wyandotte classes was very strong. It was worth while to win there. At the different county fairs we did, of course, even better. Eggs for hatching—White Wyandottes: Utility Stock, \$1.50 for 15 and \$6 per 100. From best pens, \$3 for 15 and \$10 per 100. Buff Wyandottes, \$3 for 15 and \$10 per 100. Send for circular. Please mention American Poultry Journal when writing.

The Famous "Bar-letts"

HOLD THEIR CLAIM, CHAMPIONSHIP WINNERS AT BUFFALO

BAR-LETTS
OWNED BY GEORGE W. HILLSON
AMENIA, N. Y.

First and Champion Hen at Buffalo, 1909

At the wonderful Buffalo Show, Feb. 1 to 6, 1909, George W. Hillson's Barred Plymouth Rocks made a phenomenal record against the best of the East and Central West by winning Four (4) of the possible Five (5) First Prizes, Third Cock, First Cockerel, First and Second Hens, First and Fourth Pullets, First Exhibition Pen, the New York State Challenge Cup for Best Cock, Hen, Cockerel and Pullet. My "Champion of Buffalo" First Prize Cockerel is a masterpiece in the art of breeding and is beyond question the greatest Barred Rock living. My Pullet "First Attempt," winner of Three (3) Specials, New York, 1907-08, is here First Hen and Champion Colored Female in the show. Her record is equaled by no other Barred Rock female in the world. My First Prize Exhibition Pen contains the grandest conformation of color in male and females of any exhibition pen that ever graced the showroom.

For sale: Birds that will reproduce themselves. Eggs from the grandest matings in the world, at prices within the reach of all. One setting, \$5.00; two settings, \$9.00; three settings, \$12.00; four settings, \$15.00. Fine illustrated circular free.

DON'T BUILD

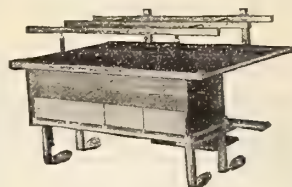

that new hen house or fix up the old one until you get our large new 100 pp. catalog (over 100 illustrations) telling all about Potter Poultry House Fixtures, Perfection Feed Hoppers, Simplex Trap Nests, feeds and supplies of all kinds. Potter Fixtures have been on the market over 8 years and are used by thousands of poultry keepers. They are complete, convenient and sanitary; made in 3 styles and 12 sizes to fit any hen house.

We now make the complete line of PORTABLE (K. D.) HOUSES, BROOD COOPS, PIGEON LOFTS, etc., formerly made by the Morgan Sanitary House Co., of Lemont, Ill. These are made in 20 different styles and sizes, and if you want a complete, up-to-date and cheap house or coop of any kind you should not fail to send for large illustrated catalog telling all about these goods.

DON'T KILL or sell your laying hens; use the POTTER SYSTEM and pick out the layers from the loafers and keep only healthy laying hens. The Potter System is the greatest discovery of the century in the poultry world and is used by over 25,000 poultry keepers. You can save dollars every year by using our system, because you keep only layers.

Our new 100 pp. book entitled "Don't Kill the Laying Hen" is a revelation to poultry raisers on the subject of laying and non-laying hens and egg production. Potter Poultry products are for Particular Poultry People, and if you are particular and want to make more money on your flock you will write today for our catalogs and circulars.

**JUNE LICE
MULTIPLY
RAPIDLY**

FOR YEARS we have kept our poultry houses free from lice and mites at a cost of 7c per year for each pen measuring 15 by 12 feet. One reason our hens are high record layers is, they don't have to fight lice and mites. If you, too, want layers and healthy fowls, use our method; it is the only safe, sane and sure eradicator of lice and mites at a low cost. For 20c, silver or stamps, we will mail you the recipe. It is worth dollars to anyone breeding poultry for profit. This is the best month to do the work, so write today to the largest Buff Leghorn farm in the world. Address

Morgan Poultry Farm, Route 6B, Beloit, Wisc.

VASS' Buff, Black and White ORPINGTONS

acknowledged the world best. Are you looking for eggs that will produce winners for next winter show? Remember, from setting of Black Orpington eggs I sold last spring a cockerel was hatched that \$100.00 was offered for this cockerel and the offer was refused. Remember my birds have won with different judges at America's leading shows like Pan American World's Fair St. Louis, Boston, Jamestown Exposition, Easton, Pa., and Madison Square Garden for the last nine years. They have stood the test for years and not only winning for me but in hand of many customers. A few choice large birds for sale reasonable. I am the oldest Buff Orpington breeder in the U. S. Egg orders booked now from the finest flock of Orpingtons in America. Write for prices. Booklet free. Satisfaction guaranteed. C. E. VASS, Washington, N. J.

**NOFTZGER'S PARTRIDGE
ROCKS**

Winners for me and my customers all over the United States. They will win for you, too. Send for catalogue of the greatest of all new breeds. Twelve grand pens mated. Ask any judge what he thinks of Noftzger's.

S. A. Noftzger Originator of Partridge Rocks Route 8, North Manchester, Ind.

**THE NORWICH AUTOMATIC
EXERCISER & FEEDER**

Saves just as much grain in summer as in winter. With grain at its present price you can't afford to run your yards without it. Try The Norwich Automatic Exerciser & Feeder on our guarantee, which relieves you from all risk, and reduces your feed bills 20 per cent. It pays for itself.

Combination**

American Poultry Journal } All Three
Western Poultry Journal } for
Farm-Poultry } **75c**
Regular price \$1.50

Farm-Poultry, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

Western Poultry Journal, published at Cedar Rapids, Iowa, is also in its 20th volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, now in its 40th volume, thoroughly covers the entire field of poultry literature, and make a poultry library in themselves.

**This is the Greatest Combination
Ever Offered by a Poultry Paper**

and is especially so when you take into consideration the fact that American Poultry Journal will during the coming season, publish one more of those handsome colored plates of poultry, which alone is worth the price of a year's subscription to any one interested in thoroughbred fowls. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

New Poultry Book

Origin and History of All Breeds of Poultry

WITH 198 BIRDS ILLUSTRATED IN COLORS

For years the needs and demand of poultrymen has been illustration of birds in natural colors. American Poultry Journal's new book "Origin and History of All Breeds of Poultry" furnishes illustrations in colors of all recognized varieties of chickens, turkeys, ducks and geese, both male and female.

The First Time

Never before in the history of the poultry business have all recognized varieties been pictured in colors and assembled in one harmonious uniform series of illustrations, perfect in shape, color, feather markings, uniform in size and correct in comparative proportion.

Origin and History

As time goes on and older breeders drop out the origin of different varieties is lost—their history obscure. In this book has been collected all the known reliable history, relating what cross matings produce present varieties and the names of the originators.

Mating of Breeds

The secrets of mating popular breeds are described, showing how success can be obtained

in producing show winners, and the greatest possible results in egg productions.

The Book Described

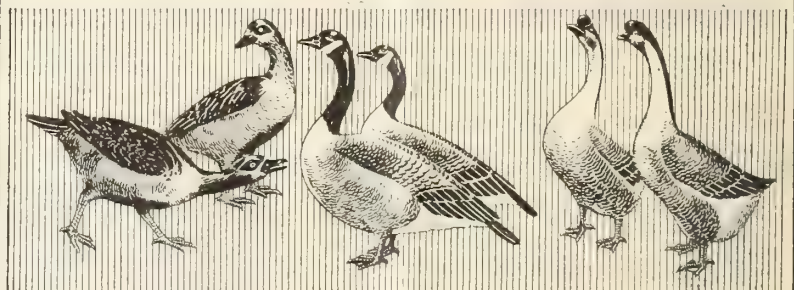

The book contains eighty pages and cover, size of page 9x12 inches. There are 198 colored illustrations of fowls, including male and female, of all recognized varieties of chickens, turkeys, ducks and geese, giving the origin and history and describing the best methods of mating to produce the desired results.

The illustrations were made by Mr. Samuel Stoltz who has proved by this work that he is the greatest all-round poultry artist in the world.

The articles are compiled from the writings of the best known, most successful breeders in the poultry business.

Introductory Price

Thousands of dollars and years of preparation have been put into this book. It is offered at the Bargain Introductory price of \$1.00 a copy, while in connection with one year's subscription to this paper it can be secured at a reduced price for the two as will be seen by the special offer below:

SOME QUALITIES OF THE BLACK MINORCAS.

A Breed Which Is Highly Valued for Its Many Practical Characteristics—Easily and Successfully Bred in Any Climate.

Written for American Poultry Journal by Geo. H. Northup, Raceville, N. Y.

For many years the Black Minorcas have been spoken of as the greatest of all egg producers, but very little has been said of them as table fowls, though quite a number of breeders have expressed the opinion that they are very much like the turkey for that purpose. They certainly resemble the turkey in color of flesh, which is white and of very similar quality. Many breeders have been prejudiced against Minorcas because they say their legs are black, but it is only the shanks that are black and they are never cooked. Who ever heard of anyone objecting to a turkey because its legs were dark, the same color as those of the Minorca. Anyone who has given Minorca fowls a fair test will readily admit that they are one of the best table fowls they have ever used. They average larger than the Wyandottes and nearly as large as the Plymouth Rocks, another point which has helped toward their recognition as a table fowl. We have in the Black Minorca a strongly bred fowl in which there is no other than pure Minorca blood, hence no foreign characteristics to be asserting themselves in later generations as they certainly would if there were a taint of foreign blood in them, no matter how remote. Further we have in the pure black Minorca a fowl which has all the prolificacy of a tropical breed, hardness which has been established by probably a hundred years' breeding of their ancestors in the varying climate of Great Britain, the United States and Canada and in the Rose Comb Blacks a variety whose small comb and wattles make them as well prepared to withstand the severity of extreme cold in northern climates as any variety of fowls in the world.

They are very much more profitable to breed than most other breeds of poultry and I might make it even stronger and say that they are more profitable than any other breed. Undoubtedly the average price paid for the entire product of Black Minorcas and their eggs to all producers, during the last four years is very much higher than the average for any other breed at any time. The price, \$1,000, at which one cock bird was sold with the positive proof that the full amount of \$1,000 in clean cash was actually received for that one bird, stands out alone in the history of high prices for poultry and the equally well proven facts that other Black Minorca hens and cocks have been sold at \$500, \$300 and \$200 each, and many others at \$100 each, and that three Black Minorca chicks were sold and delivered before they were twenty-four hours old for \$35 for the trio; also that many breeders are selling all the eggs their Minorca hens can produce at \$5, \$10, \$15 and \$25 per setting, shows that this breed has an unparalleled record for high prices and ready buyers. When such conditions exist in regard to anything which is offered for sale, it is because the demand is greatly in excess of the supply, and in the case of Black Minorcas the great demand is created by their superior egg-producing qualities and their money-making value. Every breeder of Black Minorcas knows that there is quick sale for the entire product of his fowls just as soon as they are ready to sell, so instead of being obliged to expend a large sum in advertising he has only to use a small card in any

poultry journal, to let buyers know his address, and what he has to offer. If anyone who has any Black Minorcas to sell, doubts this, let him try an ad in the next two issues of this journal, which come in the two dull months in the year for selling poultry, and I am sure he will be convinced that there is a quick market for Black Minorcas and their eggs at good prices.

To all Minorca breeders my advice is, that if you have not as many Minorcas as you can care for, by all means hatch as many as you can in June and July. Minorca pullets hatched any time in July will be laying about the same time in February if they receive just ordinary good care, because they mature very rapidly. Some of the most fancy Minorca fowls I have ever seen and handled were hatched in July, and Major, the Rose Comb cock which won second prize for me at the St. Louis World's Fair and first at Boston the following winter, was hatched during the first week of August. I refused an offer of \$500 in cash for him before I showed him at the World's Fair, because I felt that he was worth more than that to me in my breeding pen. If I must hatch all of my Minorcas in any one month I would select May as the most desirable month of the twelve, but I consider June a better month to hatch Minorcas in than March, and July is far superior to February. The July hatched Minorcas seldom get matured enough to show well until the February shows, but many of our very best winners in cocks and hens at all our best shows are Minorcas which began life in the month of July, and Minorcas which are hatched in February in any climate where winters are severe are at a disadvantage on account of having to pass their early life in close confinement to avoid cold so severe as to endanger or deprive them of life altogether, so that most of the limited number which live through, have not had the opportunity for free and full development from the start which the later chicks have, and they are thus handicapped for a long time if not permanently, so that very few ever grow the most perfect type. The difference in care for late chicks is that the protection needed by the later ones is to keep them from extreme heat instead of protection from cold, and artificial shade is much more effectual and easier to provide than artificial heat.

Both Rose and Single Comb Black Minorcas are sure to be in great demand this coming fall and winter and any breeder who can produce them will regret having left good eggs unhatched when his surplus of Minorcas are gone and buyers are anxious for more at good round prices.

MAKING A START.

Success in the poultry business largely depends upon making the right kind of a start. How often do we hear old breeders say, "Start right?" This is the best advice one could give for a right start is a long step toward success.

But what is meant by this? What is a right start? How shall we interpret the term, "Start right"? These are questions that puzzle every beginner in the poultry business, and no one can give an answer that will thoroughly cover the ground. There are doubtless many right ways of starting, ways that will lead to success; so in this article I am going to tell you a few things that I have learned from my own experience and observations among my friends starting into the poultry business.

When you make up your mind to become a poultryman your first step toward making a good start is to subscribe to two or three good poultry journals, such as the "American,"

as well as your local poultry paper. Study these thoroughly for a few months, learning all you can from them (which I found was quite a lot), and, in the meantime, get a good book or so telling of the different varieties. Also, if possible, attend one or two poultry shows and visit some up-to-date poultry farms, talking with old breeders and studying the different varieties.

Now carefully decide upon what variety you want to

Fourth White Plymouth Rock hen, Detroit, 1909. Bred and owned by Lyman H. Hill, Jackson, Mich.

breed (just one, for that is all you can manage well, for a while at least). No one can say what variety is best. The one that is best for one person may not be the best for you. The variety that most strongly appeals to your individual fancy, the one that is best suited to your particular needs and location, is the best fowl for you, and you can only determine what fowl this is after making a careful study of the individual merits of each. If you are going to make a specialty of egg production probably one of the Mediterranean breeds, such as the Leghorns or Minorcas, will suit you. If market poultry is your object one of the Asiatic breeds, such as the Brahmas, Langshans or Cochins, will fill

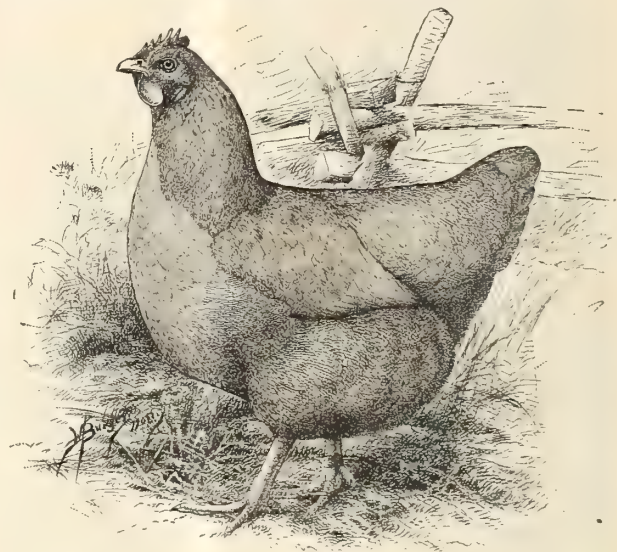

Second White Plymouth Rock hen, Detroit, 1909. Bred and owned by Lyman H. Hill, Jackson, Mich.

your requirements for large size and fine meat. However, the great general purpose American Plymouth Rocks, Wyandottes, Rhode Island Reds, etc., the English Orpingtons, as well as numerous other breeds, including various games and French fowls, cannot be excelled for fine quality of meat and quick maturity, and they are fine layers.
